

Cambridge City Council Meeting Announcement and Agenda Monday, July 1, 2024 at 6:00 PM

Cambridge City Hall, 300 3rd Avenue NE

Members of the audience are encouraged to follow the agenda. Agendas are available on the table just outside the Council Chambers door.

_		
Tentative		Agenda Item
Time		
6:00 pm	1.	Call to Order and Pledge of Allegiance
6:02 pm	2.	Approval of Agenda
	3.	Swearing in of Detective Johnson and Police Officer Gregorich
	4.	Consent Agenda
	A.	Approval of Regular City Council Meeting Minutes for June 17, 2024 (p. 3)
	B.	Draft May 2024 Financial Statements (p. 10)
	C.	Approve Road Closure for Steve's Tire 50 th Anniversary (p. 80)
	D.	Approve bid for replacement of CFD Command Vehicle (p. 90)
	E.	Approval for hiring one part time employee for Northbound Liquor (p. 98)
	5.	Work Session
	A. :	Stormwater Presentation (p. 99)
	В. 2	2024 Housing Study Presentation (p. 116)
	6.	Unfinished Business
	7.	New Business
	A.	Street Art contest at Art Fair (p. 316)
	8.	Mayor's Report
	A.	Summary of LMC Annual Conference
	В.	4 th of July Fireworks
	9.	Council Concerns
	10.	City Attorney's Report
	11.	City Administrator's Report
	A.	Call for Election Judges
	12.	Adjourn

Notice to the hearing impaired: Upon request to City Staff, assisted hearing devices are available for public use. Accommodations for wheelchair access, Braille, large print, etc. can be made by calling City Hall at 763-689-3211 at least three days prior to the meeting.

Unless otherwise noted, all meetings are at City Hall in Council Chambers

Cambridge City Council Meeting Minutes Monday, June 17, 2024

A regular meeting of the Cambridge City Council was held at Cambridge City Hall Council Chambers, 300 3rd Avenue NE, Cambridge, Minnesota, 55008.

Members Present: Councilmembers Lisa Iverson, Aaron Berg, Mark Ziebarth, and Bob Shogren.

Members Absent: Mayor James Godfrey

Staff Present: City Administrator Vogel, Police Chief Machin, Finance Director Moe, Community

Development Director Westover, Utilities/Public Works Director Schwab, Assistant Public Works Director Milz, Deputy Fire Chief Benzen, City Engineer Blank, and

Assistant to the City Administrator Seiberlich.

Call to Order

Berg called the meeting to order at 6:00 pm and led the Pledge of Allegiance.

<u>Citizens Forum</u>

Chris Hanson, 248 4th Ave NE. Hanson stated he drives a semi-truck that is valuable and he is not comfortable parking it in a public lot due to potential for vandalism and break-ins. He would prefer to park the semi in his driveway, which is an impervious surface and does not block the sidewalk. The semi is only parked Friday through Sunday evening, or rarely through Monday morning before 5:00 am. He states he pays taxes on his land and feels he should be able to park there as well. The only time the semi would be parked on the street is if other vehicles are being moved or washed. He stated he has friends that live within city limits and they park their semis at their house, and he was told many school bus drivers park their bus on city street. Hanson requested the ordinance be more lenient and allow him to park his semi in front of his home.

Patti Smith, 220 21st Ave SW. Smith noted she supported Hanson parking at home. Smith went on to say she was opposed to City Hall being closed due to bad weather. She was not opposed to opening late to allow for plows to come through, but to close for a full day is excessive. She felt the city needed specific guidelines for closure due to weather. She said she has lived life in North Dakota and Minnesota her entire life, and felt North Dakota blizzards are worse than those she has experienced in Minnesota.

No one else approached. Berg closed the forum at 6:09 pm.

Approval of Agenda

Vogel noted a grammatical error to Item 5A "Cambridge Shores" Parks Master Plan Presentation by SEH. Where SEH was inadvertently autocorrected to SHE.

Shogren moved, seconded by Ziebarth, to approve the agenda. All voted aye, no nays, motion passed unanimously.

Consent Agenda

Iverson moved, seconded by Ziebarth, to approve consent agenda Items A-J:

- A. Approval of Regular City Council Meeting Minutes for June 3, 2024
- B. Approve Warrants 129186-129421 and ACH/Wire items totaling \$2,020,724.08
- C. Approve Sister City Commission Appointments
- D. Resolution R24-043 Approve Inter-fund Transfers
- E. Approve Road Closure for 7th Annual Cambridge Arts & Crafts Fair
- F. Approve R24-044 Application for Payment #1 from Douglas-Kerr for 2024 Street Improvements
- G. Approve R24-045 Application for Payment #6 from Douglas-Kerr for Well No 9-Contract B
- H. Approve Service Plan Agreement for State Plan Review with Chris Kearney
- I. Approve R24-042 Interim Use Permit for Fowl-1463 Roosevelt St. S.
- J. Approve R24-046 Accept Restricted Donation for the Police Dept

Upon roll call, Shogren, Ziebarth, Berg and Iverson voted aye, no nays. Motion carried unanimously.

Work Session

A. "Cambridge Shores" Parks Master Plan Presentation by SEH

Vogel introduced SEH representatives Karl Weissenborn and Virginia Torzewski, who would be presenting a high-level concept of the Cambridge Shores Park as requested by Council. This is an informational presentation at this time, with further discussion as additional information is discovered. Vogel requested Council feedback on what they would like to see included or excluded from the concept.

Karl Weissenborn, senior landscape architect for Short Elliot Hendrickson, Inc. (SEH) introduced Virginia Torzewski, graduate landscape architect on his team. Weissenborn said last fall they participated in a field walk of the proposed area. They were impressed by the canopy of pine and oaks, the significant ridgeline on the lake, the Native American burial mound, and the mix of wetland vegetation and fields. A site evaluation was created to best determine the characteristics and best recommendations for the park. The agricultural field to the west is slated to be a residential development which could be done in conjunction with the park development.

Weissenborn continued, four concepts were created, and the best features from each were developed into one final concept. There is a proposed wetland area in the center of the park, the established area of trees would be protected and preserved, and the Native American burial mound would have a 200-foot buffer. This is approximately 35 acres of parkland.

Weissenborn described the best features proposed through the analysis process. They include a 200-stall parking lot using typography to create a runoff detention pond, an open space including room for a future amphitheater, a 8,000 square foot playground with range of play for different age groups and an adjacent restroom, a ribbon of paved trails throughout the park with minimal clearing to preserve the woodland, a 500-person event center on the bluff above the lake, a swimming beach, a kayak rental booth with attached restroom, a boardwalk over the wetland area to the north of the beach, 50-foot vegetation buffer surrounding park for future homes, the northern corner would be a native planting area with open meadow, and a connecting trail to Opportunity Blvd to the west. Also on the concept map is a logical area for the park entrance.

Vogel said the park is planned to be low impact use, with the exception of the beach. The vision is for a peaceful area with only 300-feet of shoreline disturbed during the project. It would be a park that has all biomes: forest, meadow, wetlands. The core pieces Council requested were a swimming beach, and a regional hub space that could host weddings, prom, etc. The idea is a facility big enough for 500 seated people with a two-sided patio overlooking the water. This led to the idea of the bridge over the wetlands, which could be an enclosed, farm-house style bridge.

Shogren asked for clarification on the buffer around the burial mound, Torzewski said no structures could be built within the buffer as to not disturb the mound. This also helps protect the mature pines.

Shogren mentioned the boat landing that had been previously discussed, Vogel said that idea had been discarded. The grade of the south shoreline is steep, there would need to be an additional parking lot, and approximately 200-feet of cattails would need to be removed. The DNR would most likely object to that, though they have been supportive of importing sand for the beach. A boat landing on the northern side was explored, but there were grade issues and mature trees in this area, and a separate storm pond and parking lot would be needed. Additionally, the first 50 feet of the lake is only five feet deep, so it would need to be dredged and maintained. Vogel asked if Council would like to see that added into the concept, Shogren said no.

Iverson asked if parking could be moved closer to event center for elderly and handicapped. Vogel said there is an access drive to the building for caterers and musicians and could be used to drop off those in need. Weissenborn said code would most likely require an accessible parking lot in close proximity, and suggested adding a small lot near the building.

Weissenborn highlighted the estimated cost of the major categories, noting there were itemized phases that could be adjusted, and the estimated costs had a high and low range. The event center was estimated at \$4 million, a lower-level theater to rent out would add an additional \$2.4 million. The kayak rental building and restroom were \$750,000, playground restroom was estimated at \$210,000, the picnic shelters were approximately \$125,000, and the amphitheater came in around \$500,000.

Weissenborn continued, site grading was estimated at \$650,000, trails would be \$150,000, there would be two phases for the parking lot at \$375,000 and \$425,000, the wetland bridge was approximately \$150,000. The estimated costs of all park buildings is \$7.9 million, park site development is \$1.9 million, and the features and amenities are \$700,000. The estimate for the full concept is about \$14.5 million.

Vogel said staff recommend a buildout of the second level of the facility only be considered if partners were included, this would reduce the cost by \$2.4 million. The estimate includes a full commercial kitchen, but this is likely unnecessary and a prep kitchen would be sufficient. This brings the project cost down to approximately \$12 to 12.5 million dollars.

Shogren asked what the next step would be, Vogel replied the next step is to continue discussions over time, this is part of a broad development and project where staff continue to work with development partners to help with the land purchase component. Staff will be developing financing strategies and exploring all options for the land purchase and site development that would not impact the levy, such as grant opportunities. The League of Minnesota Cities has a Grant Navigator Program that helps identify available grants. There would be some impact on the levy for maintenance and added staff.

Berg asked if this information was available to the public, Vogel said the information presented at the meeting was available in the packet published to the city's website.

Unfinished Business

A. Cambridge Airport North Apron Reconstruction Bid Approval and Professional Services Agreement Milz said bids for the reconstruction project closed on Tuesday, May 28, 2024. The low bid was from New Look Contracting, Inc. in the amount of \$361,951.00. Also included is an agreement for professional services for SEH construction oversite for \$54,700.00. Both are Federal funding eligible, so the city only covers 5% of the cost.

Berg motioned, seconded by Shogren, to award the 2024 North Apron Reconstruction project to New Look Contracting, Inc. for the amount of \$361,951.00, and the agreement for SEH professional services in the amount of \$54,700.00. All voted aye, no nays, motion passed unanimously.

New Business

A. Street Reconstruction and Overlay Plan for 2025-2029

Moe said the street project in 2025 covers mainly South Main St. There are not significant assessments for the project, which forces the city to consider a different type of bonding authority for the project, staff recommend Street Reconstruction Mods. The plan shows to-be-determined funding for future years, as staff do not anticipate needing street reconstruction bonds for those years.

Shogren asked why Central Ave. between Main and Fern St., and Fern St., would not be assessed. Blank answered they are proposed to be assessed but it is only a small portion of the entire project.

Public Hearing

Berg opened the public hearing at 6:44 pm.

Patti Smith, 220 21st Ave SW. Smith questioned how this project would affect property taxes. She mentioned the city funding \$400,000 to buydown interest rates for local business loans, and that property taxes are already high. She said the streets projects were listed, but the packet did not provide details on the scope of the work being done. Berg recommend that Smith generate a list of her questions and contact Administrator Vogel to get her questions answered.

No one else approached to speak.

Berg closed the public hearing at 6:49 pm.

Shogren motioned, seconded by Ziebarth, to approve R24-047 Adopting the Street Reconstruction and Overlay Plan for 2025-2029. All voted aye, no nays, motion passed unanimously.

B. Approve R24-041 Variance- Exterior Material- 503 Cleveland St S.

Westover presented a variance request from owners of 503 Cleveland St. S. The request is for a variance from City Code Section 156.088 Exterior Building Wall and Roof Finishes to allow metal siding. Currently the business has an IUP for storage pods, with phases set every two years to remove two pods and build two new structures. This is part of the first phase, and the storage pods need to be removed by the end of the year.

Westover continued, the proposed structures would be on the southwest side in the middle of existing storage units, which have metal siding and roofs. The existing structures would be built to stay in character with the existing structures. Staff feel this is reasonable, as the buildings are along Railroad St. S. which is unimproved and not easily visible to passing traffic. It is noted the second phase of buildings would be improved with brick or stone as a wainscoting along the bottom, and are easily visible along Clevland St. S.

Westover noted the Planning Commission recommended approval of the resolution.

Iverson motioned, seconded by Ziebarth to approve Resolution R24-041 to allow for a variance of exterior materials.

Shogren asked if the applicants were in compliance with paving and adding curb and gutter to the area of storage pods, Westover said a variance was granted with the IUP due to the removal plan. Shogren asked if paving and curb and gutter would be constructed with the new units, Blank replied there already is curb and gutter in place, and the area will be paved.

Berg asked if the requirement for brick or stone on future buildings was included in resolution to ensure it gets done in the next phase. Westover said it was not included, as it was considered a separate item. These buildings are in the middle of the other structures, while the future buildings are in a separate area that is more visible. Westover noted it could be added if Council requested. Westover suggested that if a variance was brought to Council for phase two requesting all metal, they can refer back to the notes stating they agreed to add improvements and chose to deny the variance request at that time. Shogren asked if this was discussed during the Planning Commission meeting, Ziebarth said there was conversation on details of the project, but he did not remember if that was discussed in detail.

Berg noted that storage businesses historically change ownership frequently and was concerned that this would not be enforced with new owners without documentation. Vogel asked if the change to the other structures were required by code or a preference staff would like to see by design standards. Westover replied it was a code requirement. Berg suggested adding a condition that required design standards that must be met by a set date. Westover said meeting code would be difficult, by design storage units are 80 percent metal doors, which makes it impossible to meet the 50 percent code requirement. Staff have been considering proposing an ordinance change to allow some flexibility for storage units because it is impossible to meet the 50 percent requirement. Vogel asked what would trigger the design element change, such as a timeline or another request. Westover said it was due to other requests for them, the property to the north also requested a variance for storage units, and staff worked with them on a design that attempted to meet the exterior material requirements. Vogel said if a condition was added to the resolution, it would need to be clear, with a set timeline to meet set standards.

Westover reiterated she felt this is separate issue, if the business requested another variance in two years they could also request this resolution to be amended if they cannot meet the exterior material requirement. At that point it would be up to the Planning Commission and Council to say no if it desires stone or brick.

Iverson stated her motion stood as-is.

Upon vote, Iverson, Ziebarth and Berg voted aye. Shogren voted nay. Motion carried 3/1.

C. Approve Ordinance 787 Auto-Oriented Uses and tire changes

Westover said current city code requires all repair of vehicles to be conducted within a building except for tire inflation, changing wipers, or adding oil. After requests and staff review, an amendment to allow changing the tire and tire repair is proposed. Staff find changing or repairing a tire to be a quick, unobtrusive, minor repair for an auto repair business, leaving service stalls open for major repairs that take longer.

Vogel noted some large vehicles that do not fit in a bay were having tire changes done on street and in private lots, which is not allowed. Some of the repairs included city vehicles. This proposed change allows establishments to use their private lots for these repairs.

Ziebarth motioned, seconded by Shogren, to approve Ordinance 787 Auto-Oriented Uses and tire changes as presented and allow staff to publish a summary ordinance. All voted aye, no nays, motion passed unanimously.

D. Approval of work to the Cambridge Library

Vogel said on June 3rd there was heavy rainfall that caused flooding in the lower level of the Cambridge Library. It is believed this was caused by pooling external water leaking through the foundation. The proposal by T&T Waterproofing and Drain Tile, for the amount of \$17,705, includes drainage improvements to the building to prevent further water intrusion issues. This money would come from the Library Capital Fund, which has \$100,000 set aside for repairs.

Shogren verified the repair covered the corner on 1st Ave. and Dellwood, and did not include the lower terrace. Vogel said that was correct. Shogren noted the last water intrusion came from the windows in that area and asked if there was a plan to correct the issue. Vogel said he believed there has not been additional water intrusion from the windows since the one episode, nor has water built up in the west side sump pump. The location with the issues is a specific break room, a storage room, and a utility room, all located on the corner at Dellwood and 1st Ave.

Shogren motioned, seconded by Berg, to approve the work for the Cambridge Library, totaling \$17,705 as quoted by T&T Waterproofing and Drain Tile, Inc. All voted aye, no nays, motion passed unanimously.

E. Approve Contract with On-Call Cleaning Services

Vogel said the city is seeking a backup, on-call cleaning service to cover cleaning when staff is unavailable. There is one staff member that does all maintenance and cleaning, and one backup cleaner who is not always available. An RFQ was published twice and one quote was received from Squeaky Services.

Iverson motioned, seconded by Shogren, to approve the contract with Squeaky Services for on-call cleaning at the quoted rate of \$33.00 per hour.

Berg asked if there were an estimated amount of hours the service would be used each year, Vogel said it depends on staff time off and he was unable to predict usage.

Upon vote, all voted aye, no nays. Motion passed unanimously.

Mayor's Report

No Mayor's Report

Council Concerns

No Council concerns

City Attorney's Report

No City Attorney's report

City Administrator's Report

Vogel announced today was the last council meeting with City Engineer Blank. Blank has been the city engineer for 28.5 years, starting in November of 1995. In that time, he has provided tremendous civil engineering services and valuable prospective. He has excelled at helping the city continue, maintain, and advance one of its core pillars, focusing on infrastructure and safety. Over the past 3.5 years, Vogel said, Blank has taken the time to teach him the city's history, about its infrastructure, and where and how expansion might occur. They have worked together on several projects, including a bond request for Hwy 95, the downtown restoration and revitalization project, and the initial phases of the Cambridge Shores project. Many staff members have worked with Blank for the past 20 or more years, and they all have had positive experiences with him. Vogel expressed appreciation of Blanks hard work for the city.

Blank said Councilmember Ziebarth seconded the motion in 1995 to appoint him as city engineer. Blank said he has been with SEH for 37 years, and started working in Cambridge in 1992 when they were building the Hwy 65 bypass, Walmart was not yet built, nor the whole east side of the city, and utilities were being installed for the yet-to-be-built Community College. Blank said it has been a pleasure to work for the city.

Vogel noted the League of Minnesota Cities conference is next week. This is a posted event, there will be three Councilmembers attending, and city business will be discussed but no votes taken.

Adjournment of Council Meeting

Being no further business before the City Council, Ziebarth moved, seconded by Shogren, to adjourn the regular meeting at 7:14 pm. All voted aye, no nays, motion passed unanimously.

Prepared by: Caroline Moe, Director of Finance

Background

Attached for your review are the <u>Draft</u> Monthly Financial Reports for the five months ended May 31, 2024. Included in the Monthly Financial Reports are the following components:

Financial Snapshot

Outstanding City Debt

General Fund - Amended 2024 Budget Compared to Actual **Special Revenue Funds:**

Airport Operating Fund – Adopted 2024 Compared to Actual **Debt Service Fund Summary:** Adopted 2024 Budget Compared to Actual

Capital Fund Summary:

Adopted 2024 Budget Compared to Actual

Enterprise Funds:

Water Utility - Adopted 2024 Budget Compared to Actual Wastewater Utility - Adopted 2024 Budget Compared to Actual Stormwater Utility- Adopted 2024 Budget Compared to Actual Street Light Utility- Adopted 2024 Budget Compared to Actual Liquor Store - Adopted 2024 Budget Compared to Actual.

Cash and Investment Summary

Park Expenditure Breakdown Report

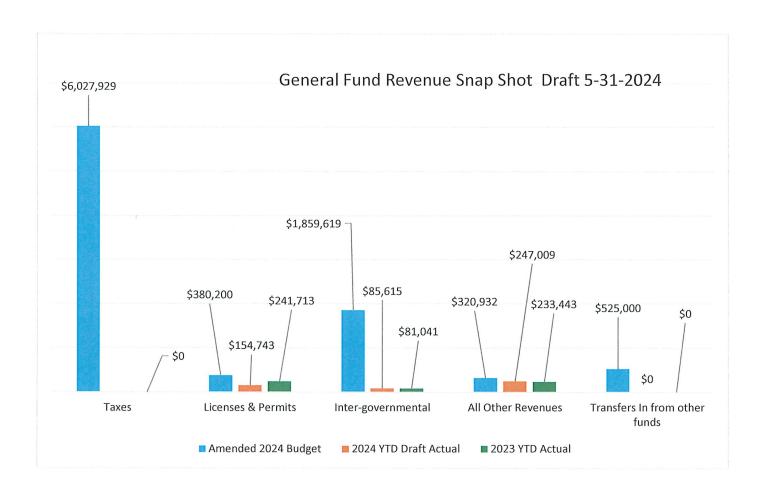

Compatibility with Strategic Goals:

Regular financial reporting to the City Council supports core strategy #5—Foster engaged, informed, and involved citizens and community, specifically related to the strategic objective of build trust with the community by maintaining clean audits, clear communication and transparency. Routine publishing of monthly financial statements provides transparent updates on the City's financial condition.

Council Action Requested

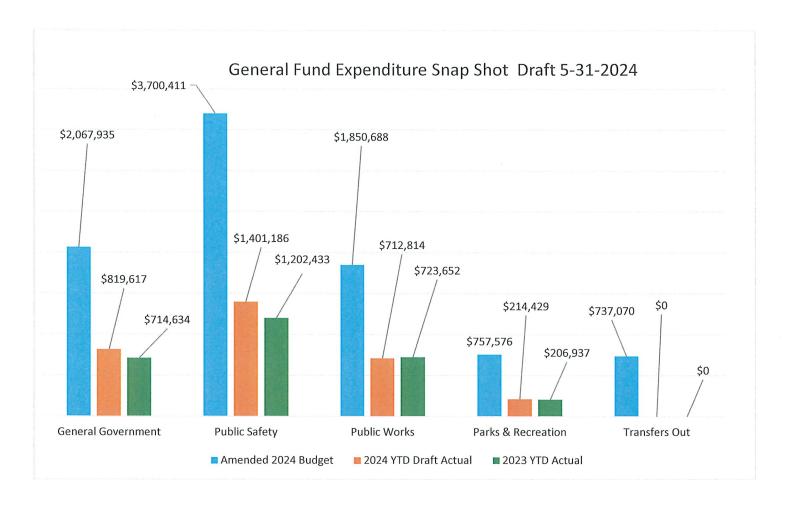

NONE REQUIRED - For discussion only.

Council Financial Snapshot

Notes-

- Tax collections occur in July and December. Normal to have \$0 at this point in the year.
- Permit activity is lacking behind expectations. A budget revision will be brought to Council in July to bring down the budgeted permit amount.
- Inter-governmental revenue is primarily received in July, October and December.
- Other revenue is higher than previous years as township fire contract billings were higher than prior year settleup provisions. Rest of other revenue will come in over remainder of the year.
- Transfers from other funds typically occur later in the year.

Notes—Expenditures for all categories, except Public Works, are higher due to implementation of class and comp study in 2024. Public Works regular salaries are higher in 2024 than 2023 due to the class and comp study but overtime related to snow plowing and cost of snow removal materials are down significantly, as compared to 2023 due to minimal snow events in 2024.

Behind the numbers—

16/2

Cambridge is protected by sixteen full-time police officers supported by two office staff professionals. We also employ part-time police officers to help cover shift vacancies that occur. The Police Department has the largest expenditure budget within the City.

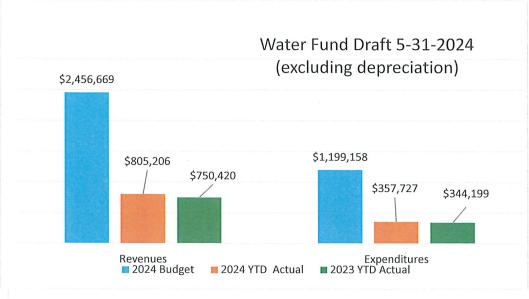

Behind the numbers—

57/6

Cambridge maintains fiftyseven miles of streets with six snow plows, two loaders, and two sidewalk machines. The Street Dept plows when two inches or more of snow is received. The Street Dept also sands/salts when conditions are slippery. To report street concerns, call 689-1800. Behind the numbers—

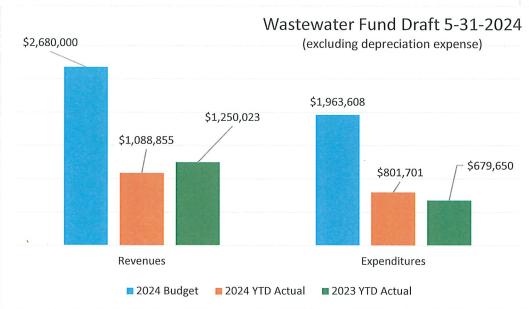

18

Cambridge has eighteen parks. Park locations and amenities can be found on the City's website at www.ci.cambridge.mn.us

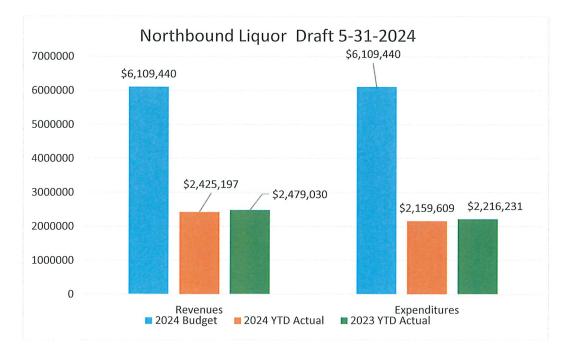

Water Fund Notes— Revenue as expected for 2024.

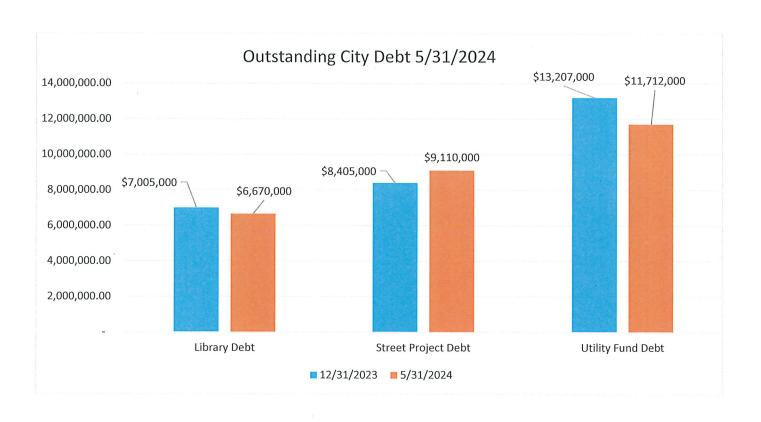

Increase in expenses due to implementation of class and comp study.

Wastewater Fund
Notes—
Revenues are down over
prior year due to sewer
access charges. In 2023,
new development had
sewer access charges.
Similar development, not
occurring in 2024 at this
time.

Northbound Liquor revenue and expense on track for 2024 at this point.

Prepared by: Shawn Machin - Chief of Police

Background:

Steve's Tire is holding a 50th Anniversary celebration. The event will occur on July 26th. They are requesting that the following section of roadway in the downtown area be closed for the event that will be held.

- Main St N between 2nd Ave and 3rd Ave

They are requesting that the roads be closed between the hours of 9am - 3pm (or once cleanup is completed). The event is scheduled from 10am-2pm.

Recommendation:

I recommend that the roads be allowed to be closed to facilitate the 50th Anniversary celebration of Steve's Tire.

Compatibility with Core Strategies and Strategic Objectives:

- #2- Deliver Exceptional Public Services
- #3- Connect opportunities to facilitate thriving commercial and industrial sectors
- #5- Foster engaged, informed, and involved citizens and community
- #6- Enhance the City's presence as a regional hub
- #7- Provide diverse amenities for a high quality of life

Fiscal Note:

- Road Closure Request Packet

REQUEST FOR STREET CLOSURE

INSTRUCTION SHEET

PLEASE READ THE FOLLOWING INSTRUCTIONS CAREFULLY AND PROVIDE ALL REQUESTED INFORMATION IN THIS PACKET.

INCOMPLETE REQUEST PACKETS OR MISSING ITEMS WILL RESULT IN AN AUTOMATIC DENIAL OF YOUR REQUEST.

REQUESTS MUST BE SUBMITTED AT LEAST <u>THREE WEEKS PRIOR</u> TO THE DATE OF THE STREET CLOSURE. THIS PROVIDES TIME FOR REVIEW BY CITY STAFF AND APPROVAL BY THE CITY COUNCIL AT A COUNCIL MEETING.

- Read and INITIAL the <u>Street Closure General Requirements</u> form.
- 2. Complete all sections of the <u>Request for Street Closure</u> form and SIGN the form at the bottom.
- 3. Read and complete the <u>Release and Indemnification Agreement</u> form. INITIAL all sections as required on the form. Print your name, sign and date the form, and have the form NOTARIZED.
- 4. Complete the top section of the <u>Approval for Street Closure by Residents and Businesses</u> form. Meet with ALL residents and businesses located within the closure area and have them provide their name, address, business name, and signature.
- 5. Return the fully completed packet with all forms to the Cambridge Police Department.

Below is a checklist for your use to ensure that you have completed the packet.

I have read and initialed the <u>Street Closure General Requirements</u> form.

I have completed all sections of the <u>Request for Street Closure</u> form.

I have signed the <u>Request for Street Closure</u> form.

I have read, completed, and initialed all sections of the Release and Indemnification Agreement form.

I have signed the Release and Indemnification Agreement form and had it notarized.

I have completed the top section of the Approval for Street Closure by Residents and Businesses form.

I have had all residents and businesses located within the closure area provide their name, address, business name, and signature on the <u>Approval for Street Closure by Residents and Businesses</u> form.

STREET CLOSURE GENERAL REQUIREMENTS

- To request a street closure for a neighborhood party, street dance, parade, or special event, please complete a Street Closure Request packet. Packets must be submitted to the Police Department a minimum of three weeks prior to the planned event to provide time for review by city staff and approval by the city council at a council meeting.
- Street closures can only be conducted on low-volume residential streets, dead-end streets, or cul-de-sacs. No thoroughfares or collector streets may be used, unless the street closure is for a City-Wide function and an exception is granted by the City Council. In addition, access to public facilities shall not be blocked. Road closures will only be granted upon determination that the closure will not have adverse effects on the safety and general welfare of people in the City and the function of the roadway.
- All residents and businesses on the street or block for which the event is planned shall approve the street closure by signing the Approval for Street Closure by Residents and Businesses form.
- Barricade equipment is required and can be provided by the City. A \$50.00 damage deposit is required and is refunded to the applicant after the barricades have been returned in good 4. condition. Barricades may be picked up at the Public Works Building the last working day before the event by 4:00 pm and returned to the Public Works Building the first working day after the event by 4:00 pm. Barricades for the event may also be delivered to a pre-arranged location by Public Works. As an alternative, the applicant may rent barricade equipment from a vendor. In any case, setup and takedown of the barricades shall be the responsibility of the applicant.

In addition to barricade requirements:

- a. No stakes or penetration may be made through the asphalt.
- b. The barricades used must be easy to remove.
- c. The barricades must be noticeably visible during daytime hours and evening hours.
- d. No penetration by stakes, poles, posts in or behind a boulevard without first checking with Gopher State One Call at (651) 454-0002
- e. No disposal of anything in storm sewers.
- f. Any marking on the street can be done in chalk or washable material. No paint or permanent markings can be used.
- A minimum twelve-foot (12') aisle must be maintained in the street to permit passage of emergency vehicles or vehicles of residents unless an exception is granted by the City Council for a City-Wide event. Failure to maintain a twelve-foot aisle during the entire period of the event will result in denial of requests for subsequent street closures. Law enforcement personnel will monitor the event for strict adherence to this rule.
- Adult supervision must be maintained at all times during the event. The City is not responsible for damages or injuries incurred in connection with or as a result of the event. The applicant will be required to sign a hold-harmless agreement. The applicant(s) agree(s) to indemnify and hold harmless the City of Cambridge, Minnesota, its agents and employees from any and all claims, demands, actions or cause of action of whatsoever nature or character arising out of or by

reason of, the conduct of the block party in any respect, including, but not limited to costs, attorney's fees, expenses, etc., incurred in connection with the defense or settlement of any claims for injuries or damage resulting from or connected with the block party.

For City-sponsored functions the City will cover the event under its liability insurance (Downtown Customer Appreciation Day, Snowflake Parade).

- 7. Applicant shall be responsible for the pick-up of trash and garbage immediately after the end of the event.
- Streets may not be barricaded later than 10:00 p.m. unless the street closure is for a City-Wide function and an exception is granted by the City Council.
- 9. No residents of the area designated shall be denied access to the event.
- 10. No loud speaker system shall be used which is audible beyond the block designated for the party. Residents and guests shall be in compliance with public peace statutes and ordinances.
- 11. The City of Cambridge reserves the right to approve or deny any request, or to revoke approval of any request.

Heidi > **iMessage**

Good morning, Heidi! Chris Miller here. We would like to close Main Street on Friday, July 26 from 9:00am-3:00pm for the Steve's Tire 50th Anniversary Celebration! I will send you a poster. We need your approval for the closure. Would it be OK for your customers to enter from 2nd Avenue during that time. We would love to have you join us for this celebration. If we have your permission, please reply with your consent to this message! Thank you so much, and enjoy this day. Steve and Chris Miller

206 Main Street No., Cambridge, MN **763.689.1544**

Prepared by: Ross Benzen, Deputy Fire Chief

Background:

The Cambridge Fire Department Deputy Fire Chief was involved in a vehicle crash back on May 23. Unfortunately, the vehicle has been totaled by our insurance company. After research, we have located a 2024 Chevrolet Silverado to replace the totaled command vehicle. Prices included in this bid are for the vehicle, graphics, and emergency lighting.

Vehicle: \$50,466 Graphics: \$1,265

Emergency Lighting: \$8,653.80

TOTAL: \$60,384.80

FISCAL NOTE: Funds would come from insurance payout and our self-insurance budget.

Strategic Plan Connection: This request is consistent with core strategy #2—deliver exceptional public service with an emphasis of providing proper equipment to effectively and safely perform job duties.

Recommendation: Approve the bid to replace the CFD Command Vehicle as presented.

ADDITIONAL TERMS AND CONDITIONS OF THIS VEHICLE PURCHASE CONTRACT

- 1. Definitions: As used in this CONTRACT, "YOU" or "YOUR" means the buyer and co-buyer. "I", "ME", or "MY" means the seller or dealer, "VEHICLE" means the car, truck, or other vehicle described on the front of this CONTRACT including all the options listed. "Manufacturer" means the company which makes the VEHICLE. "Trade-In" means the vehicle that YOU trade to ME in partial payment for the VEHICLE.
- 2. Purpose: By signing the CONTRACT, YOU agree to buy the VEHICLE from ME. By accepting this CONTRACT, I agree to deliver the VEHICLE to YOU if the VEHICLE is in my inventory. If the VEHICLE is not in my inventory, I agree to order it from the Manufacturer. After receiving the VEHICLE from the Manufacturer, I agree to deliver the vehicle to YOU.
- 3. Price Changes by the Manufacturer: The VEHICLE price stated on the front of this CONTRACT is based on the current price the Manufacturer charges ME. At any time before I receive the VEHICLE, the Manufacturer has the right to raise the price it charges to ME. If the Manufacturer does raise the price, I may raise the price to YOU by the same amount. If I do raise MY price, YOU may cancel the CONTRACT and get back any downpayment YOU have made. If I have not already sold the Trade-In (See Paragraph 4), YOU may have the Trade-In back by paying ME the reasonable cost of storage and any repair work or reconditioning I may have done.
- 4. Trade-In: If YOU are using a Trade-In to partially pay for the VEHICLE, YOU may deliver the Trade-In to ME either when YOU sign this CONTRACT or when the VEHICLE is delivered to YOU. If YOU do not deliver the Trade-In to ME when YOU sign this CONTRACT, YOU agree that at the time YOU deliver the Trade-In, I may reinspect the Trade-In and lower the allowance stated on the front of this CONTRACT. If I do lower the allowance, YOU may cancel this CONTRACT and get back your cash downpayment. If YOU deliver the Trade-In when YOU sign this CONTRACT, I may sell the Trade-In at any time and at any price I think proper. If this CONTRACT is cancelled and I have already sold the Trade-In, I will pay YOU the price I received for the Trade-In minus 15% commission, minus any money I spent repairing, storing, insuring, or advertising the Trade-In, unless otherwise required by Jaw.

When YOU deliver the Trade-In to ME, YOU guarantee that YOU own the Trade-In free and clear and agree to furnish proper proof of ownership, including the Certificate of Title. If any outstanding security interests are attached to the Trade-In vehicle, YOU are obligated to satisfy the debt secured and to obtain a release of all liens. If I arrange payment of the debt, and the total amount is greater that the amount shown on this CONTRACT as the balance owing to lienholder, YOU agree to pay the difference to ME in cash immediately upon notice of the deficiency. If the debt is less than the amount shown, I will refund the surplus to YOU.

- 5. YOUR Refusal to Take Delivery: Unless YOU cancelled this CONTRACT under paragraphs 3 or 4, I will retain the cash downpayment YOU gave ME as an offset to MY damages if YOU refuse to complete the purchase. YOU are also responsible for any other damages which I may incur as a result of YOUR failure to perform YOUR obligations under the terms of this CONTRACT. If YOU have delivered the Trade-In to ME when YOU signed this CONTRACT, I may retain the Trade-In and sell it to reimburse MYSELF for the expenses of repairing, storing, or reconditioning the Trade-In and for other expenses or losses I may incur as a result of YOU failing to perform YOUR obligations under this CONTRACT.
- 6. Design Changes by the Manufacturer: The Manufacturer has the right to change the design of the VEHICLE, its chassis, its parts or accessories at any time without notice to YOU or to ME. In the event of a change in design, I have no duty to YOU except to deliver the VEHICLE as made by the manufacturer.
- 7. Delays in Delivery: I am not responsible for delays in delivery caused by the Manufacturer, or by accidents, fires, or other causes beyond MY control. I do not control the Manufacturer and am not part of the Manufacturer and do not work for the Manufacturer.
- 8. Taxes: The price of the VEHICLE does not include federal or state taxes or any other tax or governmental fee. YOU must pay ME the proper amount of any tax or governmental fee which applies to this sale.
- 9. Pollution Control Certification: I certify to the best of MY knowledge that the pollution control system on the VEHICLE including the restricted gasoline pipe has not been removed, altered or rendered inoperative.
- 10. New VEHICLE Disclaimer of Warranties: If YOU are buying a new VEHICLE, the VEHICLE will come with a Manufacturer's warranty which is a promise from the Manufacturer directly to YOU. Unless otherwise agreed in a separate document (see Paragraph 12 below), I expressly disclaim all warranties, express or implied, including any implied warranty of merchantability or fitness for a particular purpose. I sell the VEHICLE "AS IS" and make no guarantees of any kind about the VEHICLE's quality or performance. YOU have complete responsibility and all the risk for any problems with the VEHICLE.
- 11. Used VEHICLE Disclaimer of Warranties: Except as may be provided in the Buyer's Guide Window Form and a separate warranty document (see Paragraph 12 below), if YOU are purchasing a used VEHICLE, I expressly disclaim all warranties, express or implied, including any implied warranty of merchantability or fitness for a particular purpose. I sell the VEHICLE "AS IS" and make no guarantees of any kind about the VEHICLE's quality or performance. YOU have complete responsibility and all the risk for any problems with the VEHICLE. I do not guarantee that the VEHICLE will pass an exhaust emissions inspection.
- 12. Dealer Warranty or Service Contract: If I give a warranty on a used VEHICLE or YOU and I enter into an extended service contract on a new or used VEHICLE, I may not disclaim implied warranties of merchantability or fitness for a particular purpose.
- 13. Used VEHICLE Window Sticker Form: If YOU are purchasing a used VEHICLE or a demonstrator, the information YOU see on the window form for this VEHICLE is part of this CONTRACT. Information on the window form overrides any contrary provisions in the CONTRACT of sale. [La information que aparece en la ventanilla de este vehiculo forma parte de este contrato. La informacion contendida en el formularion de la ventanilla anula cualquier prevision que establezca lo contrario y que aparezca en el contrato de venta.]

Prepared by: Tina Davidson

Background: I'd like to hire one additional part time cashier at Northbound Liquor to work an average of 10 hours per week. Hiring an additional cashier would be very beneficial in these busy summer months and the holidays to come.

Core Strategy #2: Deliver exceptional public services.

- * Maintain proper staffing levels in all departments
- * Provide proper and ongoing training for all staff in their respective field
- * Provide proper equipment to effectively and safely perform job duties
- * Deliver services with a customer-first mentality

Recommendation:

Authorize Posting of one Part-Time Clerk Position at Northbound Liquor

NPDES Phase II Stormwater Permit Program

2023 Annual Report

July 1st, 2024

James Pixley—GIS Coordinator / Stormwater Technician

Program Review

- Overview/Background
- Cambridge's MS4 Permit
- Status of Compliance
- Calendar Year 2023 Highlights
- Looking Forward

Overview/Background

Clean Water Act: Established National Pollutant Discharge Elimination System (NPDES) Permit

- U.S. Environmental Protection Agency
- Administered locally by MPCA

Municipal Separate Storm Sewer System (MS4)

- MS4 General Permit
- Coverage began in February 2007, expiration in 2013
- New issuance in 2014, expiration in 2019
- New permit has been issued with new standards to be implemented by October 8th of 2022

Cambridge's MS4 Program

Why?

- Population
- Rum River is a designated Scenic and Recreational River

What?

- Develop and implement a Stormwater Pollution Prevention Plan (SWPPP)
- Goals to reduce discharge of pollutants from the City's storm sewer system, protect water quality, and meet the requirements of the Clean Water Act.

Cambridge's MS4 Program

Stormwater Pollution Prevention Plan (SWPPP)

- Regulatory Mechanisms, ERPs, Mapping and Inventory
- Six Minimum Control Measures
 - Public Education and Outreach
 - 2. Public Participation and Involvement
 - 3. Illicit Discharge Detection and Elimination
 - 4. Construction Site Stormwater Runoff Control
 - 5. Post-Construction Stormwater Management
 - 6. Pollution Prevention/Good Housekeeping for Municipal Operations

Cambridge's MS4 Program

Annual Reporting Requirement

2021

- 2021 Annual Report covers the calendar year activities from January 1 to December 31, 2021
- Due June 30, 2022

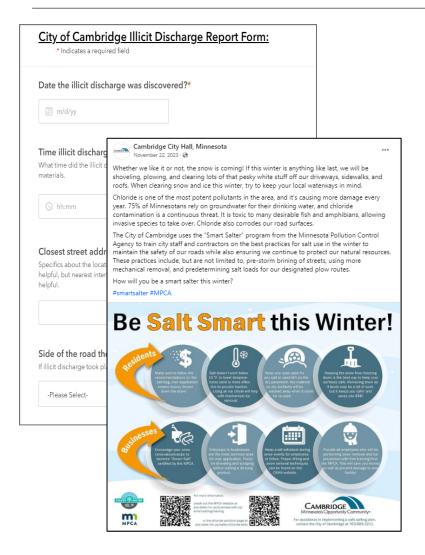

Status of Compliance

- State audit performed this May, covers 2021-2023
 - We're awaiting the MPCA's findings
- Several updates since 2021
 - Mock audit with SEH.
 - Ordinance updates
 - Procedural updates

2023 MCM Highlights

- Minimum Control Measures (MCM) assists the City in maintaining records, following state standards, and ensuring consistent enforcement of pollution reducing practices.
- Overall, we achieved the main goal of pollution reduction and enforcement, however there's always room to grow.

MCM 1: Public Education and Outreach

Stormwater Facebook articles
15k people reached

Information on season specific tips with an end result of better water quality

Informational pamphlets in front lobby

Presented information on stormwater system and pollution education to 5th grade conservation day

Illicit discharge form is still live on City's website

Pamphlet and compliance checklist sent along with building permits

MCM 2: Public Participation/Involvement

- The Stormwater Annual Meeting allows the public to learn about changes, updates, and additions to our SWPPP
- Adopt-a-Drain started in April of 2021, still gaining traction with the public and hopefully with the schools this next calendar year

MCM 3: Illicit Discharge Detection and Elimination

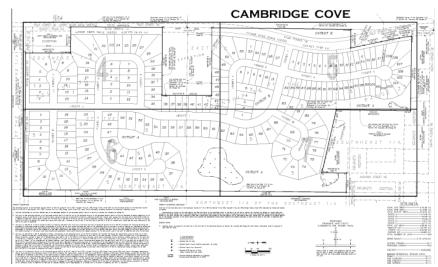

Property Violations

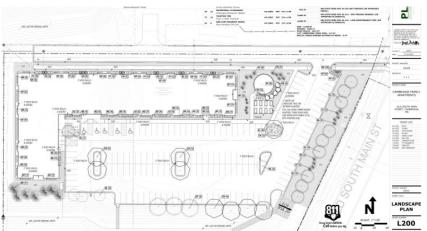

- 4 illicit discharges
- 1 spill
- One state involved investigation

Inventory

 Over 265,000 feet of storm piping with storm structure connections inventoried

MCM 4: Construction Site Stormwater Runoff Control

Inspections

- 54 Erosion Control (MS4) Inspections
- 4 Site Plan Reviews

Construction projects in 2023

- Cambridge Family Apartments
- Strong Oak Apartments
- Cambridge Cove
- Kwik Trip

Between fewer projects and better reception to staff guidance, we've had a much lower instance of compliance issues

MCM 6: Pollution Prevention/Good Housekeeping

Drainage Pond Inspections

- 74 Inspections performed
- Majority in satisfactory condition

All staff trained in-house on illicit discharge detection and SmartSalting

Illicit Discharge Detection & Elimination

Identifying, treating, and preventing it

2023 MCM Highlights

CITY OF CAMBRIDGE STORMWATER WORK ORDER

DATE: 8/31/2023	_		
STRUCTURE ID NUMBER	4-13		
JOB LOCATION: South of 1	7th East of Jefferson		
PROPERTY OWNER	MAIL ADDRESS	PHONE	ZIP
City of Cambridge			
JOB DESCRIPTION: Clea	r trees out of drain grate at 2	Z4-O29	
_ REPAIRS MADE:			

- Completed our first audit with the state
- All city staff that apply chloride products have been SmartSalt certified
- Developed a consistent work order system for staff to utilize

Upcoming Developments

Notable Upcoming Projects

- Cambridge Cove Phase 2
- Street Project 2025
- Completion of Oak Landing Apartments
- Completion of various pond and drainage maintenance activities
- Annual Reports submittals for 2022, 2023, and 2024

Next Steps

Comments on the MS4 Program

- Input will be considered for possible program modifications
- Any changes will be reviewed by staff and if implemented, reported in the 2024 Annual Report

Comprehensive Housing Needs Analysis For the City of Cambridge, Minnesota

Prepared For:

City of Cambridge Cambridge, Minnesota

2823 Hamline Ave S Roseville, MN 55113 612.338.0012 www.maxfieldresearch.com

June 26, 2024

Ms. Alex Smith, MPA
Deputy City Administrator
City of Cambridge
300 Third Ave NE
Cambridge, MN 55008

Dear Ms. Smith:

Attached is the *Comprehensive Housing Needs Analysis for Cambridge, Minnesota* conducted by Maxfield Research & Consulting, LLC. The housing analysis projects housing need through 2035 and provides recommendations on the amount and type of housing that could be built across Cambridge to satisfy demand from current and future residents over this decade. The study identifies a potential demand for over 1,700 new housing units through 2035. Driven by the growing Baby Boomer cohort, demand is strong for by age-restricted senior housing (849 units) whereas all-ages housing accounts for 52% of demand (919 units).

Overall, the housing market is very tight across Cambridge; in-part led by the pandemic-induced housing boom that further tightened the housing market over the past four years. Our inventory of rental properties (market rate and affordable/subsidized) found a combined vacancy rate of only 1.4% (1.8% market rate and 0.0% affordable/subsidized); indicating strong demand for new rental supply, but several new projects are under construction that should satisfy some of this demand. The senior housing market is bifurcated based on the product types. Active adult and independent living housing units have no vacancies, while assisted living and memory care have elevated vacancies and are still recovering from the pandemic's impact on the senior industry. Finally, the for-sale market has experienced record-low supply and strong appreciation over the past few years (+32% since 2020). The lot supply is tight and only able to meet short-term demand, as such new lots need to be platted in the near-term. Interest rates are impacting affordability and are holding the real estate in check as buyers are on the side-lines and sellers hold their record-low mortgage rates.

Detailed information regarding recommended housing concepts and the challenges associated with developing the needed housing can be found in the *Recommendations* and *Challenges and Opportunities* sections at the end of the report.

We enjoyed completing this study and are available if you have questions/need additional information.

Sincerely,

MAXFIELD RESEARCH & CONSULTING, LLC

Matt Mullins Vice President Attachment

Matt Mulline

LIST OF TABLES (CONTINUED)

CR1.	Summary of Housing Demand, Cambridge Market Area, 2024 - 2035	158
CR2.	Recommended Housing Development, Cambridge, 2024 to 2035	160

This section highlights the key findings from the Housing Demand Analysis completed for Cambridge. Calculations of projected housing demand are provided through 2035 and recommendations for housing products to meet demand over the short-term are found in the *Conclusions and Recommendations* section of the report.

Key Findings

- 1. Cambridge has experienced rapid population growth since the early 2000s; growing by 47% between 2000 and 2010 and 18.5% last decade. Projections for this decade show continued strong growth with a nearly 20% growth rate. However, given the higher-interest rate environment, new housing construction growth rates may slow temporarily as sellers do not want to give up their current interest rates and builders slow production with elevated financing costs. Once rates stabilize, growth is expected to accelerate.
- 2. The aging baby boomer generation (ages 60 to 78 in 2024) is impacting the composition of the Cambridge population. Younger seniors (ages 65 to 74) are projected to grow by 17% from 2024 to 2029, while the 75 and older age group is also projected to grow by 16%. This older population growth will result in demand for alternative housing products; both for-sale and rental housing types. At the same time, there is strong growth in the 45 to 54 age cohort (+15%), which are often seeking move-up for-sale housing stock.
- 3. Cambridge is a job importer as there is a positive inflow of about 1,392 workers. The labor force in Cambridge has remained relatively steady between 2012 and October 2023. In addition, the unemployment rate jumped to 6.8% in 2020 due to the COVID-19 pandemic and has recovered to 2.9% as of October 2023. The positive inflow of workers who commute to Cambridge provides an opportunity to draw new households into Cambridge through relocations.
- 4. The overall rental vacancy rate for the rental products surveyed in Cambridge was only 1.4%. Rental vacancy rates are well below market equilibrium (5% for market rate and 3% for subsidized/affordable) for market rate products at 1.6% and no vacant units as the surveyed affordable (shallow-subsidy) and subsidized products. Vacancy rates below equilibrium indicate pent-up demand for additional units at those income levels. At the same time, there are a number of new rental housing communities that are just opening or under construction at the time of this study (both in Cambridge and Isanti). The new supply will help absorb this pent-up demand but given the depth of new supply in the pipeline new market rate rental housing demand may be delayed as new deliveries are absorbed and the rental market is stabilized.

- 5. Rising mortgage rates and low supply impacted the Cambridge housing market coming out of the pandemic. Sales activity peaked in 2021 with over 400 transactions, before falling to only 180 sales in 2023. At the same time median sales prices have risen rapidly since the pandemic and have increased from \$228,000 on 2019 to \$330,000 in 2023, up 45%. Inventory has been tight in Cambridge since 2015 as there have been fewer options available for buyers for years. Over the past year, there have been very few homes for sale priced under \$300,000; impacting first time home buyers.
- 6. New single-family construction has been strong since 2017 and experienced a peak in 2021 during the pandemic. However, the increase in mortgage rates and higher housing costs has slowed for-sale new construction since 2022. Based on recent lot absorption, the current lot supply is only able to accommodate demand in the short-term. New platted lots are needed to accommodate longer-term demand.
- 7. There are 12 senior housing developments in Cambridge with 495 units. There were 63 vacancies identified among these properties for an overall vacancy rate of 12.7%. There were no vacancies in the following property types: market rate active adult ownership, market rate active adult rental, affordable active adult rental, and independent living. However, service-based senior housing is still recovering from the onsets of the pandemic is recording excessive vacancies in memory care and assisted living housing.
- 8. The demand for for-sale housing through 2035 was calculated for 657 units (447 single family units and 210 multifamily units). Thus, a need for additional buildable lots are needed for both single family and multifamily for-sale housing. There is also need for additional rental housing; both market rate (128 units) and subsidized affordable units (96 units). There is less demand for shallow subsidy affordable units (38 units). As for senior housing there is demand across all product types with independent living units having the most demand (169 units) and assisted living units having the least demand 69 units).
- 9. In the near-term, still stubborn inflation and rising mortgage rates are projected to slow the for-sale market and could impact multifamily housing development with rising construction and financing costs. As a result, mobility rates could flatten in the short-term as households are on the side-lines impacted by affordability and supply constraints. This demand will revert once interest rates stabilize, and consumer confidence returns.

Purpose and Scope of Study

Maxfield Research and Consulting, LLC. was engaged by the City of Cambridge to conduct a *Comprehensive Housing Needs Assessment* for the City of Cambridge, Minnesota. The Housing Needs Assessment provides recommendations on the amount and types of housing that should be developed in order to meet the needs of current and future households who choose to reside in the City.

The scope of this study includes: an analysis of the demographic and economic characteristics of the Cambridge Market Area; a review of the characteristics of the existing housing stock and building permit trends; an analysis of the market condition for a variety of rental, senior, and for-sale housing products; and an assessment of the need for housing by product type in the City. Recommendations on the number and types of housing products that should be considered in the City are also supplied.

Demographic Analysis

- The City of Cambridge population grew by 18.5% from 2010 to 2020 while households grew by 21.3%. The population is expected to continue to increase in the City of Cambridge, growing 17.8% from 2020 to 2029 and 7.7% from 2029 to 2035. Households will continue to grow as well, from 2020 to 2029 households are forecast to increase nearly 21% and approximately 8% from 2029 to 2035.
- The largest gains in the City of Cambridge population are expected in the age cohort under 18 (+156 people), the cohort age 65 to 74 (+158 people) and the cohort age 45 to 54(+169 people) through 2029. Proportionally, the older age cohorts (65 and over) will grow the most, with each increasing by more than 16%
- The median income in the City of Cambridge was \$65,643 in 2024 with an expected 14% increase by 2029 to \$74,516. Median incomes were the highest, reaching \$95,362, in the 45 to 54 age cohort when households are in their peak earning years prior to retirement.
- Homeownership rates increased as income increased in the City of Cambridge, climbing from 41% of households with incomes under \$15,000 to 100% of households with incomes over \$150,000.
- The median net worth in the Market Area was \$211,543 in 2024, higher than the City Cambridge net worth of \$132,752. The increased net worth in the Market Area is due higher homeownership rates and larger acreages and farmsteads.
- In the City of Cambridge, the proportion of owner-occupied households was 68%, with homeownership rising as households age. The homeownership rate falls again for those households over age 65.

- The largest household type in the City of Cambridge were single person households, representing nearly 36% of all households. More than the portion of single person households in the Market Area (24.5%) and the State of Minnesota (29.1%).
- Nearly 60% of renter households were single person households compared to only 25% of owner households. Owner households were most likely to be two-person households, representing 32% of owner households.
- In 2022, White Alone comprised the largest proportion of the population in the City of Cambridge (91.6%). After White Alone, respondents in the City of Cambridge were most likely to identify as Asian Alone (3.9%). Only 1% of respondents in the City of Cambridge identified as Hispanic, lower than the Remainder of the Market Area (3.2) and the State of Minnesota (5.7%).
- The majority of residents in the City of Cambridge (83.7%) did not move within the last year. Of the residents that moved approximately 8.7% moved from another Minnesota county and 6.4% moved within the County. Mobility was higher in the City of Cambridge compared to the Market Area and the State of Minnesota, where 87% of residents did not move in each area.

Employment Trends

- The Central Minnesota Planning Area, which includes 13 Minnesota Counties (Benton, Chisago, Isanti, Kanabec, Kandiyohi, McLeod, Meeker, Mille Lacs, Pine, Renville, Sherburne, Stearns and Wright Counties) experienced a 7.4% increase in employment from 2010 to 2020, despite employment falling -2% from 2015 to 2020.
- Employment is expected to grow by 5% from 2020 to 2030, buoyed by a 4% jump in employment from 2020 to 2022 during the recovery from the global pandemic.
- Total employment increased 6.5% from 2012 to 2022. During the same time, the unemployment rate fell from 7% to 3.4%.
- The largest employment sector in the City of Cambridge was the Education and Health Services industry (31.7%) with an average weekly wage of \$1,025 and the Trade, Transportation and Utilities industry (24%) with and average weekly wage of \$612 in the second quarter of 2023.
- The most common work destinations among Cambridge residents were Cambridge (23%), Minneapolis (6.7%) and Isanti (5.8%).
- The City of Cambridge can be considered an importer of workers, as the number of workers coming into the City (5,146) for employment was higher than the number of residents leaving the City for work (3,754). An additional 1,110 workers were interior workers, who both live and work in the City.

The Trade, Transportation and Utilities industry accounted for more than half (+508 employees) of the employment growth in the City of Cambridge from 2010 to 2022. In addition, the Construction industry more than doubled (+131%) during this time, adding 80 employees. At the same time, the largest employment industry in the City of Cambridge, Education and Health Services, has decreased its share of employment, dropping from 37% in 2005 to 31% in 2022.

Housing Characteristics

- According to the City, there were 1,419 units permitted in Cambridge from 2010 through mid-October 2023. Multi-family units made up 67.4% of units permitted during this time, totaling 957 units, and the majority of those multi-family units (794) were for apartments. The remaining 462 permits were for single family units.
- The majority of owner-occupied homes were single-family detached homes (80.5%) in Cambridge. Renter occupied homes in the City of Cambridge were split between single-family detached homes (23.5%) and within buildings with more than 50 units (23.5%).
- The majority of homes in the City of Cambridge (69%) held a mortgage.
- Owner-occupied homes in the City of Cambridge were most likely to be valued between \$150,000 and \$399,999, accounting for 49% of all homes in the City.
- Median contract rent in the City of Cambridge (\$976) was comparable to the median contract rent in the State of Minnesota (\$972).
- From 2010 to 2021, the proportion of owner-occupied homes rose in the City of Cambridge from 61% to 66% of homes while vacant properties declined from 8.4% of homes to 4.3%.

Rental Housing Market Analysis

- In total, Maxfield Research inventoried 1,483 general occupancy multifamily rental units in Cambridge across 32 multifamily developments.
- In February 2024, we identified and surveyed 27 general occupancy rental properties of 18 or more units (1,452 units). These properties included 1,083 market rate units with a 1.4% vacancy rate (20 vacant units), 174 affordable units with a 0.0% vacancy rate (no vacancies), and 195 subsidized units with a 0.0% vacancy rate (0 vacancies). Typically, a healthy rental market maintains a vacancy rate of roughly 5%, which promotes competitive rates, ensures adequate consumer choice, and allows for unit turnover. This low vacancy rate could indicate pent-up demand for additional rental housing.

Senior Housing Market Analysis

- In February 2024, we identified and surveyed 12 senior housing properties. Combined, these properties contain 341 units.
- The predominant senior housing product type in Cambridge is assisted living, which accounted for 34.6% of all senior housing.
- There were no vacancies in active adult ownership, active adult market rate, affordable active adult, subsidized active adult units or independent living units rate in the City of Cambridge. Memory care units (57.5%) and assisted living units (17.8%) each had high vacancies.

For-Sale Housing Market Analysis

- The Great Recession sent median resale prices falling in the Market Area beginning in 2006 through 2011. Median resale prices only reached pre-recession prices in 2017. Since 2017, resale prices have risen annually from \$192,000 to \$330,000 in 2023.
- On average, there are 248 resales in the City of Cambridge annually. Resales reached a yearly high of 405 in 2020, likely as the result of the pandemic generated mobility. By 2023, resales were below average at 179 as rising interest rates took effect.
- Nearly 80% of resales in 2023 were priced between \$200,000 and \$399,999.
- Active for-sale listings in January 2024 were all listed at more than \$200,000, with five listing exceeding \$500,000.
- Three-quarters of new construction closings in the City of Cambridge have been priced between \$300,000 and \$400,000, compared to only 12% in the Greater Metro Area and 44% in Isanti County.
- Metro Study identified eight single family subdivisions in the City of Cambridge with lots available. Three of the subdivisions were platted in the last year, while the other five were platted in the early 2000's. There were eight closings and 21 housing starts in these subdivisions.
- Per the City of Cambridge, there were 165 vacant lots in the fourth quarter of 2023.

Housing Affordability

About 29% of owner households and 58% of renter householders are estimated to be paying more than 30% of their income for housing costs in the City of Cambridge. By comparison, 22% of owner households and 64% of renter households in the Market Area are cost burdened.

- About 47% of the Cambridge Market Area households could afford to buy an entry-level home (\$275,000). Additionally, about 57% of existing owner households could afford to purchase a home of \$275,000.
- Over 80% of existing Market Area renter households can afford to rent a one-bedroom unit in Cambridge (approx. \$925/month). The percentage of renter income-qualified households decreases to roughly 68% that can afford an existing three-bedroom unit (approx. \$/month).

Housing Needs Analysis

 Based on our calculations, demand exists for the following general occupancy product types between 2024 and 2035 in the City of Cambridge:

0	Market rate rental	128 units
0	Affordable rental	38 units
0	Subsidized rental	6 units

For-sale single-family
 447 units (After existing lots absorbed)

For-sale multifamily
 210 units

• In addition, we find demand for most senior housing product types. By 2035, demand for senior housing is forecast for the following in the City of Cambridge:

0	Active adult ownership	115 units
0	Active adult market rate rental	139 units
0	Active adult affordable	163 units
0	Independent Living	161 units
0	Assisted living	69 units
0	Memory care	93 units

Recommendations and Conclusions

 Based on the finding of our analysis and demand calculations, the following chart provides a summary of the recommended development concepts by product type for the City of Cambridge through 2035. Detailed findings are described in the Conclusions and Recommendations section of the report.

RE	COMMENDED HOUSING DEVELOPM CITY OF CAMBRIDGE 2024 to 2035	ENT	
	Purchase Price/ Monthly Rent Range ¹	No. of Units	Development Timing
Owner-Occupied Homes			
Single Family			
Entry-level	<\$300,000	145 - 150	Ongoing

² Affordablity subject to income guidelines per Minnesota Housing Finance Agency (MHFA). See Table HA-1 for Isanti County Income

Source: Maxfield Research & Consulting, LLC.

³ Subsized housing will be difficult to develop financially. Hence, some demand moved from subsidized to affordable

⁴ Alternative development concept is to combine active adult affordable and market rate active adult into mixed-income senior communities.

Purpose and Scope of Study

Maxfield Research and Consulting, LLC. was engaged by the City of Cambridge to conduct a *Housing Needs Assessment* for the City of Cambridge, Minnesota. The Housing Needs Assessment provides recommendations on the amount and types of housing that should be developed in order to meet the needs of current and future households who choose to reside in the City.

The scope of this study includes: an analysis of the demographic and economic characteristics of the Cambridge Market Area; a review of the characteristics of the existing housing stock and building permit trends; an analysis of the market condition for a variety of rental, senior, and for-sale housing products; and an assessment of the need for housing by product type in the City. Recommendations on the number and types of housing products that should be considered in the City are also supplied.

Methodology

During the course of the study a number of resources were utilized to obtain information in the analysis. The primary data and information sources include the following:

- U.S. Census Bureau; American Community Survey
- Minnesota Department of Employment and Economic Development (DEED)
- United States Department of Housing and Urban Development (HUD)
- Environmental Systems Research Institute (ESRI)
- CoStar, Inc.
- Regional Multiple Listing Service of Minnesota (RMLS)
- Metrostudy
- The City of Cambridge
- Isanti County
- Longitudinal Employer-Household Dynamics (LEHD)
- Minnesota Geospatial Commons
- Minnesota Housing Finance Agency (MHFA)
- Dept. of Housing & Urban Development (HUD)
- Novogradac
- Private property owners/managers, realtors, brokers, developers, employers, etc.

Introduction

This section of the report examines factors related to the current and future demand for both owner- and renter-occupied housing in Cambridge, Minnesota. It includes an analysis of population and household growth trends and projections, projected age distribution, household income, household types, household tenure, employment growth trends and characteristics, age of housing stock, and recent residential building permit trends for the Cambridge Market Area. A review of these characteristics will provide insight into the demand for various types of housing in the Market Area.

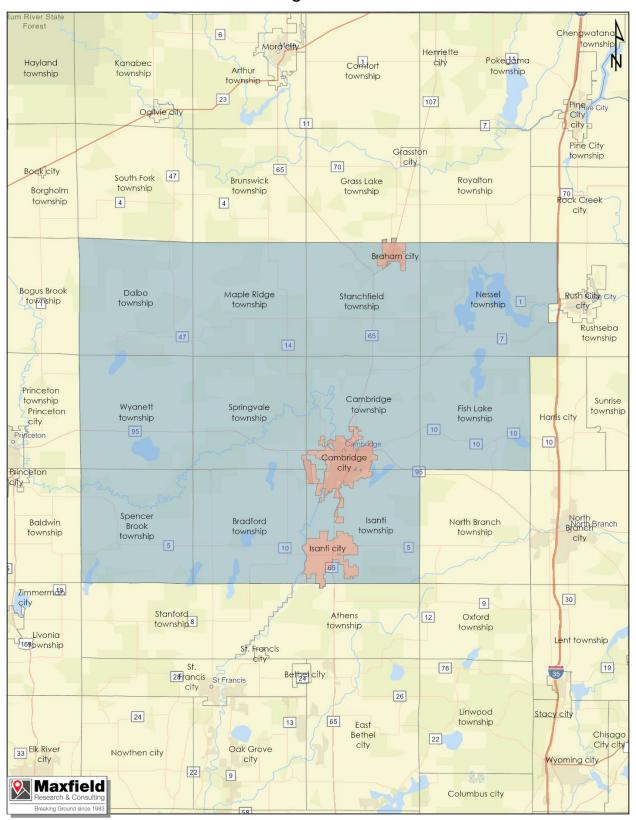

Market Area Definition

The primary draw area (Market Area) for housing in Cambridge was defined based on traffic patterns, community and school district boundaries, geographic and man-made barriers, and our general knowledge of the draw area. The Market Area includes the City of Cambridge, City of Isanti, and a portion of Braham (part). In addition, 11 townships in Isanti and Chisago Counties are also included in the Market Area.

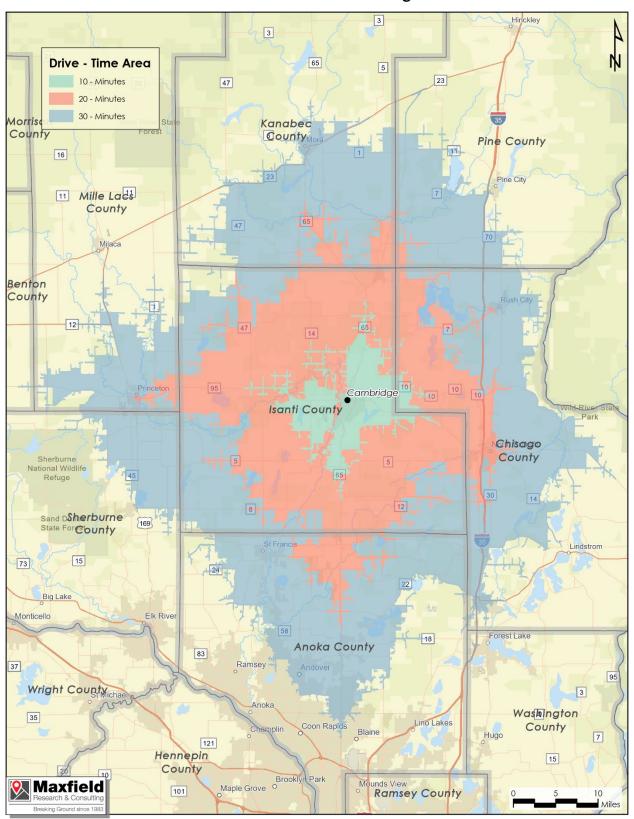

The City of Cambridge is expected to account for a majority of the total demand for housing in the Market Area, depending on the housing product. Additional demand will come from individuals moving from just outside the area, those who return from other locations (particularly young households returning after pursuing their degrees or elderly returning from retirement locations), and seniors who move to be near the adult children living in the Market Area. Demand generated from within and outside of the Market Area is considered in the demand calculations presented later in this analysis.

Historic Population and Household Growth Trends

The figure below shows the historic population of City of Cambridge from the U.S. Census Bureau from 1900 to 2020.

- The population of the City of Cambridge has experience strong growth over the history of the City. In 1900, the population of the city was 737, by 2020, the population of City reached 9,611.
- On average, the City population has grown by 25% per decade, although significant variability does exist between individual decades. Growth was rather steady between 1900 and 1950, before spiking in the 1950s. However, from 1960 to 1970 the population stagnated, officially declining by -0.3%, but the population grew by 55% from 1980 to 1990.

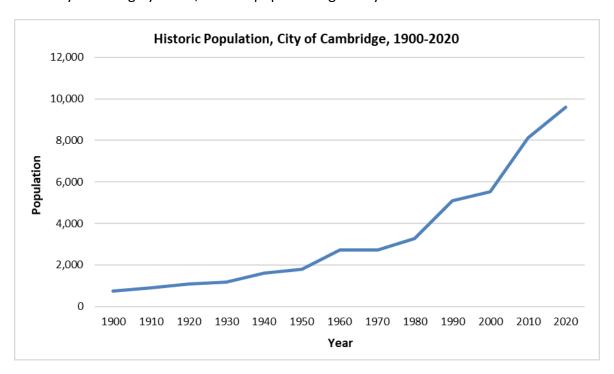

Table D-1 show historic population trends for the Market Area, Isanti County, and State of Minnesota from 2000 to 2020.

- The population of the Market Area grew by 24.1% from 2000 to 2010. Population growth in the PMA exceeded that of Isanti County (+20.9%) and the State of Minnesota (+7.8%).
- Population growth continued the following decade, growing by nearly 10% from 2010 to 2020. Population growth during this decade was closer, although still above, the growth in Isanti County (+8.8%) and the State of Minnesota (+7.6%).
- Cities within the PMA recorded the largest population gains in the PMA from 2000 to 2010. The City of Braham's population grew by 40.5% and the City of Isanti more than doubled

(+125.9%) its population during this time. In the City of Cambridge, the population grew by 46.9% (+2,591).

• Population growth in the Market Area cities continued from 2010 to 2020 for the City of Isanti (+29.6%) and the City of Cambridge (+18.5%). The City of Braham recorded a population loss of -1.3% (-24).

Table D-2 shows historic household trends for the Market Area, County and State of Minnesota from 2000 to 2020.

- Household growth typically outpaces population growth, which is evident in the household growth trends of the PMA since 2000. PMA households grew by 27.1% from 2000 to 2010 and 12.1% from 2010 to 2020, slightly above the population growth.
- From 2000 to 2010, 2,756 households were added to the Market Area, a 27.1% increase. Another 1,561 households were added to the Market Area from 2010 to 2020 (+12.1%).
- The City of Cambridge and the City of Braham experienced less household growth than population growth from 2000 to 2010. The City of Cambridge experienced household growth of 40.2% during this time, compared to 46.9% growth in population. Similarly, households grew by 38.6% in the City of Braham compared to 40.5% population growth.

Household growth began to outpace population growth in both cities from 2010 to 2020.

Population and Household Estimates and Projections

Table D-3 presents population and household growth estimates and projections for the Market Area through 2035. Estimates for 2023 and projections through 2035 are based on information from ESRI (a national demographics service provider) and the Minnesota State Demographic Center, with adjustments calculated by Maxfield Research and Consulting, LLC.

- Between 2010 and 2020, the population of the City of Cambridge grew by 1,500 people (+18.5%). During the same time, the population of the Remainder of the Market Area rose by 7.3% (1,949 people).
- Population growth is expected to continue to be strong in the City of Cambridge. From 2020 to 2029, the population is forecast to increase by another 17.8% (+1,714 people) in the City of Cambridge. Population growth is anticipated to moderate in the City of Cambridge from 2029 to 2035, increasing by 7.7% (+875 people).
- Household growth in the City of Cambridge is forecast to outpace the population growth through 2035. There were 668 households added to the City of Cambridge from 2010 to

2020 (+21.3%). An additional 795 households (+20.9%) are expected from 2020 to 2029 and 375 additional households (+8.2%) are expected to be added to the City of Cambridge from 2029 to 2035.

- The Remainder of the Market Area is expected to experience population and household growth from 2020 to 2035, but at a lower proportion than in the City of Cambridge. From 2020 to 2029 the population in the Remainder of the Market Area is forecast to grow by 5.6% and 3.0% from 2029 to 2035.
- As in the City of Cambridge, household growth in the Remainder of the Market Area is projected to be higher than population growth, although below the growth of households in the City of Cambridge. Households in the Remainder of the Market Area are forecast to increase 7.4% from 2020 to 2029 and 3.7% from 2029 to 2035.

Age Distribution Trends

The age distribution of a community's population helps in assessing the type of housing needed. For example, younger and older people are more attracted to medium and higher-density housing located near services and entertainment while middle-aged people (particularly those with children) traditionally prefer lower-density single-family homes. Table D-4 presents the age distribution of Cambridge and the Market Area population from 2000 to 2029. Information from 2000, 2010 and 2020 is sourced from the U.S. Census. The 2024 estimates and projections for 2029 were provided by ESRI, with adjustments made by Maxfield Research.

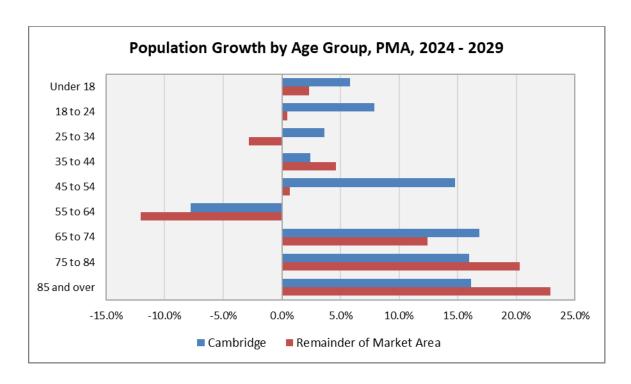

- Between 2010 and 2020, the City of Cambridge experienced significant growth in the 55 to 64 age cohort (+308 people), the 65 to 74 age cohort (+305 people) and the 35 to 44 age cohort (+299 people).
- From 2020 to 2024, the 55 to 64 age cohort has continued to grow (+268 people). At the same time, younger age cohorts have experienced strong growth. The largest population increases occurred in the under 18 age cohort (+228 people) and the 18 to 24 age cohort (+225 people).

- The demographic growth in the coming five years suggests an expansion of family households as the largest population increases are expected in the under 18 age cohort (+156 people), those in the 45 to 54 age cohort (+169 people). The population age 65 to 75 is forecast to add 158 people as well.
- Although the under 18 and 35 to 44 age cohorts are also expected to increase in the Remainder of the Market Area, the population over age 65 will experience the largest growth

in the next five years. The 65 to 74 age cohort will add 367 people and the 75 to 84 age cohort will add 293 people.

Household Income by Age of Householder

The estimated distribution of household incomes in the Market Area for 2024 and 2029 are shown in Tables D-5 and D-6. The data was estimated by Maxfield Research and Consulting based on income trends provided by ESRI. The data helps ascertain the demand for different housing products based on the size of the market at specific cost levels.

The Department of Housing and Urban Development defines affordable housing costs as 30% of a household's adjusted gross income. For example, a household with an income of \$50,000 per year would be able to afford a monthly housing cost of about \$1,250. Maxfield Research and Consulting uses a figure of 25% to 30% for younger households and 40% or more for seniors, since seniors generally have lower living expenses and can often sell their homes and use the proceeds toward rent payments.

A generally accepted standard for affordable owner-occupied housing is that a typical household can afford to pay 3.0 to 3.5 times their annual income on a single-family home. Thus, a \$50,000 income would translate to an affordable single-family home of \$150,000 to \$175,000. The higher end of this range assumes that the person has adequate funds for down payment and closing costs, but also does not include savings or equity in an existing home which would allow them to purchase a higher priced home.

The City of Cambridge had an estimated median household income of \$65,643 in 2024. The
median income in the Market Area was estimate at \$78,999 in 2024. The higher median income in the Remainder of the PMA is due to higher home ownership rates, farmsteads, etc.

• The median income in the City of Cambridge is projected to increase nearly 14% by 2029 to \$74,516. Incomes are also expected to grow in the Market Area, rising to \$86,271 (+9.2%).

Non-Senior Households

- In 2024, only 5% of the non-senior (under age 65) households in the Cambridge Market Area had incomes under \$15,000 (582 households). All of these households would be eligible for subsidized rental housing. Another 3% of the Market Area's non-senior households had incomes between \$15,000 and \$25,000 (353 households). Many of these households would qualify for subsidized housing, but many could also afford "affordable" or older market rate rentals. If housing costs absorb 30% of income, households with incomes of \$15,000 to \$25,000 could afford to pay \$375 to \$625 per month. Average monthly rents for one-bedroom units in the Cambridge Market Area are about \$1,110 (shown in Table R-4 in the Rental Housing Analysis section).
- Median incomes for households in the Market Area peak at \$95,362 for the 45 to 54 age cohort in 2024. Households in this age group are in their peak earning years. By 2029, the median income for the 45 to 54 age group is projected to increase to \$101,752, a 6.7% increase.
- The median resale price of homes in the City of Cambridge was approximately \$306,900 in 2023 (Table FS-2). The income required to afford a home at this price would be about \$87,685 to \$102,300 based on the standard of 3.0 to 3.5 times the median income (and assuming these households do not have a high level of debt). In 2024, 39% (1,495 households) of the City of Cambridge's households under age 75 had incomes greater than \$87,686.

Senior Households

- The oldest householders are likely to have lower incomes. In 2024, 11% of households ages 65 to 74 and 18% of households ages 75 and over had incomes below \$15,000 in the Market Area. Many of these low-income older senior households rely solely on social security benefits. Typically, younger seniors have higher incomes due to the fact they are still able to work or are married couples with two pensions or higher social security benefits. The 2024 median income for Market Area householders aged 65 to 74 and 75+ are \$62,809, and \$35,423, respectively.
- Seniors who are able and willing to pay 80% or more of their income on assisted living housing would need an annual income of \$33,000 to afford monthly rents of \$2,200, which is the lowest monthly rent for a private assisted living room in the Market Area. There were an estimated 1,075 older senior (ages 75 and over) households (66%) with incomes greater than \$33,000 in 2024. Seniors aged 75 and over are the primary market for assisted living housing.

Tenure by Household Income

Table D-7 shows household tenure by income for the City of Cambridge, the Cambridge Market Area and Isanti County in 2022. Data is an estimate from the American Community Survey. Household tenure information is important to assess the propensity for owner-occupied or

renter-occupied housing options based on household affordability. As stated earlier, the Department of Housing and Urban Development determines affordable housing as not exceeding 30% of the household's income. It is important to note that the higher the income, the lower percentage a household typically allocates to housing. Many lower income households, as well as many young and senior households; spend more than 30% of their income, while middleaged households in their prime earning years typically allocate 20% to 25% of their income.

- Typically, as income increases, so does the rate of homeownership. This can be seen in the Cambridge Market Area, where the lowest homeownership rate was 48% for households with incomes less than \$15,000. Among households with incomes over \$150,000, the homeownership rate was 98.1%.
- In 2022, the median income of owner-occupied homes was \$96,933 while the median incomes of renter occupied homes was \$45,604 in the Market Area.
- As in the Market Area, homeownership rates increased as income increased in the City of Cambridge, climbing from 41% of households with incomes under \$15,000 to 100% of households with incomes over \$150,000.
- A portion of renter households that are referred to as lifestyle renters, or those who are financially able to own but choose to rent, have household incomes above \$50,000. Lifestyle renters represent about 39% of the Cambridge Market Area's renters in 2022.
- Households with incomes below \$15,000 are typically a market for deep subsidy rental housing. Approximately 17% of the Cambridge Market Area's renters in 2022 fall in this income category.

Net Worth

Table D-8 shows household net worth in the Cambridge Market Area in 2024. Simply stated, net worth is the difference between assets and liabilities, or the total value of assets after the debt is subtracted. The data was compiled and estimated by ESRI based on the Survey of Consumer Finances and Federal Reserve Board data.

- The Cambridge Market Area had an average net worth of \$842,786 in 2024 and a median net worth of \$211,543. Median net worth is generally a more accurate depiction of wealth than the average figure. A few households with large net worths can skew the average. Communities with high levels of farming equipment and land assets tend to also increase the average and median net worth in those areas.
- Similar to household income, net worth increases as households age and decreases after they pass their peak earning years and move into retirement. Median and average net worth usually peak in the 65 to 74 age cohort. Senior households usually have a higher net worth due to their 401k's and other retirement funds. In addition, senior households that continue to have higher average net worth could be an indication of farm equipment and land assets being retained. In the Cambridge Market Area, median net worth reaches a high of \$359,892 in the 65 to 74 age cohort.
- Net worth is higher in the rural areas of the Market Area than within city limits. This is due
 to higher homeownership rates (i.e., home equity) and larger acreages and farmsteads.
 While the median net worth of the Market Area peaks at nearly \$359,892 for the 65 to 74
 age cohort, the median net worth of the City of Cambridge reaches its highest at \$246,519
 among the 65 to 74 and over cohort.

Data Note: Net Worth is total household wealth minus debt, secured and unsecured. Net worth includes home equity, equity in pension plans, net equity in vehicles, IRAs and Keogh accounts, business equity, interest-earning assets and mutual fund shares, stocks, etc. Examples of secured debt include home mortgages and vehicle loans; examples of unsecured debt include credit card debt, certain bank loans, and other outstanding bills. Forecasts of net worth are based on the Survey of Consumer Finances, Federal Reserve Board. Detail may not sum to totals due to rounding.

Tenure by Age of Householder

Table D-9 shows the number of owner and renter households in the City of Cambridge, the Market Area and Isanti County by age group in 2010 and 2022. This data is useful in determining demand for certain types of housing since housing preferences change throughout an individual's life cycle.

- In 2010, 82% of all households in the Market Area owned their housing. The proportion of owner-occupied housing the Market Area was stable through 2022 (83%).
- In the City of Cambridge, the proportion of owner-occupied households (68%) was less than in the Market Area in and the County (84%) in 2022. The City provides more rental stock compared to other areas in the Market, helping to elevate the proportion of renters within the City.

- As households progress through their life cycle, housing needs change. The proportion of
 renter households decreases significantly as households age out of their young-adult years.
 However, by the time households reach their senior years, rental housing often becomes a
 more viable option than homeownership, reducing the responsibility of maintenance and a
 financial commitment.
- In 2022, 50.5% of the Market Area's households under the age of 25 rented their housing.
 Owner households reach their peak among the 45 to 54 age cohort, when 90% of all households were owner occupied.
- The rental rates increase slightly among the 55 to 64 age cohort and those over 65 years old.

Household Type

Table D-10 shows a breakdown of the type of households present in the Market Area in 2010 and 2022. The data is useful in assessing housing demand since the household composition often dictates the type of housing needed and preferred.

- People living alone represent the largest share of households in the City of Cambridge (35.8%). Married couples without children represented the largest share of households in the Market Area (33.5%) and the State of Minnesota (30%).
- The proportion of households consisting of married couples without children was much lower in the City of Cambridge (23.1%) compared to the Market Area and the State of Minnesota.
- Married households with children fell from 20.7% of households to 16% of households between 2010 and 2022 in the City of Cambridge. During the same time, single person households rose from 31.6% to 35.8% in the City of Cambridge.

Tenure by Household Size

Table D-11 shows the distribution of households by size and tenure in the City of Cambridge and the Cambridge Area in 2010 and 2022. This data is useful in that it sheds insight into the number of units by unit type that may be most needed in the Market Area.

- Household size for renters tends to be smaller than for owners. This trend is a result of the typical market segments for rental housing, including households that are younger and are less likely to be married with children, as well as older adults and seniors who choose to downsize from their single-family homes. In 2022, approximately 60% of the renter-occupied households in the City of Cambridge were one-person households, while 25% of owner households were single person households.
- The largest proportion of owner households were two person households, representing 32% of owner households.
- Similar trends were observed in the Market Area, where one person households comprised the majority of renter households (53%) and two person households accounted for the majority of owner occupied households (40%) in 2022.

Diversity

The population distribution by race, Table D-12 presents the diversity of the population in the City of Cambridge, the Remainder of the Market Area, and the Market Area for 2010 and 2022. The data was obtained from the U.S. Census and American Community Survey.

- In 2022, White Alone comprised the largest proportion of the population in the City of Cambridge (91.6%) and the Remainder of the Market Area (94.8%). The percentage has decreased since 2010 where "White Alone" was 96% in the Market Area and 94.5% in the City of Cambridge.
- After White Alone, respondents in the City of Cambridge were most likely to select Asian Alone (3.9%).
- U.S. Census respondents are able list themselves ethnically as Hispanic or Latino, in addition
 to listing themselves racially. As of 2022, 1% of the City of Cambridge population was Hispanic/Latino compared to 3.2% in the Remainder of the Market Area and 5.7% in the State
 of Minnesota.

Mobility in the Past Year

Table D-13 shows mobility patterns of Market Area residents within a one-year timeframe. The data is sourced to the 2018-2022 American Community Survey, the most recent data available. People move for various reasons, but housing is the primary motivator, followed by family-related reasons, and job-related reasons. Local moves are generally housing-related, while longer-distance moves are typically job-related.

- The majority of residents in the City of Cambridge (83.7%) did not move within the last year.
- Of the remaining residents that moved within the last year, approximately 8.7% moved from another Minnesota county and 6.4% moved within the County.
- Mobility was slightly less in the Market Area, where 87.2% of residents did not move within the last year and the state of Minnesota where 87% did not move.
- The population between 18 and 24 and 65 to 74 had the greatest mobility at approximately 31% each. Mobility in the 18 to 24 age cohort likely reflects the transition into adulthood, which may include relocating for school, employment, or both. The increased mobility among 65- to 74-year-olds likely reflects the necessary or voluntary choice of retirees and seniors to move from their long time homes.

Demographic Summary

- In the City of Cambridge, the population is expected to increase by 17.8% from 2020 to 2029 and 7.7% from 2029 to 2035. Households will continue to grow as well, from 2020 to 2029 households are forecast to increase nearly 21% and approximately 8% from 2029 to 2035.
- The largest gains in the City of Cambridge population are expected in the age cohort under 18 (+156 people), the cohort age 65 to 74 (+158 people) and the cohort age 45 to 54(+169 people) through 2029.
- The median income in the City of Cambridge was \$65,643 in 2024 with an expected 14% increase by 2029 to \$74,516.
- In 2022, the median income of owner-occupied homes was \$96,933 while the median incomes of renter occupied homes was \$45,604 in the Market Area. Homeownership rates increased as income increased in the City of Cambridge, climbing from 41% of households with incomes under \$15,000 to 100% of households with incomes over \$150,000.
- The median net worth in the Market Area was \$211,543 in 2024.
- In the City of Cambridge, the proportion of owner-occupied households was 68%, with homeownership rising as households age, before falling among households over age 65.
- The largest household type in the City of Cambridge were single person households, representing nearly 36% of all households.
- Nearly 60% of renter households were single person households compared to only 25% of owner households.
- In 2022, White Alone comprised the largest proportion of the population in the City of Cambridge (91.6%). After White Alone, respondents in the City of Cambridge were most likely to select Asian Alone (3.9%).
- The majority of residents in the City of Cambridge (83.7%) did not move within the last year. Of the residents that moved approximately 8.7% moved from another Minnesota county and 6.4% moved within the County.

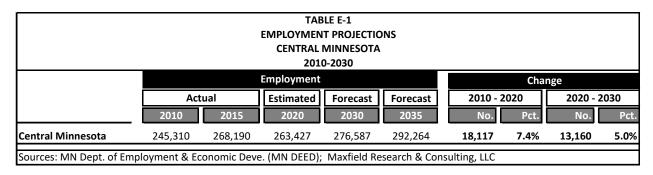

Employment Trends

Since employment growth generally fuels household growth, employment trends are a reliable indicator of housing demand. Typically, households prefer to live near work for convenience. However, housing is often less expensive in smaller towns, making commuting from outlying communities to work in larger employment centers attractive for households concerned about housing affordability.

Employment Growth and Projections

Table E-1 shows projected employment growth in Central Minnesota. Table E-1 shows employment growth trends and projections from 2010 to 2030 based on the most recent Minnesota Department of Employment and Economic Development (DEED) Employment Outlook projections. The 2030 forecast is based on industry projections for the Central Minnesota Planning area. The Central Minnesota Planning area consists of 13 Minnesota Counties (Benton, Chisago, Isanti, Kanabec, Kandiyohi, McLeod, Meeker, Mille Lacs, Pine, Renville, Sherburne, Stearns and Wright Counties). Projections are unavailable at the municipal level.

- From 2010 to 2020, employment rose 7.4% in the Central Minnesota region. Employment grew in the region during the decade, despite falling by almost -2% between 2015 and 2020.
- However, between 2020 and 2022, employment grew by 4% in Central Minnesota. This is likely a reaction to the employment changes created by the global pandemic, which caused employment to drop rapidly in 2020. Since 2020, employment gains have been observed, as seen in the growth in employment in the Central region from 2020 to 2022.
- Long-term employment projections forecast 5% employment growth from 2020 to 2030.
 With the gains made in employment from 2020 to 2022, in addition to the expected long-term growth, employment in the Central region is forecast to reach 276,587 by 2030.

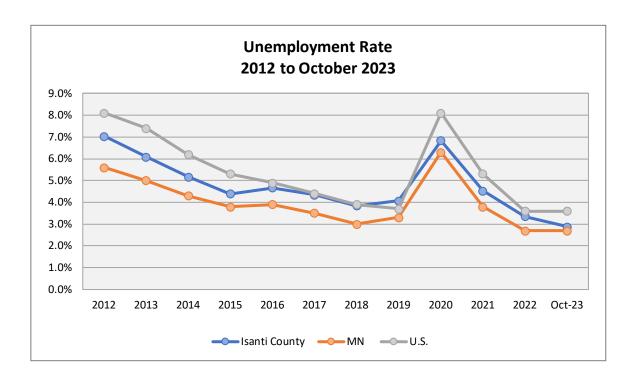

Resident Labor Force

Table E-2 presents resident employment data for Isanti County from 2012 through October 2023, city level data was unavailable. Resident employment data is calculated as an annual average and reveals the work force and number of employed persons living in the area. It is important to note that not all of these individuals necessarily work in the area. The data is obtained from the Minnesota Department of Economic Development (MN DEED). Unemployment rate data is also provided for Minnesota, and the US.

- Total employment increased 6.5% in Isanti County from 2012 to 2022 (+1,333 people).
- In the last decade, the unemployment rate in Isanti County has fallen from 7% in 2012 to 3.4% in 2022.
- Employment has trended downward in the County since 2012. The downward trend of unemployment was briefly interrupted in 2020 when unemployment jumped to 6.8%, up from 4.1% the previous year. This jump is largely due to the COVID-19 pandemic. By 2021, unemployment had fallen again to 4.5% and continued to fall through October 2023.

		DECIDENT EN	TABLE E-2

2019	21,688	20,807	881	4.1%	3.3%	3.7%				
2020	22,056	20,548	1,508	6.8%	6.3%	8.1%				
2021	21,337	20,372	965	4.5%	3.8%	5.3%				
2022	21,709	20,980	729	3.4%	2.7%	3.6%				
Oct-23	21,784	21,156	628	2.9%	2.7%	3.6%				
Change 2012-'22	1,333	2,038	-705	-3.7%	-2.9%	-4.5%				

Unemployment has generally been declining since 2012 in Isanti County, but it has remained above the unemployment rate of the State of Minnesota. However, the unemployment gap between Isanti County and the State of Minnesota has been closing.

Covered Employment and Wages by Industry

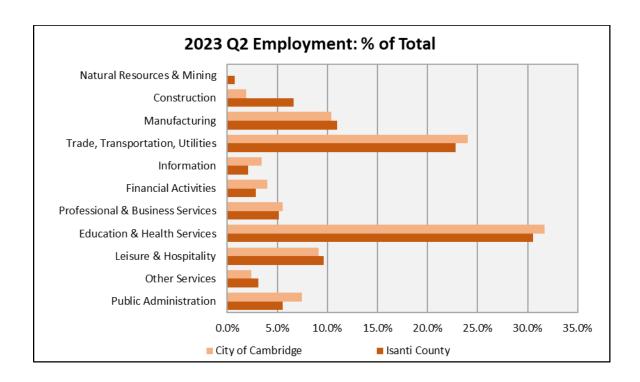

Table E-3 displays information on the employment and wage conditions in the City of Cambridge compared to Isanti County. The Quarterly Census of Employment and Wages (QCEW) data is sourced from DEED and represents data for the second quarter of 2022 compared to the third quarter of 2023, the most recent data available.

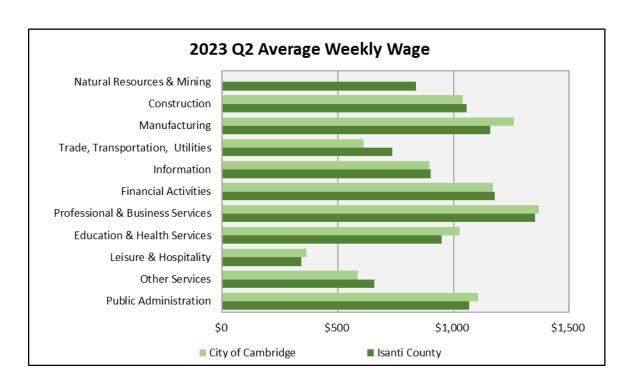

All establishments covered under the Unemployment Insurance (UI) Program are required to report wage and employment statistics to DEED quarterly. Certain industries in the table may not display any information which means that there is either no reported economic activity for that industry or the data has been suppressed to protect the confidentiality of cooperating employers. This generally occurs when there are too few employers, or one employer comprises too much of the employment in that geography.

- The largest employment sector in the City of Cambridge was the Education and Health Services industry (31.7%), followed by the Trade, Transportation and Utilities industry (24%).
 These were also the largest employment sectors in Isanti County.
- Average weekly wages in the City of Cambridge were \$906 in the first quarter of 2023.
 Wages were similar in the County, which reported an average weekly wage of \$895.
- A household earning the average weekly wage in the City of Cambridge (\$895) would be
 able to afford rent or mortgage payments of an estimated \$1,178 per month to not exceed
 30% of its monthly income on housing costs.

- The Education and Health Services industry reported a weekly wage of \$1,025 in the second quarter of 2023. The Trade, Transportation and Utilities industry had an average weekly wage of \$612 during the same time.
- The highest paying industry in the City of Cambridge was the Professional and Business industry, with an average weekly wage of \$1,368 followed by Manufacturing at \$1,262. This industry (Professional and Business industry) represented 5% of employment in the City during the second quarter of 2023. Meanwhile, the lowest paying industry was the Leisure and Hospitality industry with an average weekly wage of \$366, representing nearly 10% of employment in the City of Cambridge.
- Wages and employment were generally stable between 2022 and 2023. The largest wage
 increases occurred in the Construction, Professional and Business and Other Services industries. At the same time, the Construction industry experienced the largest change in employment, decreasing by -11.7% during this time (but only -17 jobs).

Commuting Patterns

Proximity to employment is often a primary consideration when choosing where to live, since transportation costs often accounts for a large proportion of households' budgets. Table E-4 highlights the commuting patterns of workers in the City of Cambridge and Table E-5 shows commuting patterns in the PMA in 2021 (the most recent data available), based on Employer-Household Dynamics data from the U.S. Census Bureau.

- As shown in Table E-4, the work destination for about 23% of workers who live in the City of Cambridge was within the City itself. Among workers employed in the City of Cambridge, nearly 18% also live in the City.
- Other common work destinations for workers living in the City of Cambridge were the cities of Minneapolis (6.7%), Isanti (3.3%) and Coon Rapids (3.1%).
- Among those workers employed in the City of Cambridge, common home destinations include the cities of Isanti (5.8%) and North Branch (3.0%).

• Commuting patterns in the PMA are similar to the City of Cambridge, as shown in Table E-5. The most common work destination for workers who live in the Market Area was the City of Cambridge (14.6%). Other common work destinations for workers living in the Market Area were the cities of Minneapolis (6.2%), Isanti (3.6%) and St. Paul (3.2%).

 Among workers employed in the Market Area, the largest share (14.5%) lived in the City of Cambridge. Common home destinations for Market Area workers include the cities of Isanti (7.2%) and North Branch (2.6%).

Inflow/Outflow

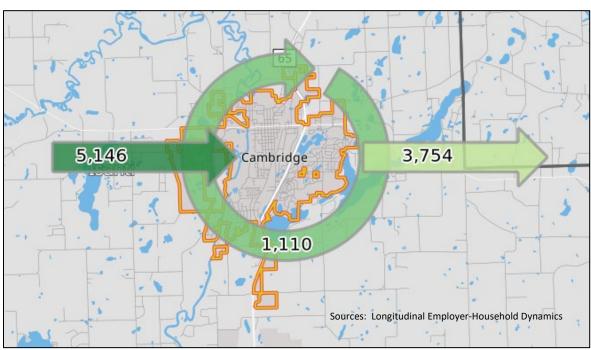

Table E-6 provides a summary of the inflow and outflow of workers in the City of Cambridge. Outflow reflects the number of workers living in the City of Cambridge but employed outside of the city. Inflow measures the number of workers that are employed in the City of Cambridge but live outside the City. Interior flow reflects the number of workers that both live and work in the City of Cambridge.

- The City of Cambridge was an importer of workers. There were 3,754 workers commuting out of the City, while 5,146 workers were commuting into the City of Cambridge and there were 1,110 interior workers living and working in the City.
- The largest segment of workers in each category were those between the ages of 30 and 54.
 Outflow workers had the largest proportion of workers under the age of 29 (26.2%) and the inflow workers had the largest proportion of workers over the age of 55 (27.4%).

- Outflow workers were the most likely to earn more than \$3,333 per month (54.4%) compared to 42% of interior workers.
- The All Other Services industry captured the most employment for all worker groups. Industries covered in the All Other Services category includes two-digits NAICS codes 51, 52, 53, 54, 55, 56, 61, 62, 71, 72, 81, 92. These sectors include, but are not limited to, Information, Finance, Insurance, Professional Services, Public Administration, Health Care, Social Assistance, Educational Services, Accommodation and Food Services.

Employment Inflow & Outflow, City of Cambridge

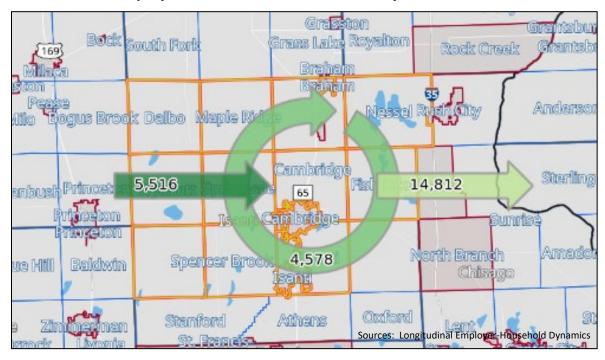

Table E-7 shows the inflow and outflow characteristics of the Primary Market Area.

- The Market Area is a net exporter of workers. There are approximately 10,000 inflow and interior flow workers, but nearly 15,000 outflow workers.
- Approximately half of workers in each category were between the age of 30 and 54.
- Similar to the City of Cambridge, outflow workers were the most likely to earn more than \$3,333 per month (60.7%) compared to 40.1% of interior workers. Interior workers had the highest proportion of workers earning under \$3,333 among the three commuter categories.
- The All Other Services industry was again the largest employment category in the Market Area.

Employment Inflow & Outflow, Primary Market Area

Covered Employment by Industry

Table E-8 presents covered employment workforce numbers for the City of Cambridge and Isanti County from 2005 through 2022. <u>Covered employment</u> data is calculated as an annual average and *reveals the number of jobs in the designated area*, which are covered by unemployment insurance. Many temporary workforce positions, agricultural, self-employed persons, and some other types of jobs are not covered by unemployment insurance and are not included in the table. Some agricultural businesses and employees are listed in Table E-8, but not all positions are included. The data is sourced from the Minnesota Department of Employment and Economic Development. The following are key trends from the covered employment data:

- Employment in the City of Cambridge rose by 16% (+913 employees) from 2010 to 2022. The Trade, Transportation and Utilities industry accounted for more than half (+508 employees) of the employment growth in the City during this time. In addition, the Construction industry more than doubled (+131%) during this time, adding 80 employees. The Leisure and Hospitality industry added 92 employees (+18%) from 2010 to 2022.
- The Education and Health Services industry is the largest employment industry in the City of Cambridge, although it has been decreasing since 2005. In 2005, the Education and Health Services representative 37% of employment compared to 30.9% in 2022.
- Market Area employment grew by 4.8% from 2005 to 2022. The Construction industry added 506 employees (+178.2%) and the Trade, Transportation and Utilities industry added 563 employees (+26.2%). At the same time, the Education and Health Services industry shrank by -10.2% (-384 employees).

Employer Survey

Maxfield Research and Consulting, LLC surveyed a sample of employer representatives from the City of Cambridge regarding recent trends in job growth, employee turnover, and projected job growth. In addition, representatives were asked about the impact of housing on their current and potential employees.

 Employers reported a variety of needs in staffing. Some employers that struggled with recruiting and retaining employers since the 2020 pandemic have experienced hiring easing and staffing levels being met.

- Other employers are experiencing higher turnover due to retirements and more employee
 mobility with an increase in job openings. This is leading to more difficulty recruiting and
 retain workers for some employers than prior to 2020. Additionally, employers relying on
 younger employees are also finding it difficult to staff all their positions.
- Employees at the city's largest employers were commuting from many areas. Outside of the City of Cambridge, employees were generally commuting from within 30 miles of Cambridge, including from Isanti, Princeton, North Branch, Harris, Stanchfield, Braham, Zimmerman, Mora, Bethel/East Bethel, Ogilvie, Pine City and Dalbo. Employees coming into Cambridge from the north may commute even further than 30 minutes, such as commuters from Hinckley.
- Some employers focus more recruiting efforts on areas north of Cambridge, moving away from the metro where wage expectations are higher.
- Employee feedback on housing included comments on rent and taxes being high. On the for-sale side there is a lack of affordable single-family housing and houses are under contract very quickly.

Major Employers

Table E-8 shows major employers in the City of Cambridge. It should be noted that this is not a comprehensive list of all employers in the city. The information on largest employers was gathered from the City of Cambridge, the East Central Development Partnership and Reference Solutions.

- School District #911 was the largest employer, with 992 employers. The Anoka Ramsey County Community College also employed an estimated 200 people in the education field.
- Six of the major employers were with 100 or more employees were retailers or restaurants, including Walmart, Fleet Farm, Menards, Target, Perkins and Cub Foods.
- Cambridge Medical Center employed 268 people in the health care field. Another 366
 workers were employed at GracePointe Crossing, a senior housing facility that also offers
 services to its residents.

Introduction

The variety and condition of the housing stock in a community provides the basis for an attractive living environment. Housing functions as a building block for neighborhoods and goods and services. We examined the housing market in the City of Cambridge and the Market Area by reviewing data on the age of the existing housing supply; examining residential building trends and reviewing housing data from the American Community Survey that relates to the Market Area.

Residential Building Permit Trends

Maxfield Research obtained data from the US Department of Housing and Urban Development on the number of building permits issued for new housing units in the City of Cambridge and Isanti County from 2000 to 2022. Tables HC-1 and HC-2 displays permits issued for single-family homes, duplexes, and multifamily dwellings for the City of Cambridge and Isanti County, respectively. Multifamily units include both for-sale (condominium, twinhomes, and townhomes) and rental projects. The following are key points about housing development since 2000.

- The City of Cambridge issued 2,155 permits from 2000 to 2022, averaging 94 permits per year. During this time, single family permits accounted for 74.7% permits.
- Of the 545 multifamily permits issued during the period from 2000 to 2022, 92.2% were for multifamily developments with five or more units.
- The impact of the Great Recession is clear in the permit data from the City of Cambridge.
 Permits dropped drastically from 2008 through 2011, before starting to edge up in the following years.
- Similarly, the City of Cambridge experienced rapid growth during the pandemic as 2021 was a record year for new construction. The work from home movement and desire more space and affordable housing drove building activity.
- Although single family permits have grown in the years since 2011, permits per year are not as high as in the early 2000 years.

Table HC-2 shows the number of permits issued from 2000 to 2022 in Isanti County.

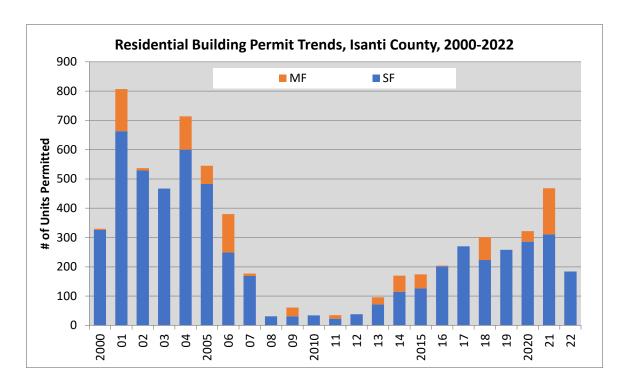

- Isanti County issued 6,603 permits from 2000 to 2022, averaging 287 permits per year. Single family permits accounted for 86% of permits in Isanti County during this time.
- Similar to Cambridge, the majority of multifamily permits (90.3%) were issued for units within buildings of five or more units.
- Trends from the Great Recession in Isanti County are similar to the City of Cambridge. Permit activity fell sharply from 2007 (169 permits) to 2008 (31 permits). Permits began to increase again in 2012 and even more so from 2012 to 2013.
- Permits have generally risen since 2012, with the County reporting 468 permits in 2021.
 However, the number of permits fell in 2022 to only 184, with no multifamily permits recorded.

• On average, the City of Cambridge has produced 34% of the residential permits is Isanti County. Although the proportion has ranged from 3% in 2008 to 60% in 2021.

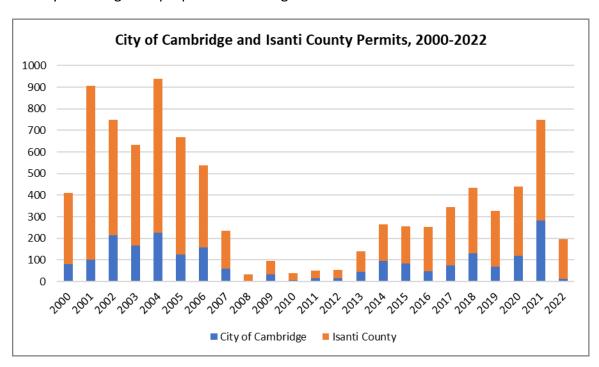

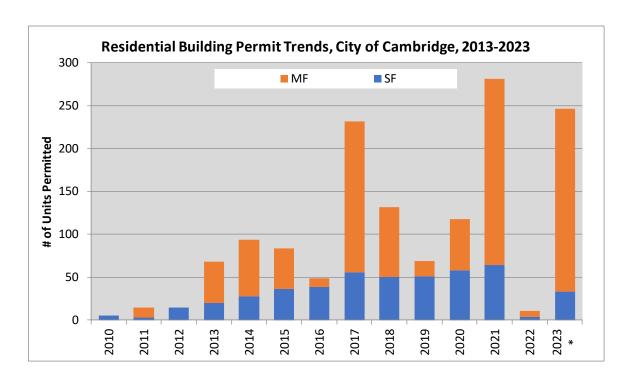

Table HC-3 shows the number of permits issued from 2013 to October 2023 in Cambridge per the City of Cambridge building department.

- There were 1,419 units permitted in the City of Cambridge from 2010 through mid-October 2023. Multi-family units made up 67.4% of units permitted during this time, totaling 957 units.
- Among the multi-family units permitted during this time, the majority were for apartment units. Apartment units accounted for 83% (794) of units permitted. The remaining 163 permits were issued for townhome or duplex units.
- Another 462 single family units have been permitted in the City of Cambridge since 2013.

American Community Survey

The American Community Survey ("ACS") is an ongoing statistical survey administered by the U.S. Census Bureau that is sent to approximately 3 million addresses annually. The survey gathers data previously contained only in the long form of the decennial census. As a result, the survey is ongoing and provides a more "up-to-date" portrait of demographic, economic, social, and household characteristics every year, not just every ten years. The most recent ACS highlights data collected between 2017 and 2021. Tables HC-4 to HC-9 show key data for the City of Cambridge, the Market Area and Secondary Market Area.

Age of Housing Stock

The following graph shows the age distribution of the housing stock in 2021 based on data from the U.S. Census Bureau and 2021 from the American Community Survey (5-Year). Table HC-4 includes the number of housing units built in the Market Area, prior to 1950 and during each decade since.

- In total, the Market Area is estimated to have 14,145 housing units, of which approximately 83.3% are owner-occupied and 16.7% renter-occupied.
- The median year housing was built in the PMA was 1988, with owner occupied homes (1988) and renter-occupied homes (1986) reported a similar median year built.

- In the City of Cambridge, the median year built was 1989, indicating a rather newer housing stock. There was a greater difference in the median year built in the owner-occupied homes (1992) and renter-occupied (1984) homes of the City of Cambridge compared to the PMA.
- There is a greater portion of renter-occupied housing in the City Cambridge (30.6%) compared to the PMA.
- The largest portion of housing was built between 2000 and 2010 in the PMA (24.8%) and the City of Cambridge (22.4%). In the State of Minnesota, 13.5% of housing was built from 2000 to 2010.
- Another 13.5% of housing in Cambridge was built after 2010, about twice the proportion of housing built in the State of Minnesota (6.7%) during the same period.

City of Cambridge Year Built of Residential Properties

Housing Units by Structure and Occupancy or (Housing Stock by Structure Type)

Table HC-5 shows the Market Area's housing stock by type of structure and tenure as of 2021

- The dominant housing type in Cambridge among owner-occupied homes is the single-family detached home, representing an estimated 80.5% of all owner-occupied housing units.
- In the City of Cambridge, the largest proportion of renter-occupied housing was in single family detached homes (23.5%) and buildings with 50 or more units (23.4%).

• Owner-occupied housing in the Market Area Remainder is concentrated within single-family detached homes (96.5%). In the Market Area Remainder 40.1% of renter occupied housing was in buildings with 20 to 49 units and 36.1% was within detached single family homes.

City of Cambridge Property Classification of Residential Properties

Owner-Occupied Housing Units by Mortgage Status

Table HC-6 shows mortgage status and average values from the American Community Survey for 2021 (5-Year). Mortgage status provides information on the cost of homeownership when analyzed in conjunction with mortgage payment data. A mortgage refers to all forms of debt where the property is pledged as security for repayment of debt. A first mortgage has priority claim over any other mortgage or if it's the only mortgage. A second (and sometimes third) mortgage is called a "junior mortgage," a home equity line of credit (HELOC) would also fall into this category. Finally, a housing unit without a mortgage is owned free and clear and is debt free.

- Approximately 69% of Cambridge homeowners have a mortgage. Comparatively, 70.6% of homeowners in the Market Area and 65.6% of homeowners in the State of Minnesota have a mortgage.
- The median value for homes with a mortgage for City of Cambridge homeowners is approximately \$199,300, compared to \$237,795 in the Market Area and \$260,500 in the State of Minnesota
- Homes without a mortgage had a lower median value (\$160,000) compared to those with a mortgage in the City of Cambridge.

Owner-Occupied Housing Units by Value

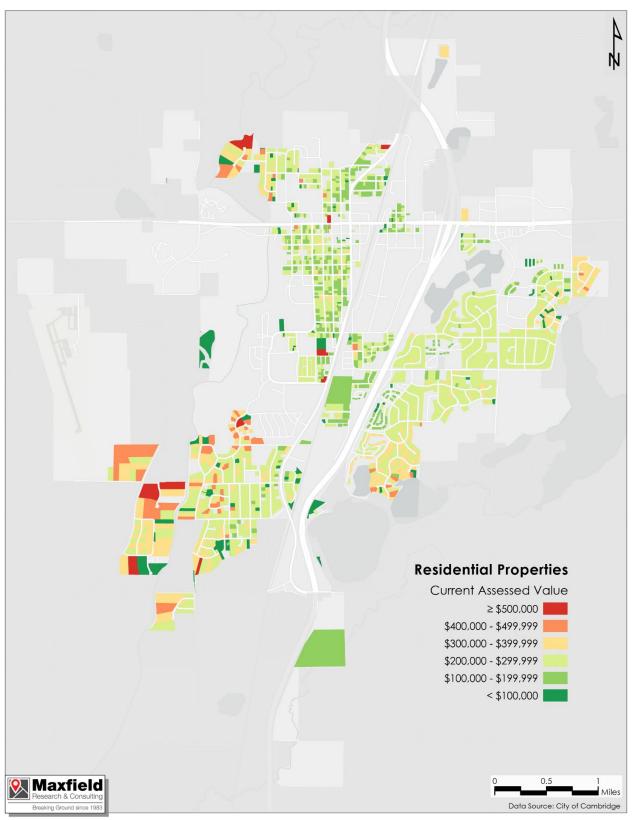

Table HC-7 presents data on housing values summarized by nine price ranges. Housing value refers to the estimated price point the property would sell if the property were for sale. For single-family and townhome properties, value includes both the land and the structure. For condominium units, value refers to only the unit.

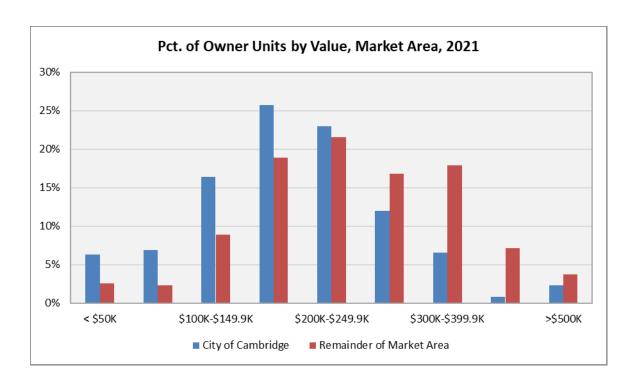

- The largest proportion of the owner-occupied housing stock in the City of Cambridge is estimated to be valued between \$150,000 and \$199,999 (25.7%) and \$200,000 to \$249,999 (23%).
- Housing values were more concentrated in the City of Cambridge compared to the State of Minnesota, where the four largest cohorts (\$150,000 to \$399,999) were separated by only 4.2%.

- The median value of owner-occupied homes in the City of Cambridge was \$187,500 compared to \$233,038 in the Market Area and \$250,200 in Minnesota.
- Homes in the Remainder of the Market Area were more likely to be valued over \$250,000 than homes in the City. In the City of Cambridge, 22% of owner-occupied homes were valued over \$250,000 compared to 46% of homes in the Remainder of the Market Area.

City of Cambridge Assessed Value of Residential Properties

Renter-Occupied Units by Contract Rent

Table HC-8 presents information on the monthly housing costs for renters called contract rent (also known as asking rent). Contract rent is the monthly rent agreed to regardless of any utilities, furnishings, fees, or services that may be included.

- The median contract rent in the City of Cambridge was \$976 on par with the median contract rent in the State of Minnesota, \$972. Based on a 30% allocation of income to housing, a household in Cambridge would need an income of about \$39,400 to afford the median monthly rent.
- The median rent for the Market Area was \$1,039, higher than both the City of Cambridge and the State of Minnesota.
- City of Cambridge renters paying cash rents were most likely to have monthly rents over \$1,000 per month (47.3%).
- Housing units without payment of rent ("no cash rent") accounted for 10% of rentals in the Remainder of the Market Area, while no such rentals were recorded in the City of Cambridge. Typically units may be owned by a relative or friend who lives elsewhere whom allow occupancy without charge. Other sources may include caretakers or ministers who may occupy a residence without charge.

Housing Units by Occupancy Status & Tenure

Tenure is a key variable that analyzes the propensity for householders to rent or own their housing unit. Tenure is an integral statistic used by numerous governmental agencies and private sector industries to assess neighborhood stability. Table HC-9 shows historic trends in 2010 and 2021.

- In 2021, 75.8% of homes in the Market Area were owner-occupied, a slight increase from 2010 when 73.1% of homes were owner-occupied. The proportion of renter households has remained nearly unchanged from 2010 to 2021, while the proportion of vacant homes has dropped from 11.0% in 2010 to 9.0% in 2021.
- The proportion of owner-occupied homes was lower in the City of Cambridge was 66.4% of households in 2021, an increase from 2010 when the proportion was 61.1%.
- Renter-occupied households fell slightly from 30.4% in 2010 to 29.3% in 2021 within the City of Cambridge. Meanwhile, vacant households in the City of Cambridge have fallen by more than half from 8.4% in 2010 to 4.3% in 2021.

Housing Characteristics Summary

- According to the City, there were 1,419 units permitted in Cambridge from 2010 through mid-October 2023. Multi-family units made up 67.4% of units permitted during this time, totaling 957 units. The remaining 462 permits were for single family units.
- Among the multi-family units, 83% (794) of units permitted were for apartments. The remaining 163 permits were issued for townhome or duplex units.
- Owner-occupied homes were newer in the City of Cambridge. Owner-occupied homes reported a median year built of 1992, compared to 1988 in the Market Area. Further, 35.9% of homes were built since 2000 compared to 20.2% of homes in the State of Minnesota.
- The majority of owner-occupied homes were within single-family detached homes (80.5%) in Cambridge. Meanwhile, renter occupied homes in the City of Cambridge were split between single-family detached homes (23.5%) and within buildings with more than 50 units (23.5%).
- Approximately 69% of homes in the City of Cambridge held a mortgage. These homes had a median value of \$199,300.
- Nearly half of all owner-occupied homes in the City of Cambridge were valued between \$150,000 and \$399,999.

HOUSING CHARACTERISTICS

- Median contract rent in the City of Cambridge was \$976, comparable to the median contract rent in the State of Minnesota (\$972).
- From 2010 to 2021, the proportion of owner-occupied homes rose in the City of Cambridge while vacant properties declined.

Introduction

For purposes of our analysis, rental properties are classified into two groups, general occupancy (all ages) and senior (age-restricted). All senior properties are included in the *Senior Housing Analysis* section of this report. The general occupancy rental properties are divided into three groups: market rate (those without income restrictions); affordable or shallow-subsidy housing (those receiving tax credits or another type of shallow-subsidy and where there is a quoted rent for the unit and a maximum income that cannot be exceeded by the tenant); and subsidized or deep-subsidy properties (those with income restrictions at 30% or less of AMI where rental rates are based on 30% of their gross adjusted income).

Overview of Rental Market Conditions

Maxfield Research utilized data from the American Community Survey (ACS) to summarize rental market conditions in Cambridge, Isanti County, the PMA, and Minnesota. The ACS is an ongoing survey conducted by the United States Census Bureau that provides data every year rather than every ten years as presented by the decennial census. We use this data because these figures are not available from the decennial census.

Table R-1, on the following page, presents a breakdown of median gross rent and monthly gross rent ranges by number of bedrooms in renter-occupied housing units from the 2018-2023 ACS in Cambridge, in comparison to Isanti County, the PMA, and Minnesota. Gross rent is defined as the amount of the contract rent plus the estimated average monthly cost of utilities (electricity, gas, and water and sewer) and fuels (oil, coal, wood, etc.) if these are paid by the renter.

- A median gross rent of \$1,207 was reported in Cambridge. Isanti Country had a median gross rent of \$1,161, which is less than Minnesota's overall median gross rent of \$1,178.
 The median gross rent for the PMA was \$1,193. However, the PMA's weighted median gross rent was calculated only with county subdivisions with available data (The majority of county subdivisions were missing data).
- Two-bedroom units were the most common unit type in Cambridge (63.7%), Isanti County (53.3%), and the PMA (55.4%), which are much higher than the State's proportion of two-bedroom units (37.1%).
- Cambridge's one-bedroom units made up 21.9% of its total units, its three or more-bedroom units made up 13.2% of its total units, and its units with no bedrooms (i.e., often studios) made up 1.2% of total units. In Minnesota, by contrast, one-bedroom units made up 32.8% of its total units, its three or more-bedroom units made up 22.9% of its total units, and its units with no bedrooms made up 7.2% of total units.

NA: Not Assessed.

Note: The PMA's median houshold income is weighted and only includes county subdivisions with available data.

Sources: American Community Survey; Maxfield Research and Consulting LLC.

Over two-thirds (68.7%) of units in Cambridge reported a gross rent of \$750 or more. In addition, 52.9% of one-bedroom units, 78.9% of two-bedroom units, and 45.8% of three-bedroom or more units reported rents of \$750 or more. Of units with no bedroom, 66.7% reported rents of \$750 to \$999 while 33.3% reported rents of \$300 to \$499.

Rental Licensing Program

The City of Cambridge adopted a rental registration program om 2017 to protect the public health, safety and welfare of the Cambridge community at large and specifically residents of rental properties. The Rental Registration program is meant to ensure that rental housing is decent, safe and sanitary. Along with being operated and maintained to prevent the development of nuisance, blight, deterioration, or disincentive to reinvest in the community.

To achieve this, the Rental Registration program requires owners register the property and identify a rental manager that the city may contact. The Rental Registration information must be posted in each rental unit. The City may inspect the property at the request of the tenant, owner, or neighborhood association to ensure compliance with the building code, fire code and the city's ordinance.

The Rental Registration program requires a registration fee of \$25 per unit, which expires on December 31 of all odd-numbered years. Some properties are exempt from the registration requirement. Properties where the owner is related to the tenant, the property owner occupied the property with two or fewer tenants and if the property is State registered or licensed facility or Public Housing Agency.

General-Occupancy Rental Projects

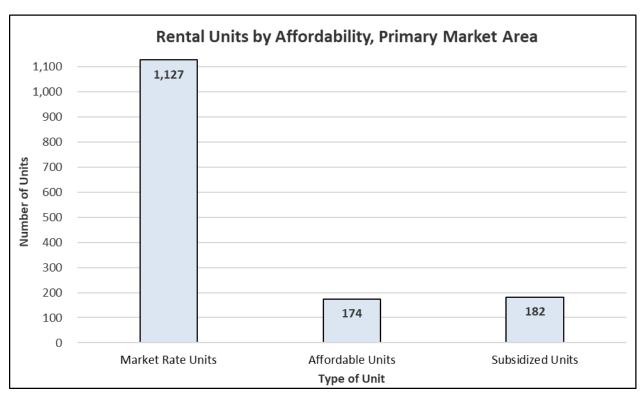

In February 2024, Maxfield Research and Consulting, LLC identified and surveyed rental properties in the PMA. Table R-2 summarizes general occupancy rental properties in the Market Area by address, city, year built, type of unit, and number of units. In addition, Table R-3 is a more detailed analysis of larger rental properties with 11 or more units while Table R-4 is a summary of Table R-3.

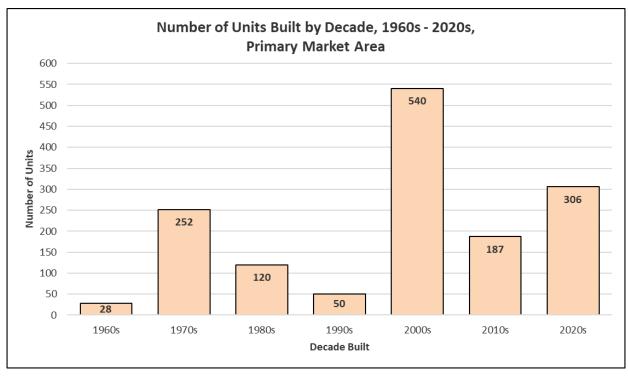

There are currently 32 general occupancy rental properties in the PMA. Of those 32 properties, 19 are market rate properties comprising 1,127 units, six properties with 174 units are affordable, and seven properties with 182 units are subsidized. In total, the properties represent a combined total of 1,483 units.

Of the 1,483 total rental units, over 36% (36.4%) of units were built in the 2000s, followed by the 2020s at 20.6%. In addition, the 2010s accounted for 12.6% of all built units in the PMA. The next highest decade for the number of units built was the 1970, with 17.0% of all units. Other decades, represented the following percentages: the 1980s, 8.1% of all built units; the 1990s, 3.4% of all built units; and the 1960s, 1.9% of all built units.

Table R-3 provides a more detailed look at rental properties and only includes developments with 11 or more units. At the time of our survey, there were 14 market rate properties in the Market Area (1,083 units), six affordable properties (174 units), and seven subsidized properties (195 properties). Vacancy rates were as follows: market rate units, 1.8% (20 vacant units); affordable units, 0% (no vacancies); and subsidized units, 0% (no vacancies).

Market Rate

- A total of twenty vacant units were found in market rate rental projects, resulting in a vacancy rate of 1.8% as of February 2024. Turnover at many apartments is primarily driven by residents purchasing homes or leaving the area for employment opportunities. Many tenants will stay in a unit for longer lease terms; especially older adults/seniors.
- Over 45% (45.2%) of the market rate rental projects surveyed are two-bedroom units. The breakout by unit type is summarized on the following page.

Studio units: 10.1%
 One-bedroom units: 24.0%
 Two-bedroom units: 45.2%
 Three-bedroom units: 20.8%

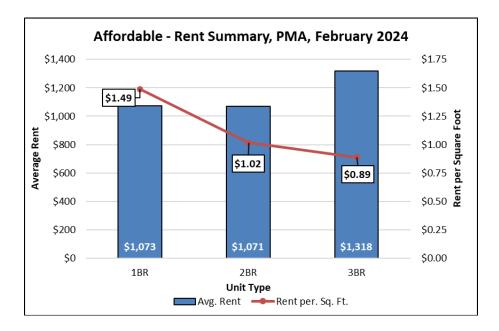

- The majority of surveyed properties have a common laundry room with coin-operated washers and dryers. However, newer properties offer in unit washer and dryers. In-unit washer and dryers have become the standard in new apartment developments.
- The newest general-occupancy market rate rental property is 601 17th Ave, which was completed in 2023 and includes 48 units. There is currently one vacancy for a vacancy rate of 2.1%. The square footages by unit type are as follows: studio units, 425 square feet; one-bedroom units, 700 square feet; and two-bedroom units, 950 square feet. Average rents by unit type are as follows: studio units, \$995 per month; one-bedroom units, \$1,250 per month; and two-bedroom units, \$1,395 per month. Water and trash are included in rent while the tenant is responsible for heat and any cable.

Affordable/Subsidized

There are a total of six properties that have income-restricted units in the Cambridge PMA.
 These properties total 369 income restricted units, including 174 affordable units and 195 subsidized units. At the time of our survey, no units were vacant, resulting in a vacancy rate of 0.0%. Typically, subsidized and affordable rental properties should be able to maintain vacancy rates of 3% or less in most housing markets.

• Main Street Flats (built in 2020), a Section 42 tax credit project, is the newest affordable housing development in Cambridge. Project amenities include a patio/balcony, central air, community room, playground, and in unit washer/dryer. Tenants at the property are responsible for gas and electric while the landlord pays garbage, water, and sewer.

• Information on the maximum allowable incomes by household size to qualify for affordable housing and maximum gross rents that can be charged by bedroom size in Isanti County can be found in the *Housing Affordability* section, found later in this report.

Natural Occurring Affordable Housing (e.g., Unsubsidized Affordable)

Although affordable housing is typically associated with an income-restricted property, there are other housing units in communities that indirectly provide affordable housing. Some housing units that were not developed or designated with income guidelines (e.g., assisted) yet are more affordable or as equally affordable than those with income restricted units in a community are considered "naturally-occurring" or "unsubsidized affordable" units. This rental supply is available through the private market, versus assisted housing programs through various government agencies. Property values on these units tend to be lower based on a combination of factors, such as: age of structure, location, condition, size, functional obsolescence, etc.

According to the *Joint Center for Housing Studies of Harvard University*, the privately unsubsidized housing stock supplies three times as many low-cost affordable units than assisted projects nationwide. Unlike assisted rental developments, most unsubsidized affordable units are scattered across small properties (one-to-four-unit structures) or in older multifamily structures. Many of these older developments are vulnerable to redevelopment due to their age, modest rents, and deferred maintenance.

Because many of these properties have affordable rents, project-based and private housing markets cannot be easily separated. Some households income-qualify for both market rate and project-based affordable housing. Therefore, it is important to identify the naturally-occurring affordable housing stock to quantify the proportion of renters that might be eligible for housing assistance based on income. Table R-5 illustrates maximum rent limits based on household size and area median income while table R-6 depicts maximum income limits based on household size and area median monthly income. Table R-7 estimates the number of affordable units needed by area median income (AMI). The section concludes with a summary table (R-8).

- Among the 1,109 market rate units inventoried by unit mix and monthly rents, 82.5% of the units are affordable to households at 50% AMI. Together with 11.4% of the units affordable at 60% AMI, nearly 94% (93.9%) of the market rate rental housing inventory is affordable to households with incomes between 50% and 60% AMI (See Table R-8).
- An estimated 32.3% of market rate one-bedroom units are affordable at 50% of AMI, 42.9% are affordable at 60% AMI, and 6.7% are affordable at 30% AMI (See Table R-8).
- Of two-bedroom units, 93.3% are affordable at 30% AMI, 42.2% are affordable at 50% AMI, 11.1% are affordable at 60% AMI, and 56.6% are affordable at 80% AMI. (See Table R-8).
- An estimated 4.8% of the inventoried market rate units have monthly rents that would be affordable to households earning 80% of AMI. These households would qualify for "workforce" housing. Note that no inventoried market rate units have monthly rents affordable to households earning 100% or 120% of AMI.

Planned and Proposed Housing Developments

Maxfield Research obtained data from the Cities of Cambridge, Isanti, and Braham in order to identify housing developments under construction, planned, or pending. As of February 2024, there are two multifamily developments under consideration in the City of Cambridge. Table P-1, on the following page displays pending rental data.

- There were two multifamily developments under construction in the City of Cambridge at the time of the study.
- *Bridgewell* is a 65-unit affordable apartment community under development by Reuter Walton. The development is nearing completion and is expected to open in April 2024.
- Strong Oak Apartments is under construction by BJ Baas Builders on Old South Main St and estimated to be completed in 2025. The development is expected to have 148 market rate units.
- There are two approved apartment developments in the City of Isanti which will deliver 215 market rate apartments to the City upon completion. The *Whiskey Road Apartments* will have two 28-unit buildings and two garage buildings. The *Park Brook Apartments* will split the 157 units into one 49-unit building and three 36-unit buildings.

Senior Housing Defined

Senior housing is a concept that generally refers to the integrated delivery of housing and services to seniors. However, as Figure 1 illustrates, senior housing embodies a wide variety of product types across the service-delivery spectrum.

	CON	ITINUUM OF HOUSI	NG AND SERV	ICES	FOR SENIO	ORS			
Single-Family Home	Villa, Townhome or Apartment	Independent Living Service	•		Living/	sisted Enhance ed Livin		Nursing Fac	ilities
	Age-Restricted Inde Family, Townhom Condominiums,	es, Apartments,	Independe Intensiv		•		(Al	demory Care zheimer's and mentia Units)	
Fully ndependen t Lifestyle									Fully or Highly Dependent
Source: Maxfiel	d Research & Consultin	g, LLC	Senior	Hous	sing Produ	ct Type			

Products range from independent apartments and/or townhomes with virtually no services on one end, to highly specialized, service-intensive assisted living units or housing geared for people with dementia-related illnesses (termed "memory care") on the other end of the spectrum.

In general, independent senior housing attracts people 65 and older while assisted living typically attracts people 80 and older who need assistance with activities of daily living (ADLs). For analytical purposes, Maxfield Research and Consulting, LLC classifies senior housing into five primary categories based on the level and type of services offered as described in the following figure.

Active Adult properties (or independent living without services available) are similar to a
general-occupancy building, in that they offer virtually no services but have age-restrictions
(typically 55 or 62 or older). Residents are generally age 70 or older if in an apartment-style
building. Organized entertainment, activities and occasionally a transportation program
represent the extent of services typically available at these properties. Because of the lack
of services, active adult properties generally do not command the rent premiums of more
service-enriched senior housing. Active adult properties can have a rental or owner-occupied (condominium or cooperative) format.

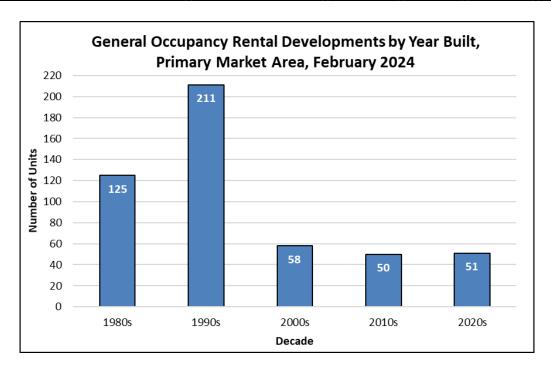

- <u>Independent Living</u> properties (or independent living with services available) offer support services such as meals and/or housekeeping, either on an optional basis or a limited amount included in the rent. These properties often dedicate a larger share of the overall building area to common areas, in part, because the units are smaller than in adult housing and in part to encourage socialization among residents. Independent living properties attract a slightly older target market than adult housing, typically seniors 75 or older. Rents are also above those of the active adult buildings. Sponsorship by a nursing home, hospital or other health care organization is common.
- <u>Assisted Living</u> properties come in a variety of forms, but the target market for most is generally the same: very frail seniors, typically age 80 or older (but can be much younger, depending on their particular health situation), who need extensive support services and personal care assistance. Absent an assisted living option, these seniors would otherwise need to move to a nursing facility. At a minimum, assisted living properties include two meals per day and weekly housekeeping in the monthly fee, with the availability of a third meal and personal care (either included in the monthly fee or for an additional cost). Assisted living properties also have either staff on duty 24 hours per day or at least 24-hour emergency response.
- Memory Care properties, designed specifically for persons suffering from Alzheimer's disease or other dementias, is one of the newest trends in senior housing. Properties consist mostly of suite-style or studio units or occasionally one-bedroom apartment-style units, and large amounts of communal areas for activities and programming. In addition, staff typically undergoes specialized training in the care of this population. Because of the greater amount of individualized personal care required by residents, staffing ratios are much higher than traditional assisted living and thus, the costs of care are also higher. Unlike conventional assisted living, however, which addresses housing needs almost exclusively for widows or widowers, a higher proportion of persons afflicted with Alzheimer's disease are in two-person households. That means the decision to move a spouse into a memory care facility involves the caregiver's concern of incurring the costs of health care at a special facility while continuing to maintain their home.
- <u>Skilled Nursing Care, or long-term care</u> facilities, provides a living arrangement that integrates shelter and food with medical, nursing, psychosocial and rehabilitation services for persons who require 24-hour nursing supervision. Residents in skilled nursing homes can be funded under Medicare, Medicaid, Veterans, HMOs, and private insurance as well as use of private funds.

Senior Housing in the City of Cambridge

As of February 2024, Maxfield Research and Consulting, LLC identified twelve senior housing developments in the PMA. Combined, these projects contain a total of 485 units. Table S-1 provides a general overview of information on all inventoried senior housing projects in Cambridge. Information in the table includes address, year built, number of units, and number of units. Table S-2 provides a more detailed analysis of senior properties in the market area with vacancies, unit mixes, square footages, monthly rents, and amenities/additional comments.

The following are key points from our survey of the senior housing supply.

The following are key points from our survey of the senior housing supply.

Market Rate Active Adult Senior Housing

- There are a total of 192 market rate active adult units across four properties in the PMA. As of February 2024, no vacant units were identified indicating pent-up demand for affordable/subsidized senior rental units.
- Rents range from \$1,115 for a one bedroom unit at Riverwood Village to \$2,350 for a two bedroom townhome unit at GracePointe Crossing: Village Townhomes.
- Square footages range from 518 square feet for a one bedroom unit to 1,702 square foot for a 1,702 two bedroom townhome unit at GracePointe Crossing: Village Townhomes.

For-Sale Active Adult

- There is one owner-occupied senior housing development, East Terrace Cooperative, which accounts for 38 total units. At the time of survey, no units were listed for-sale. Generally a healthy senior housing market will have a vacancy rate of around 5.0% in order to allow for sufficient consumer choice and turnover.
- Sales transactions prices (share costs) at East Terrace Cooperative are \$45,455 for a one-bedroom unit and \$83,556 for a two-bedroom unit.
- East Terrace Cooperative is a limited equity cooperative. Cooperative products involve purchasing a unit (or share) and then paying monthly fees which includes all utilities, of property and commons areas, and future building maintenance. Monthly costs for one-bedroom units are \$1,085 for one bedroom units and \$1,858 for two bedroom units.

Affordable Active Adult Senior Housing

- Affordable active adult units are income and age restricted. Residents must make at or below a specific income to qualify. There are no subsidized active adult units in the PMA.
- There are a total of 24 units in the one subsidized senior property, Ashland Place Apartments.
- As of February 2024, no vacant units are identified indicating pent-up demand for affordable senior rental units.
- All units are one bedroom units, are 570 square feet, and rent for \$978 a month.

Independent Living

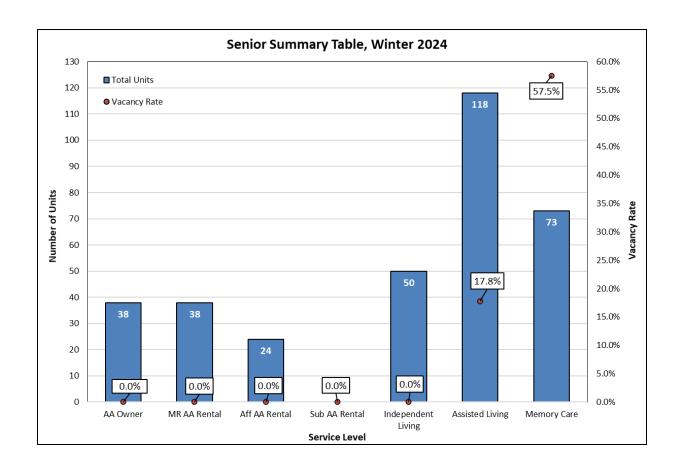

- There are a total of 50 units in the one independent living property, GracePointe Crossing:
 The Terrace. As of February 2024, no vacant units are identified indicating pent-up demand for affordable senior rental units.
- Units range from 765 square feet for one bedroom units to 1,295 square feet for two bedroom units.
- Prices range from \$2,085 for one bedroom units to \$3,315 for two bedroom units.

Assisted Living

- In the PMA, there are a total of three assisted living facilities with 118 units with a vacancy rate of 17.8% (21 units). This is well above 7.0%, which is considered the market equilibrium vacancy rate for assisted living and memory care housing.
- The newest project in Cambridge is Rosewood Senior Living. The project was built in 2002 and includes 20 units. The other two properties GracePoint Crossing: Commons Assisted Living (62 units) and Elmhurst Commons (36 units) opened in 1999 and 1998, respectively. The assisted living design preference today is apartment-style units versus suite-style units that tend to cater to more frail seniors. However, Rosewood Senior Living only includes suite options while GracePointe Crossing: Commons Assisted Living offers both suite and apartment style units.

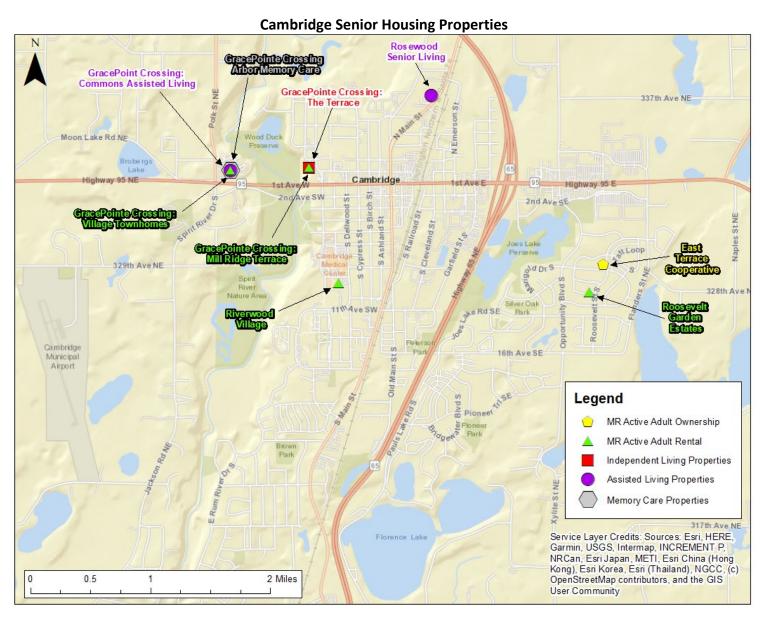

Memory Care

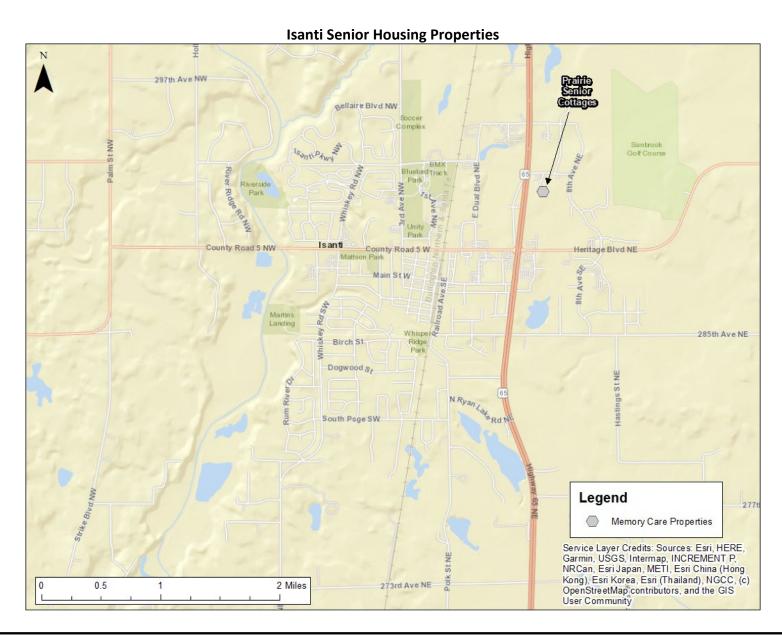

- A total of two memory care facilities, Prairie Senior Cottages (54 units) and GracePointe Crossing: Arbor Memory Care (19 units) with 73 units are located in PMA. The memory care vacancy rate is approximately 57.5% as of February 2024. However, note that all 42 vacancies are at Prairie Senior Cottages while GracePointe Crossing: Arbor Memory Care has no vacancies.
- GracePointe Crossing: Arbor Memory Care opened in 1999 and is the newest senior housing development in the PMA. Prairie Senior Cottages opened in 1998.
- Average base monthly fees at GracePointe Crossing: Arbor Memory Care start at \$3,590 a month for a studio units which range from 396 square feet to 422 square feet. One bedroom units are \$3,995 a month and 501 square feet.
- At Prairie Senior Cottages rents range from \$6,990 to \$11,760 a month for one bedroom units. Two bedroom units utilize elderly waivers.

Introduction

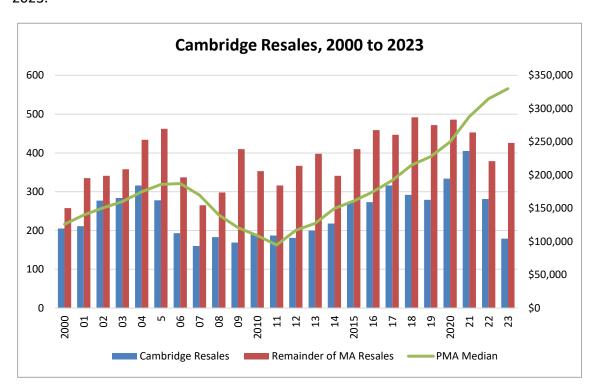

Maxfield Research & Consulting, LLC analyzed the for-sale housing market in Cambridge by analyzing data on single-family and multifamily home sales, active listings, lot supply, and the actively marketing subdivisions in Cambridge.

Overview of For-Sale Housing Market Conditions

Table FS-1 presents home resale data on single-family and multifamily housing in the Cambridge Market Area from 2000 through 2023. The data was obtained from the Regional Multiple Listing Services of Minnesota and shows annual number of sales, median and average pricing, and sales distribution by single-family and multifamily housing.

The following are key points observed from our analysis of this data.

- Median sales price trends highlight the effects of the Great Recession on sales prices in the Market Area. Median sales price rose from 2000 through 2006, before declining each year from 2007 to 2011. By 2011, the median sales price had dropped to \$95,000 from \$187,350 in 2006.
- Median sales prices have been recovering from the Recession in the Market Area. In 2017, median prices eclipsed the 2006 median sales price for the first time. Since 2017, median sales prices have continued to climb with the median resale price reaching \$330,000 in 2023.

- From 2000 to 2023, Cambridge averaged 245 resales per year with a total of 5,885 resales during this period. Single family homes represented 85% of resales in Cambridge.
- Resales peaked during the pandemic housing boom. There were 334 resales in 2020 and 405 resales in 2021. By 2022, resales had fallen to 281 and dropped further in 2023 to 179. This decline is related to the lack of supply and rising interest rates.

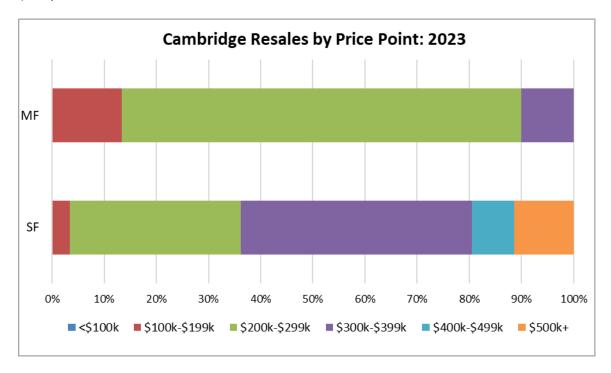

TABLE FS-1 RESALE TRENDS PRIMARY MARKET AREA 2000 to 2023

Home Resales by Price Point

Table FS-2 shows the distribution of sales within nine price ranges from resales in 2023. The graph on the following page visually displays the sales data.

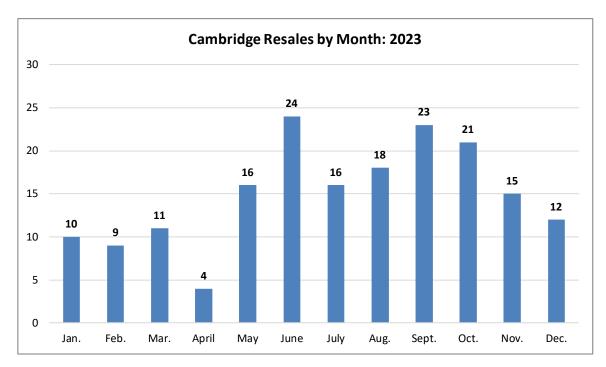

- About 40% of sales in 2023 were priced between \$200,000 and \$299,999, including more than three-fourths of multifamily homes sold in 2023.
- Another 39% of homes sold in Cambridge in 2023 were price between \$300,000 and \$399,999.

- The median value of multifamily homes sold in 2023 was \$233,000, while the median sold price of single-family homes was \$315,000.
- Single-family homes accounted for the majority of the resale market in the City of Cambridge, representing 83% of all resales in 2023.

• The months of June and September recorded the largest number of sales in 2023, with 24 and 23 sales, respectively.

Current Supply of Homes on the Market

To more closely examine the current market for available owner-occupied housing in the City of Cambridge, we reviewed the current supply of homes on the market (listed for sale). Tables FS-3 through FS-5 homes shows currently listed for sale in the City of Cambridge. The data was provided by the Regional Multiple Listing Services of Minnesota and is based on active listings in January of 2024. MLS listings generally account for the vast majority of all residential sale listings in a given area.

Table FS-3 shows the number of listings by price point, while Table FS-4 and FS-5 shows listings by home style. The following points are key findings from our assessment of the active single-family and multifamily homes listed in the City of Cambridge.

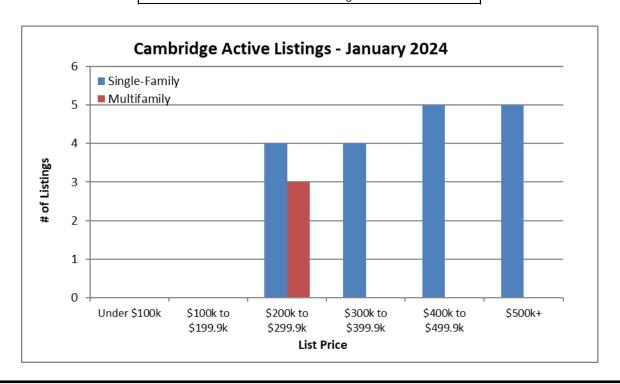

- There were 21 active listings in the City of Cambridge in January 2024. Single-family properties accounted for 18 of the 21 listings.
- The median sale price is generally a more accurate indicator of housing values in a community than the average sale price. Average sale prices can be easily skewed by a few very high-priced or low-priced home sales in any given year, whereas the median sale price better represents the pricing of a majority of homes in a given market. The median listing price was \$418,890 in January 2024 for active single-family listings and \$294,500 for active multifamily listings in the City of Cambridge.
- There were no active listings, single family or multifamily, priced below \$200,000 at the time of our survey. All the active multifamily listings fell within the range of \$200,000 to \$300,000.
- There were five active home listings priced above \$500,000 in the City of Cambridge, representing nearly 28% of active listings at the time of the survey.
- Based on a median list price of \$418,890 for single-family listings, a household would need an income of between \$113,160 and \$150,880 in order to afford to make monthly housing payments (accounting for 30% to 40% of income) of about \$3,772 (assuming a 10% down payment, 7.0% 30-year fixed mortgage, property taxes, insurance, and PMI). A household with significantly more equity (in an existing home and/or savings) could put more than 10% down and afford a higher priced home.

- Table FS-5 shows the active listings by type. The single-family listings consisted of seven one story homes and six two-story homes. The remaining five listings were divided between 1.5-story homes and split entry homes.
- The average listing for one-story homes were listed was 1,952 sq ft, three bedrooms and two bathrooms for \$468,354. The average year one story homes were built was 2001.
- The average listing for a two-story homes was 2,215 sq ft, four bedrooms and three bathrooms for \$463,167. The average year one-story homes were built was 1979.
- The townhome active listings were, on average, smaller than the single-family homes listed for sale with an average of 1,931 sq ft. Townhomes averaged three bedrooms and two bathroom, with average year built on 2023 (i.e., new construction).

New Construction Housing Activity

Maxfield Research & Consulting, LLC obtained lot inventory and subdivision data from Metro Study, a homebuilding consulting company that maintains a database of all subdivision activity in the Greater Twin Cities Metro Area. Tables FS-6 to FS-10 provide a variety of information on the new construction market in Cambridge and the PMA.

The following terms are used in the lot inventory tables:

- ▶ Annual Starts and Closings: The sum of activity for the most recent four quarters.
- ▶ <u>Closing</u>: Defined as when a "move in" has occurred and the home is occupied.
- <u>Future Lots Inventory</u>: Future lots are recorded after a preliminary plat or site plan has been submitted for consideration by the city.
- Lot Front: Range of all lot sizes within the subdivision; based on the lot front foot width
- Occupied: A buyer has taken possession of the home that was previously under construction or a model home.
- ▶ <u>Price</u>: Range of all base home price offered within the subdivision
- ▶ <u>Starts</u>: The housing slab or foundation has been poured.
- ▶ <u>Total Lots</u>: A summation of all lots platted in a subdivision, including those closed, under construction, and vacant.
- ▶ <u>Vacant Developed Lot (VDL):</u> The subdivision is considered developed after subdivision streets are paved and vehicles can physically drive in front of the lot.

Lot Supply by Lot Size

FS-6 depicts trends in new single-family home construction based on lot size (i.e., front footage). The data is current as of fourth quarter 2023 for Cambridge, Isanti County, and the Twin Cities Metro Area and is broken down by eight different lot size categories.

- Within Cambridge, the vast majority of lot closings have been with larger lot sizes between 100 and 109 feet. Approximately 60% of all lot closings over the past year have fallen into this category that is generally considered an executive lot today. Compared to the Twin Cities, these lot sizes are significantly higher.
- Lot sizes have decreased since the Great Recession as developers have sought to maximize density to keep housing more affordable. About 36% of lot closings in the Greater Metro Area in the past year have been on lots between 60 feet and 69 feet. Only 10% of lots in the Greater Twin Cities Area were over 100 feet wide.
- Isanti County lot closings over the past year fell into two distinct categories: 60 to 69 (36%) and 100 to 109 feet (49%). The next largest category is over 110 feet (6%).

New Construction Pricing (Detached Housing Units)

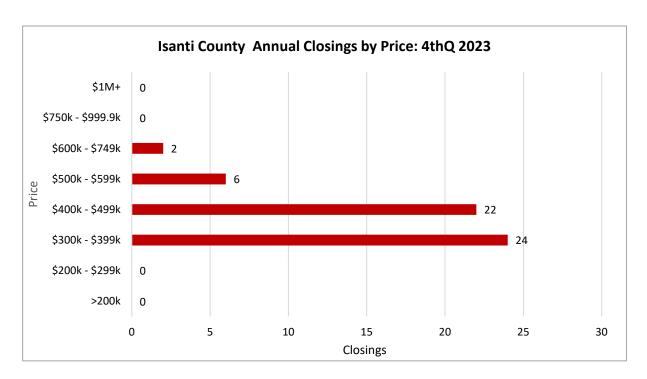

Table FS-7 depicts new construction inventory for detached housing units in Cambridge compared to Isanti County and the Metro Area. The table depicts quarterly and annual starts, finished vacant lots, number of homes under construction and homes previously built, and the number of vacant lots. All of these attributes are provided based on the estimated sales price of the home. Key findings follow.

- Three-quarters of new construction closings in Cambridge have been priced between \$300,000 and \$400,000. This compares to only 12% in the Greater Metro Area and 44% in Isanti County.
- The remaining new single-family construction in Cambridge falls within \$400,000 to \$500,000. No new construction subdivisions were above \$500,000 during the survey.
- Nearly 85% of the single-family new construction in Isanti County falls between \$400,000 and \$600,000. About 15% is priced above \$500,000 in Isanti County.
- About 36% of the new construction in the Greater Twin Cities is priced between \$400,000 and \$500,000. Another 26% is priced from \$500,000 to \$600,000. Together, about 62% is priced between \$400,000 and \$600,000.
- Roughly 26% of all new construction in the Greater Twin Cities is priced over \$600,000;
 whereas only 12% is priced under \$400,000.

Actively Marketing Subdivisions

Tables FS-8 and FS-9 show an inventory of detached and attached lots within platted subdivisions in Cambridge and the PMA. The tables provide information on the initial date the subdivision became active, product type, lot sizes, typical base pricing, starts and closings, and the lot inventory. Please note: not all of the subdivisions may be actively marketing but may simply have available lots for future development.

- Table FS-8 identifies eight single-family subdivisions with available lots in Cambridge. Based on these subdivisions, there are 120 vacant developed lots as of 4th quarter 2023. However, there are another nearly 300 future lots in the same subdivisions.
- Three of these subdivisions were platted in the last year, whereas the remaining five subdivisions were most platted back in the early 2000s. The newer subdivisions have smaller lot sizes compared to existing subdivisions.
- Although there were only eight closings in the subject subdivisions, there were 21 housing starts. Generally, housing starts have continued to decline due to rising interest rates and continued rate hikes by the Federal Reserve, however builders are increasing production to meet demand due to the low supply of homes available from the resale market.
- Over the past year, the average sale prices of a single family home Cambridge has between about \$334,000 with an average finished square footage of 2,145 square feet, or about \$217PSF. At the same time, the average sale prices of a townhome in Cambridge has between about \$281,000 with an average finished square footage of just over 2,000 square feet, or about \$143PSF.
- Compared to single-family, there are few new construction attached products marketing in Cambridge. There are only five actively marketing attached subdivisions in Cambridge boasting a total of 161 vacant developed lots. Given high inflation and rising mortgage rates, the demand for townhome style units will continue to grow as buyers seek out affordability.

Vacant Lot Inventory & Active Subdivisions

Maxfield Research & Consulting inventoried vacant lots in newer subdivisions (i.e., non-infill lots) and identified actively marketing subdivisions in Cambridge (per Isanti County GIS). Please note, due to different data sources and the time to record a closing, the vacant lot numbers do not align with the previous table. Table FS-10 on the following page summarizes vacant lots by subdivision.

- Among the newer active subdivisions, there are 165 vacant lots across 17 subdivisions as of the fourth quarter of 2023. Among the subdivisions with vacant lots, there are a mix of single-family homes, attached townhomes and detached townhomes.
- The average lot size across all subdivisions was 0.28 acres. There were two subdivisions, Samson Acres and Tamarack Ridge River, offering lots with four or more acres.
- Many of the active subdivisions have fewer than five lots left. Only five subdivisions, Cambridge Cove, Maple Ridge, Oak Meadows, Parkwood Southeast (townhomes) and Townhouses at Joe's Lake PUD 2nd, have more than three lots remaining. All these subdivisions are offering new townhomes.
- The average lot value among active subdivisions is \$13,299. In the five subdivisions with the
 majority of available lots, four have an average lot value was lower than the overall lot
 value average.
- The average assessed home value was \$193,700. With home values ranging from \$73,800 to \$1,162,100.

Realtor Input

Maxfield Research & Consulting reached out to local Realtors to solicit input on the Cambridge hosing market. The following summarizes key findings.

- The local real estate market continues to be a sellers' market in Cambridge, as all Realtors survey indicated that there was an undersupply of homes on the market.
- Realtors were asked to identify the price ranges for entry level, move up and executive level single family homes. In general, entry level homes were determined to cost about \$300,000, move up homes had a price of \$400,000 and executive level home were estimated to cost \$500,000 or more.
- In the townhome market, entry level homes are expected to be priced at \$200,000, move up townhomes were estimated to be in the range of \$300,000 and executive townhomes were estimated to have a cost of \$500,000.
- Local realtors express a difference of opinion on the availability of lots in Cambridge. Approximately 57% of responses stated a lack of lots, while 42% indicated there were enough lots platted and ready to build in the area.
- In the Cambridge area, couples with children (whether married or unmarried) are the primary household type among those actively looking for homes in the Cambridge area, followed by couples (whether married or unmarried) without children.
- Realtors identified entry-level single-family homes and move-up single-family homes as the housing type the area most needs.
- Through 2024, Realtors estimate that median sales prices, supply and resales will all increase, while mortgage rates and days on market with either decrease or remain stable.
- Potential barriers to new housing supply in the Cambridge market based on our survey
 of Realtors in the area include home prices that are too high for the average homebuyer, coupled with higher interest rates and city taxes.

Introduction

Affordable housing is a term that has various definitions according to different people and is a product of supply and demand. According to the U.S. Department of Housing and Urban Development (HUD), the definition of affordability is for a household to pay no more than 30% of its annual income on housing (including utilities). Families who pay more than 30% of their income for housing (either rent or mortgage) are considered cost burdened and may have difficulty affording necessities such as food, clothing, transportation and medical care.

Generally, housing that is income-restricted to households earning at or below 80% of Area Median Income (AMI) is considered affordable. However, many individual properties have income restrictions set anywhere from 30% to 80% of AMI. Rent is not based on income but instead is a contract amount that is affordable to households within the specific income restriction segment. Moderate-income housing, often referred to as "workforce housing," refers to both rental and ownership housing. Hence the definition is broadly defined as housing that is income-restricted to households earning between 50% and 120% AMI. Figure 1 below summarizes income ranges by definition.

FIGURE 1 AREA MEDIAN INCOME (AMI) DEFINITIONS										
Definition	AMI Range									
Extremely Low Income	0% - 30%									
Very Low Income	31% - 50%									
Low Income	51% - 80%									
Moderate Income Workforce Housing	80% - 120%									
Note: Isanti County 4-person AMI = \$124,900 (2023).										

Naturally-Occurring Affordable Housing (i.e., Unsubsidized Affordable)

Although affordable housing is typically associated with an income-restricted property, there are other housing units in communities that indirectly provide affordable housing. Housing units that were not developed or designated with income guidelines (i.e., assisted) yet are more affordable than other units in a community are considered "naturally-occurring" or "unsubsidized affordable" units. This rental supply is available through the private market, versus assisted housing programs through various governmental agencies. Property values on these units are lower based on a combination of factors, such as: age of structure/housing stock, location, condition, size, functionally obsolete, school district, etc. Because of these factors, housing costs tend to be lower.

According to the *Joint Center for Housing Studies of Harvard University,* the privately unsubsidized housing stock supplies three times as many low-cost affordable units than assisted projects nationwide. Unlike assisted rental developments, most unsubsidized affordable units are

scattered across small properties (one to four unit structures) or in older multifamily structures. Many of these older developments are vulnerable to redevelopment due to their age, modest rents, and deferred maintenance.

Because many of these housing units have affordable rents, project-based and private housing markets cannot be easily separated. Some households (typically those with household incomes of 50% to 60% AMI) income-qualify for both market rate and project-based affordable housing.

Rent and Income Limits

Table HA-1 shows the maximum allowable incomes by household size to qualify for affordable housing and maximum gross rents that can be charged by bedroom size in Pennington County. These incomes are published and revised annually by the Department of Housing and Urban Development (HUD) and also published separately by the Minnesota Housing Finance Agency based on the date the project was placed into service. Fair market rent is the amount needed to pay gross monthly rent at modest rental housing in a given area. This table is used as a basis for determining the payment standard amount used to calculate the maximum monthly subsidy for families at financially assisted housing.

Table HA-2 shows the maximum rents by household size and AMI based on income limits illustrated in Table HA-1. The rents on Table HA-2 are based on HUD's allocation that monthly rents should not exceed 30% of income. In addition, the table reflects maximum household size based on HUD guidelines of number of persons per unit. For each additional bedroom, the maximum household size increases by two persons.

Housing Cost Burden

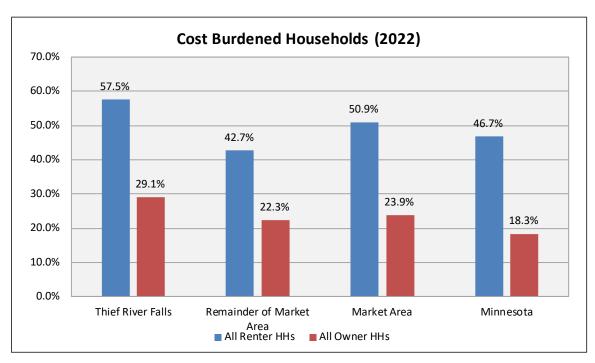

Table HA-3 shows the number and percentage of owner and renter households in the Cambridge Market Area that pay 30% or more of their gross income for housing. This information was compiled from the American Community Survey 2021 estimates. This information is different than the 2000 Census which separated households that paid 35% or more in housing costs. As such, the information presented in the tables may be overstated in terms of households that may be "cost burdened." The Federal standard for affordability is 30% of income for housing costs. Without a separate break out for households that pay 35% or more, there are likely a number of households that elect to pay slightly more than 30% of their gross income to select the housing that they choose. Moderately cost-burdened is defined as households paying between 30% and 50% of their income to housing; while severely cost-burdened is defined as households paying more than 50% of their income for housing.

Higher-income households that are cost-burdened may have the option of moving to lower priced housing, but lower-income households often do not. The figures focus on owner households with incomes below \$50,000 and renter households with incomes below \$35,000.

Key findings from Table HA-3 follow.

- About 29% of owner households and 58% of renter householders are estimated to be paying more than 30% of their income for housing costs in the City of Cambridge. The percentage of cost burdened owner households in the Market Area is lower compared to the city. The Market Area cost burdened households are 22% for owner households and 64% for renter households.
- There was a higher proportion of cost burdened households in the City of Cambridge and the Market Area compared to the State of Minnesota where 18% of owner households and 57% of renter households are considered cost burdened.
- The number of cost burdened households in Cambridge increases for lower income households. About 82% of renters with incomes below \$35,000 and 67% of owners with incomes below \$50,000 are cost burdened in the City of Cambridge.
- The proportion of cost burdened lower income owner households is similar in the City of Cambridge and the State of Minnesota. However, the proportion of cost burden low income renter households was lower in the State of Minnesota (47%) compared to the City of Cambridge.

Housing Costs as Percentage of Household Income

Housing costs are generally considered affordable at 30% of a households' adjusted gross income. Table HA-4 on the following page illustrates key housing metrics based on housing costs and household incomes in the Cambridge Market Area. The table estimates the percentage of Cambridge Market Area householders that can afford rental and for-sale housing based on a 30% allocation of income to housing. Housing costs are based on averages in Cambridge.

The housing affordability calculations assume the following:

For-Sale Housing

- 10% down payment with good credit score
- Closing costs rolled into mortgage
- 30-year mortgage at 7.00% interest rate
- Private mortgage insurance (equity of less than 20%)
- Homeowners insurance for single-family homes and association dues for townhomes
- Owner household income per 2022 ACS

Rental Housing

- Background check on tenant to ensure credit history
- 30% allocation of income
- Renter household income per 2022 ACS

Because of the down payment requirement and strict underwriting criteria for a mortgage, not all households will meet the income qualifications as outlined above.

- About 47% of Cambridge PMA households could afford to buy an entry-level home (\$275,000) in Cambridge. Furthermore, about 57% of existing owner households could afford to purchase a home of \$275,000.
- About 52% of existing renter households can afford to rent a one-bedroom unit in Cambridge (approx. \$925/month). The percentage of renter income-qualified households decreases to roughly 36% that can afford an existing three-bedroom unit (approx. \$1,350/month). Furthermore, about 39% of renters could afford to rent a one-bedroom apartment at \$1,250 per month within a new development.

Introduction

Previous sections of this study analyzed the existing housing supply and the growth and demographic characteristics of the population and household base in the Cambridge Market Area. This section of the report presents our estimates of housing demand in the Cambridge Market Area and City of Cambridge from 2024 through 2035.

Demographic Profile and Housing Demand

The demographic profile of a community affects housing demand and the types of housing that are needed. The housing life-cycle stages are:

- 1. Entry-level householders
 - Often prefer to rent basic, inexpensive apartments
 - Usually singles or couples in their early 20's without children
 - Will often "double-up" with roommates in apartment setting
- 2. First-time homebuyers and move-up renters
 - Often prefer to purchase modestly priced single-family homes or rent more upscale apartments
 - Usually married or cohabiting couples, in their mid-20's or 30's, some with children, but most are without children
- 3. Move-up homebuyers
 - Typically prefer to purchase newer, larger, and therefore more expensive single-family homes
 - Typically, families with children where householders are in their late 30's to 40's
- 4. Empty-nesters (persons whose children have grown and left home) and never-nesters (persons who never have children)
 - Prefer owning but will consider renting their housing
 - Some will move to alternative lower-maintenance housing products
 - Generally, couples in their 50's or 60's
- 5. Younger independent seniors
 - Prefer owning but will consider renting their housing
 - Will often move (at least part of the year) to retirement havens in the Sunbelt and desire to reduce their responsibilities for upkeep and maintenance
 - Generally, in their late 60's or 70's

6. Older seniors

- May need to move out of their single-family home due to physical and/or health constraints or a desire to reduce their responsibilities for upkeep and maintenance
- Generally single females (widows) in their mid-70's or older

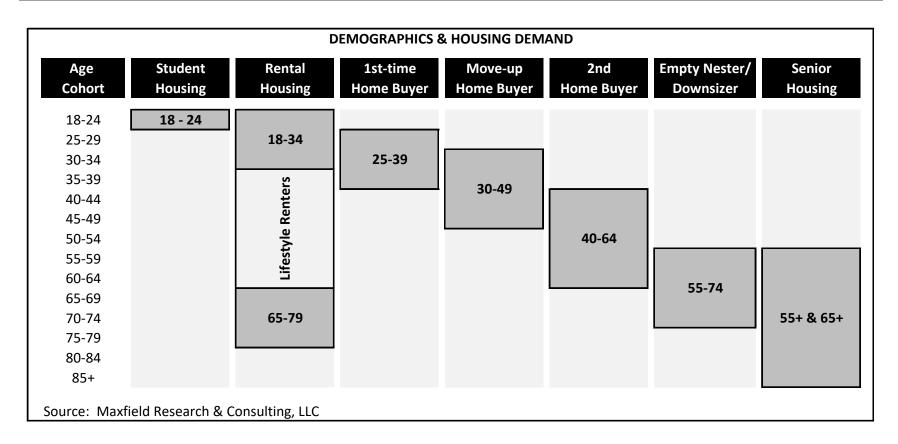

Demand for housing can come from several sources including: household growth, changes in housing preferences, and replacement need. Household growth necessitates building new housing unless there is enough desirable vacant housing available to absorb the increase in households. Demand is also affected by shifting demographic factors such as the aging of the population, which dictates the type of housing preferred. New housing to meet replacement need is required, even in the absence of household growth, when existing units no longer meet the needs of the population and when renovation is not feasible because the structure is physically or functionally obsolete.

The graphic on the following page provides greater detail of various housing types supported within each housing life cycle. Information on square footage, average bedrooms/bathrooms, and lot size is provided on the subsequent graphic.

Housing Demand Overview

The previous sections of this assessment focused on demographic and economic factors driving demand for housing in the Cambridge Market Area. In this section, we utilize findings from the economic and demographic analysis to calculate demand for new general occupancy housing units in Cambridge.

Housing markets are driven by a range of supply and demand factors that vary by location and submarket. The following points outline several of the key variables driving housing demand.

	TYPICAL HOUSING TYPE (TYPICAL HOUSING TYPE CHARACTERISTICS						
Housing Types	Target Market/ Demographic	Unit/Home Characteristics	Lot Sizes/ Units Per Acre ¹					
Entry-level single-family	First-time buyers: Families, couples w/no children, some singles	1,200 to 2,200 sq. ft. 2-4 BR 2 BA	80'+ wide lot 2.5-3.0 DU/Acre					
Move-up single-family	Step-up buyers: Families, couples w/no children	2,000 sq. ft.+ 3-4 BR 2-3 BA	80'+ wide lot 2.5-3.0 DU/Acre					
Executive single-family	Step-up buyers: Families, couples w/no children	2,500 sq. ft.+ 3-4 BR 2-3 BA	100'+ wide lot 1.5-2.0 DU/Acre					
Small-lot single-family	First-time & move-down buyers: Families, couples w/no children, empty nesters, retirees	1,700 to 2,500 sq. ft. 3-4 BR 2-3 BA	40' to 60' wide lot 5.0-8.0 DU/Acre					
Entry-level townhomes Move-up townhomes	First-time buyers: Singles, couples w/no children	1,200 to 1,600 sq. ft. 2-3 BR 1.5BA+	6.0-12.0 DU/Acre					
Move-up townhomes	First-time & step-up buyers: Singles, couples, some families, empty-nesters	1,400 to 2,000 sq. ft. 2-3 BR 2BA+	6.0-8.0. DU/Acre					
Executive townhomes/twinhomes	Step-up buyers: Empty-nesters, retirees	2,000+ sq. ft. 3 BR+ 2BA+	4.0-6.0 DU/Acre					
Detached Townhome	Step-up buyers: Empty-nesters, retirees, some families	2,000+ sq. ft. 3 BR+ 2BA+	4.0-6.0 DU/Acre					
Condominums	First-time & step-up buyers: Singles, couples, empty-nesters, retirees	800 to 1,700 sq. ft. 1-2 BR 1-2 BA	Low-rise: 18.0-24.0 DU/Acre Mid-rise: 25.0+ DU/Acre Hi-rise: 75.0+ DU/Acre					
Apartment-style rental housing	Singles, couples, single-parents, some families, seniors	675 to 1,250 sq. ft. 1-3 BR 1-2 BA	Low-rise: 18.0-24.0 DU/Acre Mid-rise: 25.0+ DU/Acre Hi-rise: 75.0+ DU/Acre					
Townhome-style rental housing Student rental housing	Single-parents, families w/children, empty nesters	900 to 1,700 sq. ft. 2-4 BR 2BA	8.0-12.0 DU/Acre					
Student rental housing	College students, mostly undergraduates	550 to 1,400 sq. ft. 1-4BR 1-2 BA	Low-rise: 18.0-24.0 DU/Acre Mid-rise: 25.0+ DU/Acre Hi-rise: 50.0+ DU/Acre					
Senior housing	Retirees, Seniors	550 to 1,500 sq. ft. Suites - 2BR 1-2 BA	Varies considerably based o senior product type					

Demographics

Demographics are major influences that drive housing demand. Household growth and formations are critical (natural growth, immigration, etc.), as well as household types, size, age of householders, incomes, etc.

Economy and Job Growth

The economy and housing market are intertwined; the health of the housing market affects the broader economy and vice versa. Housing market growth depends on job growth (or the prospect of); jobs generate income growth which results in the formation of more households and can stimulate household turnover. Historically low unemployment rates have driven both existing home purchases and new-home purchases. Lack of job growth leads to slow or diminishing

household growth, which in-turn relates to reduced housing demand. Additionally, low income growth results in fewer move-up buyers which results in diminished housing turnover across all income brackets.

Consumer Choice/Preferences

A variety of factors contribute to consumer choice and preferences. Many times a change in family status is the primary factor for a change in housing type (i.e., growing families, emptynest families, etc.). However, housing demand is also generated from the turnover of existing households who decide to move for a range of reasons. Some households may want to moveup, downsize, change their tenure status (i.e., owner to renter or vice versa), or simply move to a new location.

Supply (Existing Housing Stock)

The stock of existing housing plays a crucial component in the demand for new housing. There are a variety of unique household types and styles, not all of which are desirable to today's consumers. The age of the housing stock is an important component for housing demand, as communities with aging housing stocks have higher demand for remodeling services, replacement new construction, or new home construction as the current inventory does not provide the supply that consumers seek.

Pent-up demand may also exist if supply is unavailable as householders postpone a move until new housing product becomes available.

Housing Finance

Household income is the fundamental measure that dictates what a householder can afford to pay for housing costs. According to the U.S. Department of Housing and Urban Development (HUD), the definition of affordability is for a household to pay no more than 30% of its annual income on housing (including utilities). Families who pay more than 30% of their income for housing (either rent or mortgage) are considered cost burdened and may have difficulty affording necessities such as food, clothing, transportation and medical care.

Recent mortgage interest rate hikes from the Federal Reserve has resulted in tighter underwriting and leaving many buyers on the sidelines. Housing payments have increased by about 45% from early 2022 to 2023 just on interest rates alone.

Mobility

It is important to note that demand is somewhat fluid between Cambridge and the surrounding Isanti county geography's and will be impacted by development activity in nearby areas, including other communities outside of the Market Area. Much of the housing demand in a

community is generated by the turnover of existing households. Satisfying future demand will be highly dependent on the availability of suitable housing options in the community.

Estimated Demand for For-Sale Housing

Table HD-1 presents our demand calculations for general occupancy for-sale housing in the Cambridge Market Area between 2024 and 2035.

The 65 and older cohort is typically not a target market for new general occupancy for-sale housing, therefore, we limit demand from household growth to only those households under the age of 65. According to our projections, at a propensity to own of 83%, the Cambridge Market Area is expected to increase by 482 households under the age of 65 between 2024 and 2035.

Demand is forecast to emerge from existing Market Area householders through turnover. An estimated 9,518 owner-occupied households under age 65 are located in the Cambridge Market Area in 2024. Based on mobility data from the Census Bureau, an estimated 53% of owner households will turnover in a seven-year period, resulting in 5,026 existing households projected to turnover. Finally, we estimate 15% of the existing owner households will seek new for-sale housing, resulting in demand for 754 for-sale units through 2035. Combining demand from projected household growth (482 households) with demand from existing owner households (754 households) results in combined demand of 1,765 households.

Next, we estimate that 30% of the total demand for new for-sale units in the Cambridge Market Area will come from people currently living outside of the Market Area. A portion of this market will be former residents of the area, such as "snow-birds" heading south for the winters. Adding demand from outside the Cambridge Market Area to the existing demand potential, results in a total estimated demand for 1,765 for-sale housing units by 2035.

Based on land available, building trends, and demographic shifts (increasing older adult population), we project 75% of the for-sale owners will prefer traditional single-family product types while the remaining 25% will prefer a maintenance-free multi-family product (i.e., twinhomes, townhomes, detached townhomes, condominiums, etc.).

We then subtract the current identified platted lots that are available, under construction or approved. After subtracting the current lot supply in subdivisions (207 total single-family lots and 161 total multifamily lots)) we find total demand through 2035 resulting in 1,117 single-family lots and 280 multifamily lots.

Finally, we estimate that 40% of the excess single-family demand and 75% of the excess multifamily demand from the Cambridge Market Area demand could be captured in Cambridge. Therefore, total for-sale demand in Cambridge through 2035 is about 450 new single-family lots and 210 multifamily units.

² Pct. of owner households under the age of 65 (U.S. Census - 2022).

³ Estimate based on 2022 households under age 65 and ownership propensity.

 $^{^4}$ Based on on turnover from 2022 American Community Survey for households moving over an 7-year period.

⁵ Based on preference for housing type and land availability

⁶ Approved platted lot data does not account for the scattered lot supply which includes individual lots and lots in older non-marketing subdivisions.

^{*} Multi-family demand includes demand for townhomes, twinhomes, and condominium units.

Estimated Demand for General-Occupancy Rental Housing

Table HD-2 presents our calculation of general-occupancy rental housing demand in the Cambridge Market Area. This analysis identifies potential demand for rental housing that is generated from both new households and turnover households. A portion of the demand will be drawn from existing households in the Cambridge Market Area that want to upgrade their housing situations.

The 65 and older cohort is typically not a target market for new general occupancy rental housing, therefore, we limit demand from household growth to only those households under the age of 65. According to our projections, at an estimated 18.5% rental rate (adjusted up from 17% after all the rental housing planned and under construction is built), the Cambridge Market Area is expected to increase by 107 households under the age of 65 between 2024 and 2035.

Demand is forecast to emerge from existing Market Area householders through turnover. An estimated 2,100 renter-occupied households under age 65 are located in the Cambridge Market Area in 2024. Based on mobility data from the Census Bureau, an estimated 90% of renter households will turnover in 11-year period, resulting in 1,900 existing households projected to turnover. Finally, we estimate 22% of the existing renter households will seek new rental housing, resulting in demand for 420 rental units through 2035.

Next, we estimate that 30% of the total demand for new rental units in the Cambridge Market Area will come from people currently living outside of the Market Area. Adding demand from outside the Cambridge Market Area to the existing demand potential, results in a total estimated demand for about 750 rental housing units by 2035.

Based on a review of rental household incomes and sizes and monthly rents at existing projects, we estimate that approximately 15% of the total demand will be for subsidized housing (30% AMI), 15% will be for affordable housing (40% to 60% AMI), and 70% will be for market rate housing (non-income restricted).

Next we subtract housing projects that are under construction or pending, since these projects will satisfy some of the calculated demand for general occupancy rental housing. There are currently **345 pending market rate units**, **65 pending affordable units**, and no pending subsidized units. Subtracting these units at 95% occupancy leaves 128 market rate units, 38 affordable units, and 96 subsidized units.

Finally, we estimate that a site in Cambridge can capture 70% of market rate demand, 75% of affordable demand, and 85% of subsidized demand in the Market Area, resulting in demand for 88 subsidized units, 32 affordable units, and 98 market rate units in Cambridge.

Estimated Demand for Market Rate Active Adult Senior Housing

Table HD-3 presents our demand calculations for market rate active adult senior housing in the Cambridge Market Area in 2024 and 2035.

In order to determine demand for active adult senior housing, the potential market is reduced to those households that are both age and income qualified. The age-qualified market is defined as seniors aged 55 and older, although active adult living projects will primarily attract seniors aged 65 and older.

We calculate that the minimum income needed to afford monthly rents is \$35,000 or more plus homeowner households with incomes between \$25,000 and \$34,999 who would be able to supplement their incomes with the proceeds from a home sale. We estimate the number of age/income-qualified senior households in the Cambridge Market Area in 2024 to be 1,377 households.

Adjusting to include appropriate long-term capture rates for each age cohort (1.5% of households age 55 to 64, about 8.5% of households age 65 to 74, and 15% of households age 75 and over) results in a market rate demand potential for 362 active adult senior rental units in 2024.

Some additional demand will come from outside of the Cambridge Market Area. We estimate that 30% of the long-term demand for active adult senior housing will be generated by seniors currently residing outside the Cambridge Market Area. This demand will consist primarily of parents of adult children living in the Cambridge Market Area, individuals who live just outside of the Cambridge Market Area and have an orientation to the area, as well as former residents who desire to return. Together, the demand from the Cambridge Market Area seniors and demand from seniors who would relocate to the Cambridge Market Area results in a demand for 517 market rate active adult units in 2024.

Active adult demand in the Cambridge Market Area is apportioned between ownership and rental housing. Based on the age distribution, homeownership rates and current product available in the Cambridge Market Area, we project that 60% of the Cambridge Market Area's demand will be for adult ownership housing (181 units) and 40% will be for rental housing (336 units).

Next, we subtract existing competitive market rate units (minus a vacancy factor of 5% to allow for sufficient consumer choice and turnover) from the owner and rental demand. Subtracting the existing competitive market rate units results in total demand potential for 145 adult owner-occupied units and 154 active adult rental units. Finally, we estimate that 35% of the excess owner-occupied demand and 65% of the excess renter-occupied demand in the Cambridge Market Area demand could be captured in Cambridge , resulting in demand for 94 owner occupied units and 100 renter-occupied units in 2024.

Adjusting for inflation, we have estimated that households with incomes of \$40,000 or more and homeowners with incomes of \$30,000 to \$34,999 would income qualify for market rate

independent senior housing in 2035. Considering the growth in the older adult base and the income distribution of the older adult population in 2035, the methodology projected that demand will be 177 adult owner-occupied units and 214 adult rental units in the Cambridge Market Area. Accounting for the 35% of excess owner-occupied demand and 65% of excess renteroccupied demand capturable in Cambridge, results in demand for 115 owner occupied units and 139 renter-occupied units in 2035.

Estimated Demand for Subsidized/Affordable Active Adult Senior Housing

Table HD-4 presents our demand calculations for subsidized/affordable active adult senior housing in the Cambridge Market Area in 2024 and 2035.

In order to arrive at the potential age and income qualified base for low income and affordable housing, we exclude all senior (65+) households with incomes more than \$35,000. We exclude homeowner households with incomes between \$30,000 and \$34,999, as these households would have additional equity that could be converted to monthly income following the sales of their single-family homes.

Households in a need-based situation (either requiring services or financial assistance) more readily move to housing alternatives than those in non-need-based situations. Hence, the capture rate among each age group is higher than for market rate housing. Capture rates are employed at 1.5% for households age 55 to 64, 10.0% for households age 65 to 74 and 20.0% for households age 75 and older. This results in demand for 196 units in 2024.

An additional proportion is added for senior households that would move into affordable active adult housing in the Market Area who currently reside outside of the Market Area. Typically, the Market Area for affordable active adult is larger than that of market rate active adult. As a result, we estimate that seniors currently residing outside the Market Area will generate 35% of the demand for shallow/deep-subsidy active adult senior housing, increasing demand to 302 units.

Seniors in need-based situations are less selective when securing housing than those in non-need-based situations. We estimate that a high-quality site would capture a greater proportion of total demand for financially-assisted housing than for market rate housing. Of affordable units, we feel that 40% could be captured by subsidized units and the remaining 60% could be captured by shallow subsidy units.

Using the methodology described above results in a demand potential for 121 total subsidized and 181 affordable senior units in 2024. After subtracting existing affordable/subsidized active adult housing (no units) and adjusted for household incomes demand results in 91 subsidized units and 136 affordable units in the Market Area. Finally, we estimate that 75% of excess deep subsidy demand and 75% of excess shallow-subsidy demand in the Cambridge Market Area demand could be captured in Cambridge , resulting in demand for 91 owner occupied units and 136 renter-occupied units in 2024

Adjusting for inflation, we estimate that households with incomes up to \$40,000 would be candidates for financially-assisted independent housing in 2035. We reduce the potential market by homeowner households earning between \$35,000 and \$39,999 that would exceed incomerestrictions once equity from their home sales is converted to monthly income.

Following the same methodology, we project demand in the Cambridge Market Area for 109 subsidized units and 163 affordable units in 2035. Accounting for the 35% of excess subsidized demand and 35% of excess shallow-subsidy demand that capturable in Cambridge, results in demand for 109 subsidized units and subsidy units in 2035.

Estimated Demand for Independent Living Senior Housing

Table HD-5 presents our demand calculations for independent living housing in the Cambridge Market Area in 2024 and 2035.

The potential age- and income-qualified base for independent living senior housing includes all senior (65+) households with incomes of \$35,000 as well as homeowner households with incomes between \$30,000 and \$34,999 who would qualify with the proceeds from the sales of their homes. The proportion of eligible homeowners is based on the 2022 ACS homeownership rates of the Cambridge Market Area seniors. The number of age, income, and asset-qualified households in the Cambridge Market Area is estimated to be 1,395 households in 2024.

Demand for independent living is need-drive, which reduces the qualified market to only the portion of seniors who need some assistance. Adjusting to include appropriate capture rates for each age cohort (1.5% of households age 65 to 74 and 15.0% of households age 75 and older) results in a local demand potential for 169 independent living units in 2024.

We estimate that seniors currently residing outside of the Cambridge Market Area will generate 30% of the demand for independent living senior housing. Together, the demand from the Cambridge Market Area seniors and demand from seniors who are willing to locate to the Cambridge Market Area totals 241 independent living units in 2024.

Currently, there are 50 existing independent living units in the PMA. Subtracting these units, at 95% occupancy, results in overall demand for 193 independent living units in 2024 in the Market Area. Finally, we estimate that 65% of Cambridge Market Area independent living demand could be captured in the City of Cambridge, resulting in demand for 126 units in 2024.

Adjusting for inflation, we estimate that households with incomes of \$40,000 or more and senior homeowners with incomes between \$35,000 and \$39,999 would qualify for independent living housing in 2035. Following the same methodology, demand is calculated to increase to 248 units through 2035. Accounting for the 65% of demand capturable in Cambridge, results in demand for 161 independent units in 2035.

Source: Maxfield Research and Consulting LLC.

² The potential capture rate is derived from data from the Summary Health Statistics for the U.S. Population: National Health Interview Survey, 2018 by the U.S. Department of Health and Human Services. The capture rate used is the percentage of seniors needing assistance with IADLs, but not ADLs (seniors needing assistance with ADLs typically need assistance with multiple IADLs and are primary candidates for service-intensive assisted living).

³ Competitive units include Independent Living units at 95% occupancy (market equilibrium).

Estimated Demand for Assisted Living Housing

Table HD-6 presents our demand calculations for assisted living senior housing in the Cambridge Market Area in 2024 and 2035. This analysis focuses on the potential *private* pay/market rate demand for assisted living units.

The availability of more intensive support services such as meals, housekeeping and personal care at assisted living facilities usually attracts older, frailer seniors. According to the 2009 Overview of Assisted Living (which is a collaborative research project by the American Association of Homes and Services for the Aging, the American Seniors Housing Association, National Center for Assisted Living, and National Investment Center for the Seniors Housing and Care Industry), the average age of residents in freestanding assisted living facilities was 87 years in 2008. Hence, the age-qualified market for assisted living is defined as seniors ages 75 and over, as we estimate that of the half of demand from seniors under age 87, almost all would be from seniors over age 75. In 2024, there are a projected 2,652 seniors aged 75 and older in the Cambridge Market Area.

Demand for assisted living housing is need-driven, which reduces the qualified market to only the portion of seniors who need assistance. According to a study completed by the U.S. Census Bureau (1999 panels of the Survey of Income and Program Participation (SIPP) files), 30% of seniors needed assistance with everyday activities (from 25.5% of 75-to-79-year-olds, to 33.6% of 80-to-84-year-olds and 51.6% of 85+ year olds). Applying these percentages to the senior population yields a potential assisted living market of 911 seniors in the Cambridge Market Area.

Due to the supportive nature of assisted living housing, most daily essentials are included in monthly rental fees, which allow seniors to spend a higher proportion of their incomes on housing with basic services. Therefore, the second step in determining the potential demand for assisted living housing in the Cambridge Market Area is to identify the income-qualified market based on a senior's ability to pay the monthly rent. We consider seniors in households with incomes of \$40,000 or greater to be income-qualified for assisted living senior housing in the Cambridge Market Area. Households with incomes of \$40,000 could afford monthly assisted living fees of \$3,000 by allocating 90% of their income toward the fees.

According to the 2009 Overview of Assisted Living, the average arrival income of assisted living residents in 2008 was \$27,260, while the average annual assisted living fee was \$37,281 (\$3,107/month). This data highlights that seniors are spending down assets to live in assisted living and avoid institutional care. Thus, in addition to households with incomes of \$40,000 or greater, there is a substantial base of senior households with lower incomes who income-qualify based on assets – their homes, in particular.

For each age group in Table HD-5, we estimate the income-qualified percentage to be all seniors in households with incomes above \$40,000 (who could afford monthly rents of \$3,000+ per month) plus 40% of the estimated seniors in homeowner households with incomes below

\$40,000 (who will spend down assets, including home-equity, in order to live in assisted living housing). This results in a total potential market of 553 units in 2024.

Because the vast majority of assisted living residents are single (88% according to the 2009 Overview of Assisted Living), our demand methodology multiplies the total potential market by the percentage of seniors age 75+ in the Cambridge Market Area living alone. Based on 2010 Census data, only 46% of age 75+ households in the Cambridge Market Area lived alone. Applying this percentage results in a total base of 257 age/income-qualified singles. The 2009 Overview of Assisted Living found that 12% of residents in assisted living were couples. There is a total of 292 age/income-qualified seniors needing assistance in the Cambridge Market Area including both couples and singles.

We estimate that roughly 60% of the qualified market needing significant assistance with Activities of Daily Living ("ADLs") would either remain in their homes or less service-intensive senior housing with the assistance of a family member or home health care or would need greater care provided in a skilled care facility. The remaining 40% could be served by assisted living housing. Applying this potential market penetration rate of 40% results in demand for 117 assisted living units in 2024.

We estimate that a portion of demand for assisted living units (30%) will come from outside of the Cambridge Market Area. Applying this figure results in total potential demand for 167 market rate assisted living units in the Cambridge Market Area.

There are a total of 118 market rate assisted living units in the Cambridge Market Area. After deducting these competitive units (minus a 93% occupancy rate) from the total demand potential, we calculate that there is current demand for 57 assisted living units in the Cambridge Market Area in 2024. After applying the aforementioned calculations to the age/income-qualified base in 2035, results in demand for 69 units.

Of Cambridge Market Area independent living demand, 65% could be captured in the City of Cambridge, resulting in demand for 37 units in 2024 and 69 units in 2035.

Additional demand could come from seniors that will need to receive supplemental income in order to afford assisted living or memory care housing. While some of these seniors will receive income from the sales of their homes, others will need to rely on other sources of public aid. The Elderly Waiver program has provided public funding for seniors who wish to receive "alternative" care that allows them to stay in the community as opposed to receiving similar care at a nursing home.

Most assisted living developments require residents to have lived in their facility for a certain amount of time before they can use a waiver, and many try to limit the number of waivers accepted within the community to around roughly 10% to 20%. Some facilities accept higher amounts of residents on waivers and many newer facilities do not accept any waivers.

³ The 2009 Overview of Assisted Living (a collaborative project of AAHSA, ASHA, ALFA, NCAL & NIC) found that 12% of assisted living residents are couples.

⁴ We estimate that 60% of the qualified market needing assistance with ADLs could either remain in their homes or reside at less advanced senior housing with the assistance of a family member or home health care, or would need greater care provided in a skilled

⁵ Existing and pending units at 93% occupancy.

Estimated Demand for Memory Care Senior Housing

Table HD-7 presents our demand calculations for market rate memory care senior housing in the Cambridge Market Area in 2024 and 2035.

Demand is calculated by starting with the estimated Cambridge Market Area senior (age 65+) population in 2024 and multiplying by the incidence rate of Alzheimer's/dementia among this population's age cohorts. According to the Alzheimer's Association (Alzheimer's Disease Facts and Figures, 2007), 2% of seniors ages 65 to 74, 19% of seniors ages 75 to 84, and 42% of seniors ages 85+ are inflicted with Alzheimer's Disease. This yields a potential market of 734 seniors in the Cambridge Market Area in 2024.

Because of the staff-intensive nature of dementia care, typical monthly fees for this type of housing are at least \$4,000 and range upwards of \$5,000 to \$6,000 when including service packages. Based on our review of senior household incomes in the Cambridge Market Area, homeownership rates and home sale data, we estimate that 56% of seniors in the Cambridge Market Area would have incomes and/or assets to sufficiently cover the costs of memory care housing. This figure takes into account married couple households where one spouse may have memory care needs and allows for a sufficient income for the other spouse to live independently. Multiplying the number of seniors with Alzheimer's/dementia by the income-qualified percentage results in a total of 409 age/income-qualified seniors in the Cambridge Market Area in 2024.

According to data from the National Institute of Aging, about 25% of all individuals with memory care impairments comprise the market for memory care housing units. This figure considers that seniors in the early stages of dementia will be able to live independently with the care of a spouse or other family member, while those in the later stages of dementia will require intensive medical care that would only be available in skilled care facilities. Applying this figure to the estimated population with memory impairments yields a potential market of about 102 seniors in the Cambridge Market Area.

We estimate that 30% of the overall demand for memory care housing would come from outside of the Cambridge Market Area. Together, demand totals 146 memory care units in 2024. We reduce the demand potential by accounting for the existing memory care product in the Cambridge Market Area. There are a total of 78 units; however, we reduce the competitive units to include memory care units at a 7% vacancy rate. Subtracting these competitive units results in a demand for 78 units.

The same calculations are applied to the age/income-qualified base in 2035. Following the same methodology, potential demand for market rate memory care units is expected to increase to 93 units in the Cambridge Market Area through 2035.

Of Cambridge Market Area memory care demand, 75% could be captured in the City of Cambridge, resulting in demand for 59 units in 2024 and 93 units in 2035.

² Includes seniors with income at \$60,000 or above (\$65,000 in 2035) plus a portion of homeowners with incomes below this threshold (who will spend dow assets, including home-equity, in order to live in memory care housing.

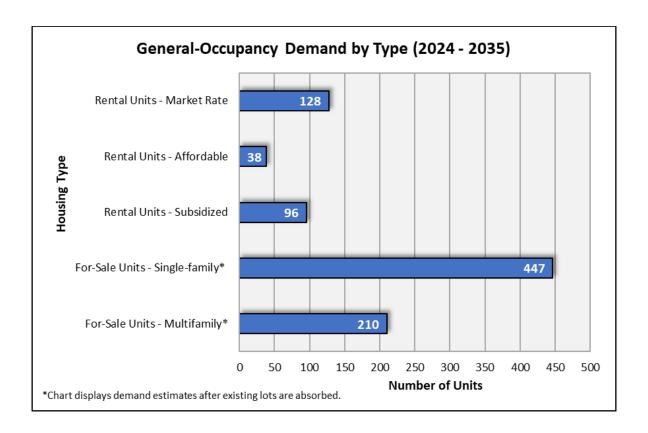

³ Existing memory care units at 7% vacancy rate.

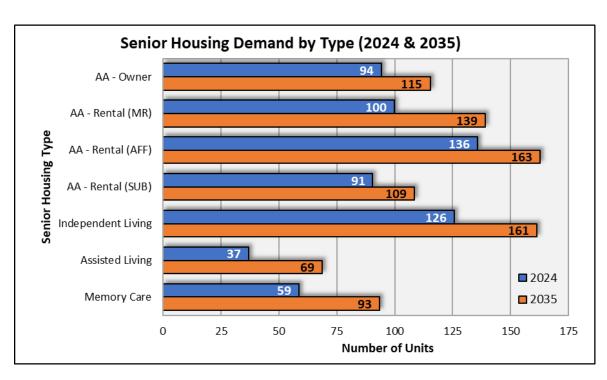

Introduction

Based on the finding of our analysis and demand calculations, Table CR-1 below provides a summary of housing demand in the PMA and Cambridge through 2035. As the table illustrates, demand exists in Cambridge for a variety of product types. The following section summarizes housing concepts and housing types that will be demanded from various target markets. It is important to note that not all housing types will be supportable and that the demand illustrated in Table CR-1 may not directly coincide with housing development due to a variety of factors (i.e. economies of scale, infrastructure capacity, land availability, etc.).

Based on the findings of our analysis and demand calculations, Table CR-2 provides a summary of recommended development concepts by product type for Cambridge. It is important to note that these proposed concepts are intended to function as a development guide to effectively meet the housing needs of existing and future households in Cambridge. The recommended development types do not directly coincide with total demand as illustrated in Table CR-1.

² Affordablity subject to income guidelines per Minnesota Housing Finance Agency (MHFA). See Table HA-1 for Isanti County Income limits.

³ Subsized housing will be difficult to develop financially. Hence, some demand moved from subsidized to affordable

⁴ Alternative development concept is to combine active adult affordable and market rate active adult into mixed-income senior communities.

For-Sale Housing Recommendations

Single-Family Housing

Table HD-1 identified demand for nearly 450 single-family housing units in Cambridge through 2035. The lot supply benchmark for growing communities is a three- to five-year lot supply, which ensures adequate consumer choice without excessively prolonging developer-carrying costs. According to Table FS-8 and our research, given the number of existing vacant developed platted lots in Cambridge and the number of homes constructed annually, the current lot supply appears to be sufficient only in the short-term. Although there are some scattered, infill lots throughout the City of Cambridge in older neighborhoods, many of these lots are undesirable to today's buyers as they are unable to accommodate specific product types.

Due to the price of the existing housing stock (and slightly older) in Cambridge, most of the existing older housing stock appeals to entry-level buyers. Entry-level homes, which we generally classify as homes priced under \$300,000 will be mainly satisfied by existing single-family homes as residents of existing homes move into newer housing products built in the Cambridge Area, such as move-up single-family homes, twinhomes, rental housing and senior housing. A move-up buyer or step-up buyer is typically one who is selling one house and purchasing another one, usually a larger and more expensive home. Usually the move is desired because of a lifestyle change, such as a new job or a growing family. Based on our interviews with real estate professionals, move-up homes are generally priced from the low \$300s to \$475,000 or more. Although demand is strong for entry-level new construction, it will be difficult to construct new homes for much less than \$300,000 given today's development costs. Executive-level homes are loosely defined as those homes priced above \$500,000. Most of these homes would be build-to-suit new construction in one of the city's newer subdivisions are on larger acreages located outside or near city limits.

Much of the new single-family construction in Cambridge and the surrounding townships has targeted move-up and executive buyers (pricing \$350,000+); in part because of the high infrastructure costs in developing new subdivisions and increasing construction, material, and labor costs. However, through our research we find demand for a variety of price points of new single-family homes.

Although there would be substantial demand for a new single-family housing product priced under \$300,000, financially it will be difficult to develop even with public assistance due to infrastructure costs and rising labor and material costs.

In the short-term, new construction in Cambridge is expected to slow given high interest rates. However, long term the market for new construction in Cambridge will be high given the housing costs are much more affordable than Metro Area communities. The pandemic has pushed housing demand out from the core and ex-urban and tertiary markets such as Cambridge and Isanti County will be in strong demand for more affordably priced housing costs and the ability of households to work remotely.

For-Sale Multifamily Housing

A growing number of households desire alternative housing types such as townhouses, detached townhomes, villas, and twinhomes. Typically, the target market of for-sale multifamily housing is empty-nesters and retirees seeking to downsize from their single-family homes. In addition, professionals, particularly singles and couples without children, also will seek townhomes if they prefer not to have the maintenance responsibilities of a single-family home. In many housing markets, younger households also find purchasing multifamily units to be generally more affordable than purchasing new single-family homes.

Based on the changing demographics and the need for alternative housing types, demand was calculated for up to 210 new multifamily for-sale lots/units in Cambridge through 2035 (after subtracting 161 vacant multifamily lots — resulting in a demand for roughly 330 units in Cambridge before the vacant lots were subtracted). Given the aging of the population (especially those 65+), desire for association-maintained housing (and affordability); Cambridge is expected to see an increased demand for attached housing or association-maintained product types. We recommend offering both one-level and two-story townhome units; however two-story units could also have the option for a master suite on the main level. According to our research and interviews, there are a number of one-level villas being constructed but not much attached housing that is more affordable.

The following provides greater detail into several for-sale multifamily housing products.

• Twinhomes— By definition, a twin home is basically two units with a shared wall with each owner owning half of the lot the home is on (also referred to as a duplex). Some one-level living units are designed in three-, four-, or even six-unit buildings in a variety of configurations. The swell of support for twin home and one-level living units is generated by the aging baby boomer generation, which is increasing the numbers of older adults and seniors who desire low-maintenance housing alternatives to their single-family homes but are not ready to move to service-enhanced rental housing (i.e., downsizing or right sizing). Housing products designed to meet the needs of these aging Cambridge residents, many of whom desire to stay in their current community if housing is available to meet their needs, will be needed into the future. Based on our windshield survey of Cambridge, there are very few twin home units in the current housing stock.

Twinhomes are also a preferred for-sale product by builders throughout the Twin Cities area and outstate Minnesota as units can be developed as demand warrants. Because twinhomes bring higher density and economies of scale to the construction process, the price point can be lower than stand-alone single-family housing with similar finishing's and square footage. Many two-story townhomes cater to professionals, smaller families, and younger seniors while one-level living townhomes cater to the 55+ age cohorts and often feature at least 1,400 square feet or more on the main level.

Because twinhomes have some of the lowest densities among multifamily housing types, this product would likely be constrained to the outer limits of Cambridge due to land requirements that make it hard to develop closer to Downtown; unless infill sites were zoned appropriately for twinhome construction.

• Detached Townhomes/Villas – An alternative to the twin home is the one-level villa product and/or rambler. This product also appeals mainly to baby boomers and empty nesters seeking a product similar to a single-family living on a smaller scale while receiving the benefits of maintenance-free living. Many of these units are designed with a walk-out or lookout lower level if the topography warrants. We recommend lot widths ranging from 45 to 55 feet with main level living areas with at least 1,450 square feet. The main level living area usually features a master bedroom, great room, dining room, kitchen, and laundry room while offering a "flex room" that could be another bedroom, office, media room, or exercise room. However, owners should also be able to purchase the home with the option to finish the lower level (i.e., additional bedrooms, game room, storage, den/study, etc.) and some owners may want a slab-on-grade product for affordability reasons. Finally, builders could also provide the option to build a two-story detached product that could be mixed with the villa product.

Although there are no new construction villas developed at this time, this product type has been successfully developed in Cambridge in the past decade. Pricing for a detached townhome/villa will vary based on a slab-on-grade home versus a home with a basement. Base pricing will fluctuate based on custom finishes, upgrades, etc., however pricing will likely need to be near \$300,000 or more given today's high construction costs.

Side-by-Side and Back-to-Back Townhomes – This housing product is designed with three or four or more separate living units in one building and can be built in a variety of configurations. With the relative affordability of these units and multi-level living, side-by-side and back-to-back townhomes have the greatest appeal among entry-level households without children, young families, and singles and/or roommates across the age span. However, two-story townhomes would also be attractive to middle-market, move-up, and empty-nester buyers. Many of these buyers want to downsize from a single-family home into maintenance-free housing, many of which will have equity from the sale of their single-family home.

We recommend side-by-side units, which tend to appeal to a slightly broader market, including older adults and retirees as well as younger families with children. Side-by-side units (or rowhomes) have increased density and could provide higher returns on investment to builders/developers that would spread out the costs of infrastructure. Association-maintained townhomes and/or rowhomes can have lot widths ranging from 22' to 35'.

Side-by-side townhomes would be attractive to a variety of first-time and move-up buyers. Because of the growth in the older population, two-story units should be designed with the option of a master suite on the main level. Side-by-side townhomes command the highest

density among the various townhome products and would be the recommended concept for Cambridge.

General Occupancy Rental Housing Recommendations

Our competitive inventory identified that the vacancy rates for all types of general occupancy rental product are below market equilibrium as of February 2024. Across all rental income product types the vacancy rate is only 1.6% in Cambridge, a balanced vacancy rate is considered 5% hence the current market is under supplied. As illustrated in the NOAH analysis, nearly all of the existing rental housing stock is "affordable" at either 50% or 60% AMI. However, the growing renter base is seeking newer rental properties with additional and updated amenities that are not offered in older development and that is evident in the number of apartments in the development pipeline.

Maxfield Research calculated demand for about 750 rental housing units in the PMA through 2035, including 550 in the City of Cambridge. However, there are a number of apartment projects under construction in both Cambridge and Isanti, hence the demand is reduced to account for the number of projects expected to delivery soon. After subtracting out units in the pipeline, demand in Cambridge is reduced to 128 market rate, 38 affordable, and 96 subsidized rental housing units in Cambridge through 2035. Based on our analysis and significantly low vacancy rates, demand could be even higher to meet market equilibrium of 5%.

• Market Rate Rental – Since 2013 Cambridge has seen the construction of nine new rental developments and many more units are under construction at the time of this study. Given the number of recently completed projects in the absorption period and new projects expected to deliver, we do not recommend any new rental housing in the short-term until the existing projects have leased and reached stabilized occupancy (95% occupied). Because new projects often take years to bring from concept to completion, new projects today may not deliver until 2026 at which time the market should reach stabilized occupancies from the newest rental projects.

We recommend a mix of moderate market rate housing with rents ranging from \$850 to \$1,300 per month and move-up rental housing with rents ranging from roughly \$975 to \$1,500 per month. We recommend a move up rental project with roughly 50 to 60 units and a move up rental project with 30 to 40 units.

Average rents in Cambridge are approximately \$1.37 per square foot. Therefore, both the recommended concepts will command a rent premium compared to some of the older rental housing stock. New market rate rental units should be designed with contemporary amenities that include open floor plans, higher ceilings, in-unit washer and dryer, full appliance package, central air-conditioning, and garage parking.

- Market Rate General Occupancy Rental Townhomes— In addition to the recommended apartment project(s), we find that demand exists for some larger townhome units for families including those who are new to the community and want to rent until they find a home for purchase. An additional 25 to 35 rental townhome units could be supported in Cambridge, potential more should elevated interest rates persist keeping buyers on the sidelines. We recommend a project with rents of approximately \$1,800 for larger two-bedroom units to \$2,250 for three-bedroom units. Units should feature contemporary amenities (i.e., in-unit washer/dryer, high ceilings, etc.) and an attached two car garage.
- Affordable General Occupancy Rental Apartments and Townhomes— There is one 65-unit affordable housing project under construction in Cambridge and this project has been subtracted from the demand calculations in HD-2. We find that demand exists for another 38 affordable units through 2035. In addition, we find additional demand for another 96 subsidized units. As a result, we recommend a 50- to 60-unit moderate-income affordable apartment-style development, a 30 to 35 moderate-income townhome development, and a 30 to 40 subsidized development. However, the subsidized project is nearly impossible to financing today so these units could be reapportioned to affordable housing later in the decade.

Units should feature central air conditioning, full appliance package, in-unit washer/dryer, an attached one/two car garage. Such development could assist in drawing more families to the community that cannot find affordable housing options through ownership or market rate rental in the surrounding area.

We believe the addition of the rental developments suggested above will further provide sufficient housing choices in the City and will continue to serve the needs of households that live and/or currently work in Cambridge.

Senior Housing Recommendations

As illustrated in Table CR-1, demand exists for nearly all senior housing product types in the PMA and the City of Cambridge. Development of additional senior housing is recommended in order to provide housing opportunity to these aging residents in their stages of later life. The development of additional senior housing serves a two-fold purpose in meeting the housing needs in Cambridge: older adult and senior residents are able to relocate to new age-restricted housing in Cambridge, and existing homes and rental units that were occupied by seniors become available to other new households. Hence, development of additional senior housing does not mean the housing needs of younger households are neglected; it simply means that a greater percentage of housing need is satisfied by housing unit turnover. The types of housing products needed to accommodate the aging population base are discussed individually in the following section.

Market Rate Active Adult Rental – Demand was projected for about 139 market rate active
adult rental units in Cambridge through 2035. Currently, there are four market rate rental
active adult products in Cambridge, Roosevelt Garden Estates, Grace Pointe Crossing Village
Townhomes, GracePointe Crossing Mill Ridge Terrace, Riverwood Village. It is likely there
are seniors who currently reside in general-occupancy housing that would consider a newer
active adult rental product.

Development of this product could be in a separate stand-alone facility or in a mixed-income project. A mixed-income building could include a portion of units that would be affordable to seniors with incomes established the Minnesota Housing Finance Agency. Although demand is strong for this sector, this senior demographic is also a target for all-ages general occupancy rental housing and this target market is not always ready to sell their home until product is available that meets their needs. Given the few options for home buyers today, seniors can take advantage of a low supply housing market and sell their homes quickly

We recommend 100 to 120 market rate active adult units consisting of one-bedroom, two-bedroom, and two-bedroom plus den units. Units should range from \$1,900 to \$2,900 a month.

<u>Affordable (shallow-subsidy) Rental</u> – Demand was calculated for about 163 units of affordable senior housing in Cambridge through 2035. There is currently only one affordable development in Cambridge that is age restricted, Ashland Place Apartments. Presently, a senior renters have to find affordable units within the limited supply of affordable general occupancy rental units in Cambridge or look elsewhere in other communities in the surrounding area.

Affordable senior housing will likely be a low-income tax credit project through the Minnesota Housing Finance Agency. Affordable senior housing products can also be incorporated into a mixed income building which may increase the projects financial feasibility. We recommend a total of 130 to 140 affordable active adult units; likely across several projects.

<u>For-Sale Active Adult</u> – There is one senior age-restricted for-sale development in Cambridge at this time, East Terrace Cooperative, which has 38 units and no units available at this time. Maxfield Research and Consulting, LLC projected demand for 115 active adult ownership units through 2035.

Maxfield Research & Consulting, LLC recommends a cooperative development with a mix of one-, two-, and three-bedroom units with share costs starting around \$75,000. The cooperative model, in particular, appeals to a larger base of potential residents in that it has characteristics of both rental and ownership housing. Cooperative developments allow prospective residents an ownership option and homestead tax benefits without a substantial upfront investment as would be true in a condominium development or life care option.

Maxfield Research & Consulting, LLC has found the cooperative model to be very well-accepted in rural communities across the Midwest.

Due to the lack of association-maintained housing options in Cambridge, demand will be strong for a variety of for-sale products beyond senior cooperatives (such as villas, cottages, twin homes, etc.)

• <u>Independent Living</u>— Demand was calculated for about 161 independent living units through 2035 in Cambridge. There is only one independent living property in Cambridge, GracePointe Crossing: The Terrace. As a result, many seniors may stay in their homes due to the lack of independent senior housing or leaving Cambridge to find suitable housing in other communities. A new independent living senior housing could be developed as part of a continuum of care project or in a stand-alone development. We suggest that a new independent living project comprise a mix of one- and two-bedroom units with base rents ranging from\$1,900 to \$2,900.

Meals and other support and personal care services will be available to independent living residents on a fee-for-service basis, such as laundry, housekeeping, etc. When their care needs increase, residents also have the option of receiving assisted living packages in their existing units.

Due to economies of scale needed for independent living housing, other service levels may have to be combined to the project to increase density to be financially feasible. Alternatively, the concept called "Catered Living" may be viable as it combines independent and assisted living residents and allows them to age in place in their unit versus moving to a separate assisted living facility. (See the following for definition of Catered Living).

- I'm OK program;
- Daily noon meal;
- Regularly scheduled van transportation;
- Social, health, wellness and educational programs;
- 24-hour emergency call system; and
- · Complimentary use of laundry facilities.

•

In addition, meals and other support and personal care services will be available to congregate residents on a fee-for-service basis, such as laundry, housekeeping, etc. When their care needs increase, residents also have the option of receiving assisted living packages in their existing units.

<u>Assisted Living and Memory Care Senior Housing</u> – Based on our analysis, we project demand to support an additional 69 assisted living units and 93 memory care units in Cambridge through 2035. Cambridge has three existing assisted living (Rosewood Senior Living, GracePointe Crossing: Commons Assisted Living, and Elmhurst Commons), and two

memory care facilities (Grace Pointe Crossing: Arbor Memory Care). Assisted living and memory care units each have high vacancy rates at 17.8% (21 vacant units) and 57.5% (42 vacant units), respectively. With the high vacancy rates, we do not recommend any new product in the short-term as demand will increase as seniors age through this decade.

Given the existing supply of assisted living, we recommend only 40 to 50 assisted living in the 2028 or later. The unit mix for assisted living units should be studios, one-bedroom, and two-bedroom units with base monthly rents ranging from \$3,000 to \$4,750. Memory care demand was slightly higher than assisted living units and we recommend 50 to 60 units in 2026 or later (across several projects). Memory care unit mix should be studios and one-bedroom units with base monthly rents ranging from \$4,000 to \$6,000. Memory care units should be located in a secured, self-contained wing located on the first floor of a building and should feature its own dining and common area amenities including a secured outdoor patio and wandering area.

The base monthly fees should include all utilities (except telephone and basic cable/satellite television) and the following services:

- Three meals per day;
- Weekly housekeeping and linen service;
- Two loads of laundry per week;
- Weekly health and wellness clinics;
- Meal assistance;
- Regularly scheduled transportation;
- Professional activity programs and scheduled outings;
- Nursing care management;
- I'm OK program;
- 24-hour on site staffing;
- Personal alert pendant with emergency response; and
- Nurse visit every other month.

Additional personal care packages should also be available for an extra monthly charge above the required base care package. A care needs assessment is recommended to be conducted to determine the appropriate level of services for prospective residents.

Given the service-intensive nature of memory care housing and staffing ratios, typically most memory care facilities are attached to either an assisted living development or are a component of a skilled nursing facility. As a result, it will be difficult to build a stand-along memory care facility that can be financially feasible on its own. Therefore, new memory care units would be best suited if they were attached to an assisted living complex. Alternatively, memory care could also be associated with a skilled nursing facility; however, we stress the residential approach to memory care versus the institutional feel from a nursing home.

Although we do not recommend new assisted living at this time, new assisted living units could be incorporated into an existing senior housing facility or could be designed in a "Catered Living" concept outlined below.

Challenges and Opportunities

The following were identified as the greatest challenges and opportunities for developing the recommended housing types.

• Accessory Dwelling Units ("ADU"): Accessory dwelling units ("ADUs") go by several different names such as: In-law suites, garage apartments, backyard cottages, granny flats, guest houses, etc. An ADU is simply a small, stand-alone residential dwelling unit located on the same property as a detached single-family home. However, in some cases an ADU could include an addition on an existing home, apartment over a garage, or be locating within an attic or basement within the home. Legally, however, an ADU is still a part of the original parcels PID number and title is with the property owner. The most common reason for building an ADU is generating rental income for the homeowner or housing a family member (often for free).

Because of increased density on the property and smaller sized units, ADUs have the potential to increase housing affordability and create a wider range of housing options. Many communities that permit ADUs in their zoning code limit the number of accessory structures to just one; however, some cities have recently revised their zoning code to allow up to two accessory structures. Some communities monitor ADU construction by limiting new construction to only owner-occupied housing units (main structure is owned), minimum lot size, setbacks, and number of occupants or bedrooms in the accessory structure.

Maxfield Research recommends that local planning departments review their existing zoning code and if not already permitted, revise zoning codes to ensure ADUs can be a permitted use. Since the pandemic, the demand for ADUs has continued to increase as many homeowners have sought to move family members together in a multi-generational environment. Also, some homeowners design the ADU as a multifunctional space as a home office and living space.

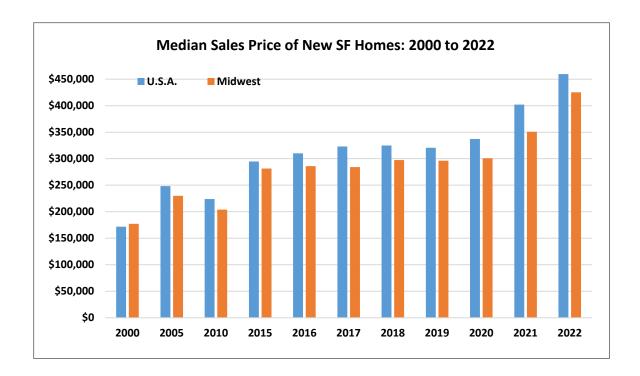

• Affordable Housing/Naturally Occurring Affordable Housing (NOAH). Tables HA-1 and HA-2 identified the Isanti County median Incomes ("AMI") and the fair market rents by bedroom type. Table R-7 and R-8 summarized market rate rental communities by AMI by bedroom type. As illustrated in Table R-8, all of the existing market rate rental product in Cambridge is affordable to households earning less than 80% AMI. Most of the older market rate rental stock is affordable at 50% AMI. At the same time however, rents have been increasing faster than incomes over the few years and the affordability gap is slowly widening from year-to-year and the number of cost burdened households is increasing. Because NOAH housing provides the vast majority of affordable housing to renters; we recommend a proactive approach to maintaining affordability within the existing housing stock. Dollar for dollar, preservation of NOAH units yields a much higher number of affordable units vs. new construction under the LIHTC program. Given the number of new rental units in the

development pipeline and target market, the percentage of NOAH units is expected to decline as newer market rate project attracts higher-income renters.

- Aging Population/Aging Boomers. As illustrated in Table D-4, there was significant growth between 2010 and 2020 in in the younger senior population in Cambridge and the PMA (+57.8% and 47.5%) respectively. Over the next five years senior growth remains strong with the addition of 1,040 seniors. In addition, Table D-9 shows homeownership rates among seniors 65+ is approximately 81% in 2022. High homeownership rates among seniors indicate there could be lack of senior housing options, or simply that many seniors prefer to live in their home and age in place. Aging in place tends to be higher in rural vs. urban settings as many rural seniors do not view senior housing as an alternative retirement destination but a supportive living option only when they can no longer live independently. Rural areas also tend to have healthier seniors and are also more resistant to change. Because of these demographic and social dimensions, new senior housing development (specifically independent living with light services) in Cambridge could experience a longer lease-up period as seniors in the region are less reluctant to move from their current home to senior housing living.
- Builders. The Cambridge and Isanti County new construction market has historically been dominated by smaller, local builders and contractors vs. regional builders or production builders that are located in the Twin Cities Metro Area. Across the Metro Area, 71% of the market share in 2021 was completed by the top ten builders. The following chart summarizes the differences between production, custom, and spec builders. Production builders have increased their market share since the Great Recession in the Twin Cities and across the country, in part because competitors defaulted on lots and homes and smaller builders have gone out of business, while production builders were able to acquire land holdings for a fraction of the original cost to develop. The production builders have also driven new home activity from the development side as land developers are unable to absorb lot development costs for open builder developments. Because Isanti County lacks volume builders, housing development is unable to take advantage of larger economies of scale that can bring down the retail cost of the home.

BUILDER TYPES & CHARACTERISTICS								
Land	Production Builder Typically built on land owned by the builder/developer. Most production builders develop all of the homes within the subdivisions they plat and develop.	Custom Builder Built on land purchased by the home buyer or builder. Most custom buiders do not develop the land/lots.	Spec Builder Built on land purchased by the builder. Builder "speculates" they will build and sell a home prior to finding a buyer.					
Home Plans	Stock floor plans; however buyers have home style and upgrade options that have been pre-selected by builder.	One-of-a-kind house. Site specific and customized for a specific client.	Home plan per builder. If home sells early during construction phase; buyers have some ability to customize the home.					
Volume	Varies based on builder. There are national and regional production builders.	Typically less than 20 or 25 per year.	Varies.					
Pricing	Generally build for a variety of price points from entry-level, move-up, and executive.	Tend to cater to move-up or exective-level buyers.	Varies. Most spec homes are entry-level or modest homes. However, spec homes can range across all price points.					
Advantages	Lower costs per square foot, homes can be built quicker, fewer decisions for home owners.	Personal service, more creative control, customizable, more flexible, buyer may have more land options.	Lower cost floor plans provides economies of scale. Homes can also be completed relatively fast.					
Disadvantages	Few modifications or change orders, fewer options, lot selection based on availability of builder.	Price per square foot is higher, more time to build, signficantly more decision time needed from buyers.	Most of the decisions have already been made and buyer may have fewer options.

• Construction & Development Costs. The cost to build and develop new single-family housing has increased significantly over the past decade and since the Great Recession in all markets across the U.S.A., as seen in the chart below. New construction pricing peaked in the 2000s between 2005 and 2007 before falling during the recession. Pricing in nearly every market across the United States decreased between 2008 and 2011 before starting to rebound in 2012 and beyond. However, since the Great Recession it has become increasingly difficult for builders to construct entry-level new homes due to a number of constraints – rising land costs, rising material and labor costs, lack of construction labor, and increasing regulation and entitlement fees. As a result, affordable new construction homes have become rare as builders are unable to pencil-out modestly priced new construction. New construction in Cambridge is difficult to achieve under \$350,000. At the same time, new construction pricing is at an all-time high coming out of the pandemic due to strong demand and supply and labor constraints for builders that are driving up housing costs.

• **COVID-19 Impacts.** The COVID-19 pandemic has had both direct and indirect effects on the housing industry. The senior housing industry was directly impacted as the virus affected older adults at a much higher rate. Senior properties hit record high vacancy rates and many seniors continue to age in place as long as possible as they have avoided living in a shared space. At the same time, many ex-urban communities and counties benefit from the pandemic-related housing boom.

Historically, the unemployment rate in Isanti County has been slightly higher than the State of Minnesota, but lower than US. Trends. Prior the pandemic in early 2020, the unemployment rate in Isanti County was 5.5%, before jumping to 10.9% in May 2020. The unemployment rate began to settle down by May 2021 when it was just 3.9%. For most of 2023, the Isanti County unemployment rate was under 4%.

Despite the pandemic impacts over the past four years, the local real estate market has performed above expectations and strong demand remains for housing. Supply remains at an all-time low, yet pricing is remaining steady (but some appreciation) due few homes for sale. The pandemic has changed buyer preferences; both internally and externally. Buyers have a greater desire for outdoor features, green space, more square footage, flexible spaces for home offices, and healthy living conditions. Buyers are also trading location for more home by locating further from their place of employment; benefiting tertiary markets such as Cambridge and Isanti County. There is also a preference toward new construction and the new home market has been strong since 2020 as builders have not kept the pace with demand.

On the rental side, social distancing initially had an impact on common corridor apartment buildings as all communal areas were shut down and tenants could not utilize amenities. Since the pandemic, the demand for smaller unit sizes has waned as renters desire larger spaces as they work from home, utilize for fitness, etc. With telecommuting and work from home being the norm tenants are seeking a separation of work and live spaces as well as access to balconies and patios to provide fresh air and extra space. There has been strong demand for townhome-style rentals or a building that has been designed with a separate entrance to eliminate the possible of interacting with others and catching the virus. These trends and preferences will likely continue as the pandemic has waned.

- Housing Programs. Many communities and local Housing and Redevelopment Authorities
 (HRAs) offer programs to promote and preserve the existing housing stock. In addition,
 there are various regional and state organizations that assist local communities enhance
 their housing stock. Generally, we find very few housing programs available in Cambridge
 and Isanti County. We recommend implementing even a few housing programs to assist
 new development or enhance the existing housing stock. The following is a sampling of po tential programs that could be explored.
 - 4d Affordable Housing Tax Incentive Offers rental property owners a 40% tax rate reduction and limited grant assistance for units that remain affordable for ten years. Property owners can invest the savings into updating and maintaining their naturally occurring affordable housing units.
 - Architectural Design Services The local government authority (City, HRA, etc.) partners with local architects to provide design consultation with homeowners. Homeowner pays a small fee for service, while the City/public entity absorbs the majority of the cost. No income restriction.
 - <u>Construction Management Services</u> Assist homeowners regarding local building codes, reviewing contractor bids, etc. Typically provided as a service by the building department. This type of service could also be rolled into various remodeling related programs.
 - Density Bonuses Since the cost of land is a significant barrier to housing affordability, increasing densities can result in lower housing costs by reducing the land costs per unit.
 Municipalities can offer density bonuses as a way to encourage higher-density residential development while also promoting an affordable housing component.
 - <u>Fast Track Permitting</u> Program designed to reduce delays during the development process that ultimately add to the total costs of housing development. By expediting the permitting process costs can be reduced to developers while providing certainty into the development process. Typically, no-cost to the local government jurisdiction.

- Heritage/Historic Preservation Encourage residents to preserve historic housing stock in neighborhoods with homes with character through restoring and preserving architectural and building characteristics. Typically funded with low interest rates on loans for preservation construction costs.
- Home Improvement Area (HIA) HIAs allow a townhome or condo association low interest loans to finance improvements to communal areas. Unit owners repay the loan through fees imposed on the property, usually through property taxes. Typically, a "last resort" financing tool when associations are unable to obtain traditional financing due to the loss of equity from the real estate market or deferred maintenance on older properties.
- Home-Building Trades Partnerships Partnership between local Technical Colleges or High Schools that offer building trades programs. Affordability is gained through reduced labor costs provided by the school. New housing production serves as the "classroom" for future trades people to gain experience in the construction industry.
- Home Sale Point of Sale City ordinance requiring an inspection prior to the sale or transfer of residential real estate. The inspection is intended to prevent adverse conditions and meet minimum building codes. Sellers are responsible for incurring any costs for the inspection. Depending on the community, evaluations are completed by either city inspectors or third-party licensed inspectors.
- Housing Fair Free seminars and advice for homeowners related to remodeling and home improvements. Most housing fairs offer educational seminars and "ask the expert" consulting services. Exhibitors include architects, landscapers, building contractors, home products, city inspectors, financial services, among others.
- Home Energy Loans Offer low interest home energy loans to make energy improvements in their homes.
- Household and Outside Maintenance for the Elderly (H.O.M.E.) Persons 60 and over receive homemaker and maintenance services. Typical services include house cleaning, grocery shopping, yard work/lawn care, and other miscellaneous maintenance requests.
- o <u>Infill Lots</u> The City or HRA purchase blighted or substandard housing units from willing sellers. After the home has been removed, the vacant land is placed into the program for future housing redevelopment. Future purchasers can be builders or the future owner-occupant who has a contract with a builder. Typically, all construction must be completed within an allocated time period (one year in most cases).
- <u>Land Banking</u> Land Banking is a program of acquiring land with the purpose of developing at a later date. After a holding period, the land can be sold to a developer (often at a price lower than market) with the purpose of developing affordable housing.

- <u>Land Trust</u> Utilizing a long-term 99-year ground lease, housing is affordable as the land is owned by a non-profit organization. Subject to income limits and targeted to workforce families with low-to-moderate incomes. If the family chooses to sell their home, the selling price is lower as land is excluded.
- Realtor Forum Typically administered by City with partnership by local school board. Inform local Realtors about school district news, current development projects, and other marketing factors related to real estate in the community. In addition, Realtors usually receive CE credits.
- Remodeling Tours City-driven home remodeling tour intended to promote the enhancement of the housing stock through home renovations/additions. Homeowners open their homes to the public to highlight home improvements.
- Rental Collaboration City organizes regular meetings with owners, property managers, and other stakeholders operating in the rental housing industry. Collaborative, informational meetings that includes city staff, updates on economic development and real estate development, and updates from the local police, fire department, and building inspection departments.
- Rent to Own Income-eligible families rent for a specified length of time with the endgoal of buying a home. The HRA saves a portion of the monthly rent that will be allocated for a down payment on a future house.
- Shallow Rent Subsidy: The HRA funds a shallow rent subsidy program to provide program participants living in market rate rentals a rent subsidy (typically about \$100 to \$300 per month).
- <u>Tax Abatement</u>: A temporary reduction in property taxes over a specific time period on new construction homes or home remodeling projects. Encourages new construction or rehabilitation through property tax incentives.
- Tax Increment Financing (TIF): Program that offers communities a flexible financing tool to assist housing projects and related infrastructure. TIF enables communities to dedicate the incremental tax revenues from new housing development to help make the housing more affordable or pay for related costs.
- Transfer of Development Rights Transfer of Development Rights (TDR) is a program that shifts the development potential of one site to another site or different location, even a different community. TDR programs allow landowners to sever development rights from properties in government-designated low-density areas and sell them to purchasers who want to increase the density of development in areas that local governments have selected as higher density areas.

- <u>Waiver or Reduction of Development Fees</u> There are several fees' developers must pay including impact fees, utility and connection fees, park land dedication fees, etc. To help facilitate affordable housing, some fees could be waived or reduced to pass the cost savings onto the housing consumer.
- Infill Lots. Infill refers to a parcel(s) of land which is surrounded by land that has already been developed. Infill development is new construction located on underutilized or vacant lots usually located in established neighborhoods of a community, such as the neighborhoods near Downtown Cambridge. Infill development can be challenging as enough parcels of land that are permissible land uses are typically required to be assembled to allow for a feasible building. Typically, the challenge is assembling all of the parcel owners to agree to sell and in a time period that makes economic sense to the buyer. Although Cambridge may have some infill lots available; however, many have tighter lot widths which require lot combinations in order to achieve a buildable lot. Many of these lots are priced lower than lots marketing in new subdivisions. As such, these lots are typically among the lowest price in a community.

Many communities have infill programs that are designed to enhance older neighborhoods or provide affordable homes for low- and moderate-income households. Infill programs are designed to facilitate the development of vacant lots in older neighborhoods that suit the character of the neighborhood. Some cities provide pre-approved floor plans that meet building criteria on smaller lots sizes. Other communities have infill programs that provide incentives to encourage developers to build affordable housing within targeted neighborhoods. Such incentives include free land for qualified builders/developers, deferred or waived impact fees, and funding assistance.

- Inflation. U.S. inflation rates hit a new 40-year high of nearly 9% in 2022, the biggest yearly increase since December 1981. Rampant price increased for nearly every good and service and specifically energy and food costs are having an impact on American consumers and will eventually affect housing affordability. As a result, the Federal Reserve is implementing interest rate hikes and increasing borrowing costs to hopefully offset a recession. As interest rates have increased for-sale housing demand has slowed and demand for rental housing has increased. This has resulted in higher housing costs for both buyers and renters. Housing assets are in higher demand during inflationary times as real estate values tend to hedge inflation and investors seek out rental housing assets as equity continues to grow. In the short term, household balance sheets will continue to be stretched as rising costs affect Cambridge area residents. This could hinder housing production in the near term as new construction will be difficult to pencil. Finally, the high inflation of homeowners insurance is having a major impact on housing affordability as many homeowners are facing premium increases of 20% or more.
- **Job Growth/Employment.** The Covid-19 pandemic created a number of new challenges for businesses, workers, and government. These unprecedented challenges had an economic ripple effect across the country as thousands of Americans found themselves out of work

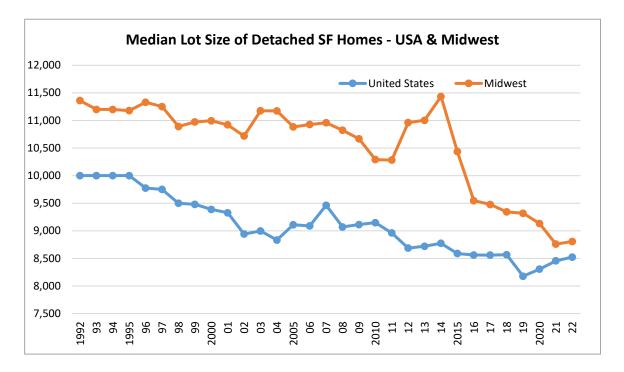

with increases in unemployment. As depicted earlier, the unemployment rate in Isanti County has historically been higher than the State of Minnesota, but lower than the U.S. averages. Unemployment peaked at nearly 11% during the pandemic shutdowns, but by early 2021 began to fall under 5% and have remained rather tight since

Although the unemployment rate remains low, the labor force has not come back to the 2020 employment numbers prior to the pandemic. Although a low unemployment rate is generally considered positive news, a low unemployment rate and declining labor force can be challenging for employers looking to add additional staff. Many employers find that the local labor force is tapped out in terms of skilled employees and attracting new talent to the area has been challenging. In part, employee recruitment has been challenging due to a tight housing market and the lack of an availability as supply in either the for-sale market or rental market has been significantly low.

- Lifestyle Renters. Historically, householders rented because they couldn't afford to buy or didn't have the credit to qualify for a mortgage. Today that is no longer the case, and many householders are renting by choice. High-income renters represent the fastest growing market segment of the rental market today; having grown 48% over the past decade. Demand is being driven by the Millennials, would-be buyers on the side-lines (due to high sales prices and mortgage rates), and empty nesters. As a result, rental housing is one of the preferred real estate asset classes today across country. Lifestyle renters are attracted to developments offering excellent finishing quality, extensive common area facilities, and typically focus on an environment providing a more social experience.
- Lot Size: Across Minnesota, the Midwest, and the U.S. there has been a growing trend of lot size compression for decades and especially since the Great Recession of last decade. As illustrated in the chart below, the median lot size of a new single-family detached home in the United States sold in 2019 dropped to its smallest size since the Census Bureau has been tracking lot sizes. Nationwide median lot sizes have dropped below 8,200 square feet (0.19 acres) before increasing in 2021 and 2022 from the pandemic. At the same time, lot sizes decreased in the Midwest to the lowest levels recorded in 2021, down about 15% from 2010.

Lot sizes have decreased in part due to increasing raw land prices, lot prices, and rising regulatory and infrastructure costs (i.e. curb and gutter, streets, etc.). As a result, builders and developers have reduced lot sizes in an effort to increase density and absorb higher land development costs across more units. Many newer single-family subdivisions across the Greater Twin Cities Metro Area have lot widths of about 65 to 75 feet, down from the standard width of 80 to 90 feet prior to the Great Recession. Because many local governments have larger minimum lot size requirements, the cost of housing continues to rise as developers and buyers may be required to purchase a lot this is larger than they prefer. Table FS-6 shows 52% of new lots in the Greater Twin Cities have lot widths of 60 to 79 feet; whereas many lots in Cambridge that closed this past year were over 100' wide. In an

effort to curb rising costs, we recommend compressing lot sizes for new construction to help alleviate costs and maintain affordability.

- Lot Supply. Tables FS-9 and FS-10 inventoried active subdivisions with available lots. Based on our research, there are anywhere from 100 to 120 vacant developed lots at the time of this report (excluding scattered or infill-lots). Historically Cambridge is averaging about 33 new single-family homes per year since 2010, therefore the current lot supply is able to support demand in the very short-term. Therefore, additional lots will be needed immediately to meet future housing demand. Given the time to develop finished lots with infrastructure, developers and builders need to be platted new subdivisions now to meet future housing needs.
- Mobility/Outstate Minnesota Lifestyle and Image: The COVID-19 pandemic fundamentally changed the housing industry and mobility has been at all-time highs since the pandemic. According to Pew Research, 20% of American's moved during the pandemic. Housing suddenly became more than a place to sleep, but the home office, school, gym, and place of entertainment. Generally, households used the pandemic and the work-from-home movement to flee high-cost housing markets and relocated to more affordable housing markets. Mobility trends showed the movement away from urban core neighborhoods or Metro Areas to the suburbs, exurbs, and rural areas. Households moved to lesser denser populated areas, lower tax states, sought larger homes and yards, and traded-up due to the lower cost of housing.

Many communities outside of the Twin Cities experienced strong growth as remote work made the movement to small towns and the "country" viable which was once led by

proximity to the office. Outstate Minnesota returnees are often motivated to live closer to family and friends, smaller schools to raises children, slower pace of life, outdoor activities, and finally more affordable housing stock compared to their previous place of residence. It is estimated that families with children accounted for the highest percentage of household types that have moved to smaller cities.

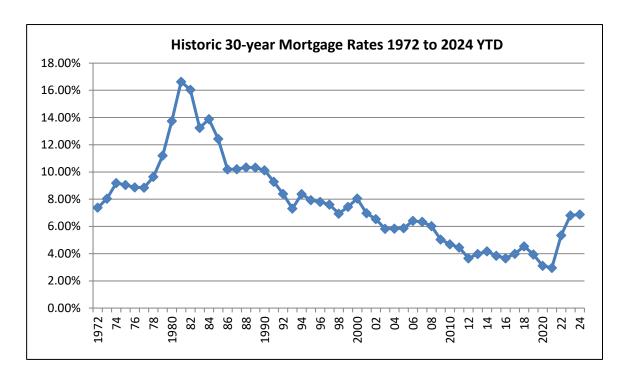

A recent study released in March 2024 shows that across the U.S. the average distance between the employer and the employer increased by 2.7x driven by hybrid and work form home employment options. The movement away from the place of employment is being led by Millennials and often targeting higher-paying professionals that have the option to work remotely or hybrid. Given Cambridge's proximity to the Metro Area and northern Minnesota recreational amenities, Cambridge is well-positioned to capture household growth that traditionally may have located closer into the Twin Cities core. We recommend marketing strategies on branding Cambridge's lifestyle, amenities, and more affordable housing stock.

Modular Housing. Modular housing, often referred to as prefab housing, is the construction of housing units in a controlled factory-like setting or on a manufacturers site or lumber yard. Modular housing is gaining steam from developers and investors to combat high construction costs, labor shortages, and speed-up the construction timeline. The biggest advantage modular housing provides is time and shaving months of holding costs off the consumer's bottom line. Originally modular housing was mostly single-family oriented; however, developers are now constructing entire apartment buildings, hotels, senior living, man camps, and college dorms. Historically the biggest challenge of modular housing is transportation, shipping costs, and perception. Modular housing has made huge strides over the decades and are now built on concrete foundations or include basements. The industry continues to battle the stigma of the older mobile homes as the appraisal community continually mis-appraises modular homes due to biases or lack of education on the product. Maxfield Research believes there is opportunity in the modular construction sector that can be utilized in Cambridge, providing a win-win scenario by providing housing production and passing cost savings along to consumers. Modular plants are located in Detroit Lakes, Owatonna, and one is planned along the I-94 corridor between the Twin Cities and St. Cloud.

If not already so, we recommend that the City revise zoning codes to allow for this type of housing if it is not permitted. However, design standards should be enforced in order to ensure incompatible housing does not deter neighborhoods.

• Mortgage Rates. Mortgage rates play a crucial part in housing affordability. Lower mortgage rates result in a lower monthly mortgage payment and buyers receiving more home for their dollar. Rising interest rates often require homebuyers to raise their down payment in order to maintain the same housing costs. Mortgage rates have stayed at historic lows for most of the past decade trending under 4.5% (30-year fixed) since around 2010. At the on-set of the COVID-19 pandemic, rates plummeted to at or near an all-time low under 3%

for part of 2020 and most of 2021. However, due to a 40-year high inflation the Federal Reserve began hiking rates in 2022 to slow the economy and curtail inflation. The Federal Reserve has implemented 11 rate hikes over the past two years. As a result, the cost of forsale housing has increased significantly, and many would-be-buyers are on the sidelines and have been priced out of the market. Compared to early in 2022, mortgage payments in Winter of 2024 are on average about 65% higher than the beginning of 2022 (3.25% vs. near 7%). As a result, affordability has been crushed and a housing market reset is in play. The following charts illustrates historical mortgage rate averages as compiled by Freddie Mac. The Freddie Mac Market Survey (PMMS) has been tracking mortgage rates since 1972 and is the most relied upon benchmark for evaluating mortgage interest market conditions. The Freddie Mac survey is based on 30-year mortgages with a loan-to-value of 80%.

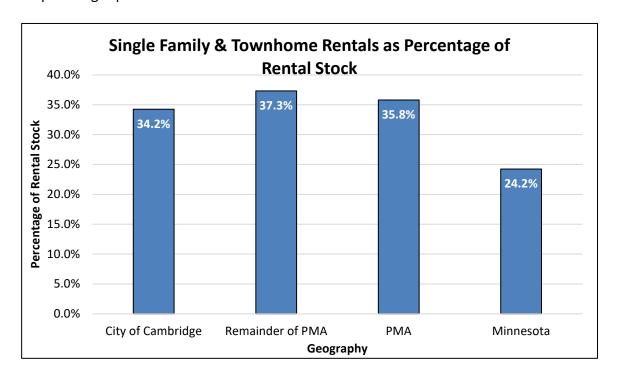

• Private/Public Partnerships ("PPP"). Private/public partnerships are a creative alliance formed to achieve a mutual purpose and goal. Partnerships between local jurisdictions, the private sector, and nonprofit groups can help communities develop housing products through collaboration that otherwise may not materialize. Private sector developers can benefit through greater access to sites, financial support, and relaxed regulatory processes. Public sectors have increased control over the development process, maximize public benefits, and can benefit from and increased tax base.

A number of communities have solved housing challenges through creative partnerships in a variety of formats. Many of these partnerships involve numerous funding sources and stakeholders. Because of the difficulty financing infrastructure costs, it will likely require innovative partnerships to stimulate housing development.

• Single-Family Rental Housing Demand. Table HC-5 showed that 27% of the rental housing inventory in Cambridge in 2021 is within single-unit housing structures. Another 11% of units were located within an attached structure such a townhome or twin home. Nationwide, it is estimated that 25 of the 43 million rental households in the United States (58%) reside in both single-family rentals, townhomes, duplexes, triplexes, and quads. Single-family units, townhomes, and condos make-up about 34% of all rental units in the country, 23% in the Twin Cities Metro Area, and 27% in the State of Minnesota. About 36% of all rental units in the Market Area are comprised of lower-density rentals.

A recent study by Freddie Mac identified the market share of single-family rentals ("SFR") by ownership type across the country. The study found that 88% of SFR are owned by investors with between 1 and 10 homes. Institutional investors make-up only 1% of the market share today; even though they are they have the financial backing and are able to acquire larger portfolios.

Demand is strong for SFR by providing renter lifestyle choice and the ability to reside in a detached unit without having to obtain the funds for a down payment on a mortgage. Many single-family renters may consider purchasing; however, the rising costs of real estate and the down payment requirements hinder some renters from making the leap to home ownership. The COVID-19 pandemic increased demand for SFR as renters desire more square footage, green space/yards, separate entrances, and more privacy than traditional multifamily structures.

Single-family rental communities have been one of the hottest real estate products to come out of the pandemic over the past few years. Although Minnesota is behind the rest of the country, there are several developments in the pipeline or that have recently been completed in the Twin Cities. We recommend exploring purpose-built single-family rental communities or townhomes in the City of Cambridge and zoning codes that permit the project concept.

.

APPENDIX

Definitions

<u>Absorption Period</u> – The period of time necessary for newly constructed or renovated properties to achieve the stabilized level of occupancy. The absorption period begins when the first certificate of occupancy is issued and ends when the last unit to reach the stabilized level of occupancy has signed a lease.

<u>Absorption Rate</u> – The average number of units rented each month during the absorption period.

Active Adult (or independent living without services available) — Active Adult properties are similar to a general-occupancy apartment building, in that they offer virtually no services but have age-restrictions (typically 55 or 62 or older). Organized activities and occasionally a transportation program are usually all that are available at these properties. Because of the lack of services, active adult properties typically do not command the rent premiums of more service-enriched senior housing.

<u>Adjusted Gross Income "AGI"</u> – Income from taxable sources (including wages, interest, capital gains, income from retirement accounts, etc.) adjusted to account for specific deductions (i.e., contributions to retirement accounts, unreimbursed business and medical expenses, alimony, etc.).

<u>Affordable Housing</u> – The general definition of affordability is for a household to pay no more than 30% of their income for housing. For purposes of this study we define affordable housing that is income-restricted to households earning at or below 80% AMI, though individual properties can have income-restrictions set at 40%, 50%, 60% or 80% AMI. Rent is not based on income but instead is a contract amount that is affordable to households within the specific income restriction segment. It is essentially housing affordable to low or very low-income tenants.

<u>Amenity</u> – Tangible or intangible benefits offered to a tenant in the form of common area amenities or in-unit amenities. Typical in-unit amenities include dishwashers, washer/dryers, walk-in showers and closets and upgraded kitchen finishes. Typical common area amenities include detached or attached garage parking, community room, fitness center and an outdoor patio or grill/picnic area.

<u>Area Median Income "AMI"</u> – AMI is the midpoint in the income distribution within a specific geographic area. By definition, 50% of households earn less than the median income and 50% earn more. The U.S. Department of Housing and Urban Development (HUD) calculates AMI annually and adjustments are made for family size.

<u>Assisted Living</u> – Assisted Living properties come in a variety of forms, but the target market for most is generally the same: very frail seniors, typically age 80 or older (but can be much younger, depending on their particular health situation), who are in need of extensive support

services and personal care assistance. Absent an assisted living option, these seniors would otherwise need to move to a nursing facility. At a minimum, assisted living properties include two meals per day and weekly housekeeping in the monthly fee, with the availability of a third meal and personal care (either included in the monthly fee or for an additional cost). Assisted living properties also have either staff on duty 24 hours per day or at least 24-hour emergency response.

<u>Building Permit</u> – Building permits track housing starts, and the number of housing units authorized to be built by the local governing authority. Most jurisdictions require building permits for new construction, major renovations, as well as other building improvements. Building permits ensure that all the work meets applicable building and safety rules and is typically required to be completed by a licensed professional. Once the building is complete and meets the inspector's satisfaction, the jurisdiction will issue a "CO" or "Certificate of Occupancy." Building permits are a key barometer for the health of the housing market and are often a leading indicator in the rest of the economy as it has a major impact on consumer spending.

<u>Capture Rate</u> – The percentage of age, size, and income-qualified renter households in a given area or "Market Area" that the property must capture to fill the units. The capture rate is calculated by dividing the total number of units at the property by the total number of age, size and income-qualified renter households in the designated area.

<u>Comparable Property</u> – A property representative of the rental housing choices of the designated area or "Market Area" that is similar in construction, size, amenities, location and/or age.

<u>Concession</u> – Discount or incentives given to a prospective tenant to induce signature of a lease. Concessions typically are in the form of reduced rent or free rent for a specific lease term, or free amenities, which are normally charged separately, such as parking.

<u>Congregate (or independent living with services available)</u> – Congregate properties offer support services such as meals and/or housekeeping, either on an optional basis or a limited amount included in the rents. These properties typically dedicate a larger share of the overall building area to common areas, in part, because the units are smaller than in adult housing and in part to encourage socialization among residents. Congregate properties attract a slightly older target market than adult housing, typically seniors aged 75 or older. Rents are also above those of the active adult buildings, even excluding the services.

<u>Contract Rent</u> – The actual monthly rent payable by the tenant, including any rent subsidy paid on behalf of the tenant, to the owner, inclusive of all terms of the lease.

<u>Demand</u> – The total number of households that would potentially move into a proposed new or renovated housing project. These households must be of appropriate age, income, tenure and size for a specific proposed development. Components vary and can include, but are not limited to turnover, people living in substandard conditions, rent over-burdened households, income-qualified households and age of householder. Demand is project specific.

<u>Density</u> – Number of units in a given area. Density is typically measured in dwelling units (DU) per acre – the larger the number of units permitted per acre the higher the density; the fewer units permitted results in lower density. Density is often presented in a gross and net format:

<u>Gross Density</u> – The number of dwelling units per acre based on the gross site acreage. <u>Gross Density</u> = <u>Total residential units/total development area</u>

<u>Net Density</u> - The number of dwelling units per acre located on the site, but excludes public rights-of-way (ROW) such as streets, alleys, easements, open spaces, etc. <u>Net Density</u> = <u>Total residential units/total residential land area (excluding ROWs)</u>

<u>Detached Housing</u> – a freestanding dwelling unit, most often single-family homes, situated on its own lot.

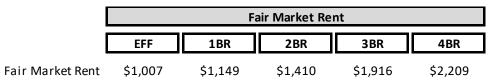

Effective Rents – Contract rent less applicable concessions.

<u>Elderly or Senior Housing</u> – Housing where all the units in the property are restricted for occupancy by persons aged 62 years or better, or at least 80% of the units in each building are restricted for occupancy by households where at least one household member is 55 years of age or better and the housing is designed with amenities, facilities and services to meet the needs of senior citizens.

<u>Extremely Low-Income</u> – Person or household with incomes below 30% of Area Median Income, adjusted for respective household size.

<u>Fair Market Rent</u> – Estimates established by HUD of the Gross Rents needed to obtain modest rental units in acceptable conditions in a specific geographic area. The amount of rental income a given property would command if it were open for leasing at any given moment and/or the amount derived based on market conditions that is needed to pay gross monthly rent at modest rental housing in a given area. This figure is used as a basis for determining the payment standard amount used to calculate the maximum monthly subsidy for families on at financially assisted housing.

Fair Market Rent Isanti County - 2023

Floor Area Ratio (FAR) Ratio of the floor area of a building to area of the lot on which the building is located.

<u>Foreclosure</u> – A legal process in which a lender or financial institute attempts to recover the balance of a loan from a borrower who has stopped making payments to the lender by using the sale of the house as collateral for the loan.

<u>Gross Rent</u> – The monthly housing cost to a tenant which equals the Contract Rent provided for in the lease, plus the estimated cost of all utilities paid by tenants. Maximum Gross Rents are shown in the figure below.

Gross Rent Isanti County – 2023

	Maximum Gross Rent					
	EFF	1BR	2BR	3BR	4BR	
30% of median	\$652	\$745	\$838	\$931	\$1,006	
50% of median	\$1,087	\$1,242	\$1,397	\$1,552	\$1,677	
60% of median	\$1,305	\$1,491	\$1,677	\$1,863	\$2,013	
80% of median	\$1,740	\$1,988	\$2,236	\$2,484	\$2,684	
100% of median	\$2,175	\$2,485	\$2,795	\$3,105	\$3,355	
120% of median	\$2,610	\$2,982	\$3,354	\$3,726	\$4,026	

<u>Household</u> – All persons who occupy a housing unit, including occupants of a single-family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements.

<u>Household Trends</u> – Changes in the number of households for any particular areas over a measurable period of time, which is a function of new household formations, changes in average household size, and net migration.

<u>Housing Choice Voucher Program</u> – The federal government's major program for assisting very low-income families, the elderly, and people with disabilities to afford decent, safe, and sanitary housing in the private market. A family that is issued a housing voucher is responsible for finding a suitable housing unit of the family's choice where the owner agrees to rent under the program. Housing choice vouchers are administered locally by public housing agencies. They receive federal funds from the U.S. Department of Housing and Urban Development (HUD) to administer the voucher program. A housing subsidy is paid to the landlord directly by the public housing agency on behalf of the participating family. The family then pays the difference between the actual rent charged by the landlord and the amount subsidized by the program.

<u>Housing Unit</u> – House, apartment, mobile home, or group of rooms used as a separate living quarters by a single household.

<u>HUD Project-Based Section 8</u> – A federal government program that provides rental housing for very low-income families, the elderly, and people with disabilities in privately owned and managed rental units. The owner reserves some or all of the units in a building in return for a

Federal government guarantee to make up the difference between the tenant's contribution and the rent. A tenant who leaves a subsidized project will lose access to the project-based subsidy.

<u>HUD Section 202 Program</u> – Federal program that provides direct capital assistance and operating or rental assistance to finance housing designed for occupancy by elder household who have incomes not exceeding 50% of Area Median Income.

<u>HUD Section 811 Program</u> – Federal program that provides direct capital assistance and operating or rental assistance to finance housing designed for occupancy of persons with disabilities who have incomes not exceeding 50% Area Median Income.

<u>HUD Section 236 Program</u> – Federal program that provides interest reduction payments for loans which finance housing targeted to households with income not exceeding 80% Area Median Income who pay rent equal to the greater or market rate or 30% of their adjusted income.

<u>Income Limits</u> – Maximum household income by a designed geographic area, adjusted for household size and expressed as a percentage of the Area Median Income, for the purpose of establishing an upper limit for eligibility for a specific housing program. See income-qualifications.

<u>Inflow/Outflow</u> – The Inflow/Outflow Analysis generates results showing the count and characteristics of worker flows in to, out of, and within the defined geographic area.

<u>Low-Income</u> – Person or household with gross household incomes below 80% of Area Median Income, adjusted for household size.

<u>Low-Income Housing Tax Credit</u> – A program aimed to generate equity for investment in affordable rental housing authorized pursuant to Section 42 of the Internal Revenue Code. The program requires that a certain percentage of units built be restricted for occupancy to households earning 60% or less of Area Median Income, and rents on these units be restricted accordingly.

<u>Market Analysis</u> – The study of real estate market conditions for a specific type of property, geographic area or proposed (re)development.

<u>Market Rent</u> – The rent that an apartment, without rent or income restrictions or rent subsidies, would command in a given area or "Market Area" considering its location, features and amenities.

<u>Market Study</u> – A comprehensive study of a specific proposal including a review of the housing market in a defined market or geography. Project specific market studies are often used by developers, property managers or government entities to determine the appropriateness of a

proposed development, whereas market specific market studies are used to determine what housing needs, if any, existing within a specific geography.

<u>Market Rate Rental Housing</u> – Housing that does not have any income-restrictions. Some properties will have income guidelines, which are minimum annual incomes required in order to reside at the property.

Memory Care — Memory Care properties, designed specifically for persons suffering from Alzheimer's disease or other dementias, is one of the newest trends in senior housing. Properties consist mostly of suite-style or studio units or occasionally one-bedroom apartment-style units, and large amounts of communal areas for activities and programming. In addition, staff typically undergoes specialized training in the care of this population. Because of the greater amount of individualized personal care required by residents, staffing ratios are much higher than traditional assisted living and thus, the costs of care are also higher. Unlike conventional assisted living, however, which deals almost exclusively with widows or widowers, a higher proportion of persons afflicted with Alzheimer's disease are in two-person households. That means the decision to move a spouse into a memory care facility involves the caregiver's concern of incurring the costs of health care at a special facility while continuing to maintain their home.

<u>Migration</u> – The movement of households and/or people into or out of an area.

<u>Mixed-Income Property</u> – An apartment property contained either both income-restricted and unrestricted units or units restricted at two or more income limits.

<u>Mobility</u> – The ease at which people move from one location to another. Mobility rate is often illustrated over a one-year time frame.

<u>Moderate Income</u> – Person or household with gross household income between 80% and 120% of the Area Median Income, adjusted for household size.

<u>Multifamily</u> – Properties and structures that contain more than two housing units.

<u>Naturally Occurring Affordable Housing</u> — Although affordable housing is typically associated with an income-restricted property, there are other housing units in communities that indirectly provide affordable housing. Housing units that were not developed or designated with income guidelines (i.e., assisted) yet are more affordable than other units in a community are considered "naturally-occurring" or "unsubsidized affordable" units. This rental supply is available through the private market, versus assisted housing programs through various governmental agencies. Property values on these units are lower based on a combination of factors, such as: age of structure/housing stock, location, condition, size, functionally obsolete, school district, etc.

<u>Net Income</u> – Income earned after payroll withholdings such as state and federal income taxes, social security, as well as retirement savings and health insurance.

<u>Net Worth</u> – The difference between assets and liabilities, or the total value of assets after the debt is subtracted.

<u>Pent-Up Demand</u> – A market in which there is a scarcity of supply and as such, vacancy rates are low or non-existent.

<u>Population</u> – All people living in a geographic area.

<u>Population Density</u> – The population of an area divided by the number of square miles of land area.

<u>Population Trends</u> – Changes in population levels for a particular geographic area over a specific period of time – a function of the level of births, deaths, and in/out migration.

<u>Project-Based Rent Assistance</u> – Rental assistance from any source that is allocated to the property or a specific number of units in the property and is available to each income eligible tenant of the property or an assisted unit.

Redevelopment – The redesign, rehabilitation or expansion of existing properties.

<u>Rent Burden</u> – Gross rent divided by adjusted monthly household income.

Restricted Rent – Rent charged under the restriction of a specific housing program or subsidy.

<u>Saturation</u> – The point at which there is no longer demand to support additional market rate, affordable/subsidized, rental, for-sale, or senior housing units. Saturation usually refers to a particular segment of a specific market.

<u>Senior Housing</u> – The term "senior housing" refers to any housing development that is restricted to people aged 55 or older. Today, senior housing includes an entire spectrum of housing alternatives. Maxfield Research Consulting, LLC. classifies senior housing into four categories based on the level of support services. The four categories are: Active Adult, Congregate, Assisted Living and Memory Care.

<u>Short Sale</u> – A sale of real estate in which the net proceeds from selling the property do not cover the sellers' mortgage obligations. The difference is forgiven by the lender, or other arrangements are made with the lender to settle the remainder of the debt.

<u>Single-Family Home</u> – A dwelling unit, either attached or detached, designed for use by one household and with direct street access. It does not share heating facilities or other essential electrical, mechanical or building facilities with another dwelling.

<u>Stabilized Level of Occupancy</u> – The underwritten or actual number of occupied units that a property is expected to maintain after the initial lease-up period.

<u>Subsidized Housing</u> – Housing that is income-restricted to households earning at or below 30% AMI. Rent is generally based on income, with the household contributing 30% of their adjusted gross income toward rent. Also referred to as extremely low-income housing.

<u>Subsidy</u> – Monthly income received by a tenant or by an owner on behalf of a tenant to pay the difference between the apartment's contract/market rate rent and the amount paid by the tenant toward rent.

<u>Substandard Conditions</u> – Housing conditions that are conventionally considered unacceptable and can be defined in terms of lacking plumbing facilities, one or more major mechanical or electrical system malfunctions, or overcrowded conditions.

<u>Target Population</u> – The market segment or segments of the given population a development would appeal or cater to.

<u>Tenant</u> – One who rents real property from another individual or rental company.

<u>Tenant-Paid Utilities</u> – The cost of utilities, excluding cable, telephone, or internet necessary for the habitation of a dwelling unit, which are paid by said tenant.

Tenure – The distinction between owner-occupied and renter-occupied housing units.

<u>Turnover</u> – A measure of movement of residents into and out of a geographic location.

<u>Turnover Period</u> – An estimate of the number of housing units in a geographic location as a percentage of the total house units that will likely change occupants in any one year.

<u>Unrestricted Units</u> – Units that are not subject to any income or rent restrictions.

<u>Vacancy Period</u> – The amount of time an apartment remains vacant and is available on the market for rent.

<u>Workforce Housing</u> – Housing that is income-restricted to households earning between 80% and 120% AMI; however, some government agencies define workforce housing from 50% to 120% AMI. Also referred to as moderate-income housing.

Zoning – Classification and regulation of land use by local governments according to use categories (zones); often also includes density designations and limitations.

Prepared by: Marcia Westover, Community Development Director

Background:

In addition to the sidewalk chalk contest, staff would like to add a street art contest. The street art contest would involve spray paint and white boards. The large white boards from the city owned parking lot (former Woody's lot) would be lowered for this and contestants would show off their best spray paint art to win a prize. After the event, our public works department would paint over the art to have blank boards again.

The Art Fair will be held on Saturday, August 17, 2024, from 10:00am to 3:00pm. The fair includes vendors, food trucks, and the chalk art contest. The street art contest will provide additional opportunities to grow the event.

Each contestant would get a section of the white board (size to be determined) to showcase their art. Rules would be enforced to include, but not limited to, no foul language, no obscene images.

Compatibility with Strategic Goals:

Events such as this are compatible with Core Strategy #5: Foster engaged, informed, and involved citizens and community, specifically: Host events that promote community connections, such as concerts, downtown events, and parks and recreation initiatives.

Fiscal Note:

The cost for the paint will be covered under the art fair line item already budgeted.

City Council Action:

Approve a street art contest for the Art Fair.
